Now this guy sees the real K1OIK:

Date: 10-09-95 (06:43) Number: 10326
From: LARRY ROLL Refer#: NONE
To: STEVEN HILDEBRAND Recvd: NO
Subj: Burt Fisher: The Legend! Conf: (10) HAM

Steve:

Burt does EVERYTHING better than everyone, don't you know that by now?
He's a one-man army, the hero of heroes, and a legend in his own mind!
I just hope I get a chance to meet him in person some day and see what
he's really like! But for now, all I can do is read his posts here
on Fidonet, where he graciously tells us of his overall superiority as
a human being, ham radio operator, lover, etc. and just dream about
being like Burt when I grow up!

I think Steven Spielberg should do a film all about the adventures of
Burt Fisher. Burt could be played by Harrison Ford, his wife by Anne
Archer. The screen play should be based on the upcoming novel by
Tom Clancy entitled "Burt Fisher...A Clear and Present Hero of the World!"
I can't wait...it should be quite entertaining to see how normal,
everyday people stumble around, trying to muddle through their pitifully
dull lives somehow, while Burt Fisher stands apart from them all, serving
as the shining example of perfection for all to emulate.

I think Burt should also have his own nationally syndicated radio talk
show, just like Rush Limbaugh or G. Gordon Liddy. Instead of the
"Excellence In Broadcasting Network" his show could run on the
"Overwhelming Superiority in Broadcasting" network.

Of course, Burt probably agrees with all of this. After all, a person
with all of Burt's qualities has no need for false modesty. And, it's
just as well...after all, how we know about all of Burt's fine qualities,
and our own shortcomings, if he didn't tell us of them!

Ah, yes...Burt Fisher...the man, the myth, the legend! Burt Fisher for
President? Naw...that's too lowly an office for him. We need to think
of something a lot better. Dictator? Chancellor? Fherer?

Hey Burt...I know you're reading this...how about an autographed picture?

73 de Larry, WR2F
President, Burt Fisher Fan Club

... I am Fisher of Borg...No Hams are good enough to be assimilated!

The root cause of this problem are the 'original' postings of one BURT FISHER.
His garbage gets replied to by others who inadvertently post to all the
newsgroups the original spammer included in the distribution list.

In the future forward a copy of spam messages from Burt Fisher to the
postmaster at his service provider. Fisher's address is:
k1oik@ccsnet.com therefore you can forward his crap back to place it came
from at postmaster@ccnet.com.

If enough of us do it he will get tired of it and take steps to stop it.
There is no need to even write anything on the forwarded message. They
know who Burt Fisher is, do you think your the first one to complain!? :)

I used to be shocked when my private electronic mail was published. About as shocked as my love letters being printed in a book. I find there are no morals in America, and no self discipline. Only a scum would resort to publishing a private letter. I used to put a little line in my signature that said PRIVATE, but then the scum just erased that part.

I'm glad you identified the scum who published your private mail. Said scum should be banished from the net. Write his postmaster.

Aside from being a processed nuclear survival food, spam has its own endearing definition as it related to the Internet.

"Spamming" is when a message is posted to serveral, even all, newsgroups at once. Prime examples of spamming occur when some goober posts a "Make 20 Zillion Dollars by Picking Your Nose" post to every single newsgroup in existence. Then, in each of those newsgroups 50 people post a response saying "I picked my nose and only made $.73 you &***#$%!!!!". Most usenet programs will then post that reply to every group the original post appeared in.

I notice that I am posting this response to all the rec.radio.xxx groups. Since I don't know where this thread originated, I'll leave it that way....and now I too have become a "spammer"!!!

Hope it is now clear as mud!

The spec is available from the RTCM. I am not sure what you are looking
for when you say a generic receiver? I have been finding that if the DGPS
receiver outputs RTCM104 it will work with any GPS that has a RTCM
port.

>just get my feet wet. I would appreciate any advice, recommendations,
>and an answer to my basic question, "How do I call 'CQ' during such a
>contest?".

Hi Marc,

Your basic question is easy to answer:

"Cq contest, cq contest, kilo charly seven juliet kilo fox contest"

Ant than you release the PTT.

Now, to spare you a serious disappointment, a few words of advice are
called for: If a contest station answers, they *expect* you to copy their
callsign correct first time, or at least in the event of QRM part of it.
And since they are likely to call slightly off frequency, you have to tweak
the RIT at the same time as you copy as much of a callsign *correctly*.

So this and the copying of the rest of the information needs to be done
quickly and accurately, as well as giving your details.
It is highly recomended (unless you can join a club station) to
listen to contest stations, copy down their details in peace,
get a feel of the operating procedures and than, when you hear
one that is not too busy throw in your call in good phonetics.

Have your details, such as running number and locator ready!
In fact it is a good idea to have your call and locator on a piece
of paper in front of you in case of a mental black out. It happens.

Good luck, Moritz DL5UH

2599. GB2RS News 26th November 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-23 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <817179136snx@llondel.demon.co.uk>
Source record: 235011
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 26th of November and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The RSGB Annual Meeting takes place on Saturday the 2nd of December at the Royal Society of Chemistry, New Burlington Place, London. Doors open at 12 noon and an RSGB book stall and buffet lunch will be available. The Annual General Meeting starts at 2.00 pm and members are asked to take their membership card along as proof of identity. Full details, including a map, are given in the Annual Report which was posted to all members with the November RadCom. Non-members are welcome to attend as observers.

A new GB2RS broadcast starts next Sunday, the 3rd of December, from the station of G1ZCW near Louth in Lincolnshire. The transmission is on 70 centimetres, channel SU21 at 10.00am. Although initially the broadcasts will be made with low power, this is an excellent site and is expected to give wide coverage. Reports either to G1ZCW or to the GB2RS Manager, Ian Kyle, GI8AYZ, would be much appreciated.

A new permanent special event station will be opened officially by RSGB President Clive Trotman, GW4YKL, at Bletchley Park next Sunday, the 3rd of December. The station, which has the callsign GB2BP, will be run jointly by the Bletchley Park Museum Trust and the Milton Keynes and District Amateur Radio Society.

The 2 metre beacon at Wrotham in Kent, GB3VHF, which operates on 144.925 MHz, returned to service on the 16th of November. It had been off the air for a month due to a failure of the electronic keyer.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

The CQ World Wide DX CW contest is taking place this weekend, and there are many DXpedition stations active on CW from rare locations.

From the American Virgin Islands, WP2AHW is active from now until Tuesday the 28th of December. After the CQ World Wide contest he will be active on CW on the LF and WARC bands.

From Panama, AA4LI will sign AA4LI/HP1 from Friday the 1st of December until the 17th of December. Activity will be mainly on CW.

And from Albania, ZA1NG is a newly-licensed station who will be active for at least a year. The operator was formerly TL8NG, and his QSL information is via WA1ECA.

Now news of some special event stations:

GB0KHL will be on the air from Kinnaird Head Lighthouse on Friday the 1st and Saturday the 2nd of December. The station will be operated by members of the Banff and District Amateur Radio Club and celebrates the anniversary of the first lighthouse being established at Kinnaird Head.

SP0TPAX is a special event station in Poland which will be on the air from the 1st to 15th of December. It commemorates the 70th anniversary of the first amateur radio contact in Poland which took place on the 6th of December 1925 between Tadeusz Heftman, whose callsign was TPAX, and Dutch amateur Ten Kate, NOPM. SP0TPAX will be active on all the HF bands on CW, SSB and RTTY.

Next the Rally News:

The West Manchester Radio Club is holding its winter "Red Rose Rally" at the Horwich Leisure Centre near Bolton today, Sunday the 26th of November.

The Bridgend and District Amateur Radio Club Rally also takes place today at the Bridgend Recreation Centre. RSGB Morse tests are available on demand and candidates are reminded to take two passport-size photographs and the appropriate fee. Doors open at 11.00 am, or 10.30 am for disabled visitors. Talk-in is on 2 metres channel S22.

The Verulam Amateur Radio Club rally takes place at the Watford Leisure Centre in Horseshoe Lane, Garston, near Watford next Sunday, the 3rd of December. The event features trade stands, a bring and buy stand and a grand raffle. Doors open at 10.00 am and further details may be obtained from Ian, G0PAU, on 01923 222284.

The Thames Valley Electronics Rally also takes place on the 3rd of December, at Kempton Park Racecourse, Sunbury on Thames, in Middlesex. This event features manufacturers and retailers, antenna supplies, a bring and buy stall, specialist groups, and computer and component retailers. Doors open at 10.30 am, and for further details ring 01494 450504.

The first Portland Amateur Radio Club Amateur Radio Rally and Craft Fair will take place at the Burton Cliff Hotel, Burton Bradstock, near Bridport in Dorset next Sunday, the 3rd of December. The event features traders; local radio club, RNARS and RAIBC stands; a Novice information desk; and a bring and buy stall. Doors open at 10.30 am, and for further information contact Carol Houldon, 2E1DQZ, on 01305 823373.

And next Sunday, the 3rd of December, the SDX Support Group will be hosting an Amateur Radio and Computing Rally at the Maryhill Community Central Halls, Maryhill Road in Glasgow. There will be two lecture streams and a large RSGB presence at this event north of the border. RSGB Council or Committee members will be represented at a Packet Forum, and the RSGB VHF Committee Forum, HF Contests Committee Forum and Council Forum. Contact Raymond James, GM4CXM, on 0141 942 6657 for further details.

The Caernarfon 2 metre repeater GB3AR, which operates on channel R4, is still operating without a masthead pre-amplifier. The Arfon Repeater Group apologises to users and is taking steps to investigate the problem. For further details contact the repeater keeper, Brian Davies, GW4KAZ, on 01286 682130 during office hours.

The 70 centimetre voice repeater at Stoke-on-Trent, GB3ST, which operates on channel RB2, became operational from a new site on the 12th of November.

Now for the HF contest news:

There are no RSGB HF contests this weekend, but the CQ World Wide DX CW Contest is taking place over the full 48 hours of the 25th and 26th of November. Operation can be on any band from 160 to 10 metres, excluding the three WARC bands. Exchange an RST report and CQ Zone - the UK is in Zone 14.

The "TOPS" Activity Contest takes place next weekend, from 1800 UTC on Saturday the 2nd of December, for 24 hours. Activity is between 3510 and 3560 kHz, CW only, and logs should be sent to OE1TKW.

Next some VHF contest news:

We know of no VHF contests this weekend, but the penultimate session of the RSGB 432 MHz Cumulative Contest takes place tomorrow evening, Monday the 27th of November. The rules are in the June RadCom. Please note that this contest takes place between 1930 and 2200 local time, as printed in the rules, and not at the times stated in the Contest Exchange column in the November RadCom.

And now the solar factual data:

The period from the 13th to the 19th of November saw solar activity at very low levels and the geomagnetic field at quiet levels. Sunspot numbers increased from 12 on the 13th, to 61 by the 18th, with a mean of 37. Solar flux levels increased slightly from 73 units on the 13th, to 77 units by the 15th. The average for the period was 75 units. No solar flares were reported. The X-Ray flux increased slightly, from A1.0 units to A3.7 units by the 17th, with an average of A1.7 units. The electron fluence remained at a moderate level throughout the period. The 90-day solar flux average on the 19th was 75 units, the same as last week.

Geomagnetic activity was down to very quiet levels, with an Ap index of 3 on the 14th and the 15th. Activity increased slightly, and by the 19th the Ap index was 10. The average for the period was Ap 5 units. The aa indices, as supplied by the British Geological Survey for the period from the 6th to the 12th of November, saw levels decline from 'active' on the 6th - with 38.5 nanoTeslas - to 'quiet' for the rest of the period. Only 9.4 nanoTeslas was recorded on the 12th with an average of 13.7 nanoTeslas, which is K2.

I'll repeat the figures: spots - 37, flux - 75, Ap index - 5, X-Ray flux - A1.7.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 10th to the 14th of November, increased from 7.1MHz on the 10th, peaked at 8MHz on the 12th, but then declined to 6.8MHz by the 14th. The average was 7.3MHz. The darkness hour lows were more stable, and varied little day to day, with an average of 2.8MHz. The daytime highs took place between 1100 and 1500 hours, with the darkness hour lows at 0600 hours every day except for the 12th, when it took place at 1900 hours.

I'll repeat the figures: highs - 7.3MHz, lows - 2.8MHz.

And lastly the solar forecast:

This week, with the quiet side of the sun looking our way, solar activity is expected to remain at very low levels. Solar flux levels are expected to decline slightly and be at the low 70s for most of the week. Geomagnetic activity is expected to be at mostly unsettled levels, but there is an outside chance that levels could increase to sub-storm levels around midweek. Ionospheric MUFs during daylight hours are expected to be about 23MHz for the south and 20MHz for the north. The darkness hour lows are expected to be about 9MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Quebec and G7 Victor X-Ray series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Papa series.

-> optimum distance for an FM contact, without skip, and what it would it be
-> for SSB without skip.
-> I am currently a tech nocode but did get my first novice ticket in 1967,
-> and I am studying my code to upgrade to plus then General, and I am thinking
-> about my next radio, and this 6m is starting to sound kinda fun.

An optimum contact would be from where you are in Houston to where I am in
Vancouver, but the problem is very few listen for FM DX, I dont know
anyone that does. We sit on 50.125 listening intently for USB. This last
summer, stations in our area worked Japan, all over North America, some
even managed Europe.

6M isn't just for no codes, its just plain fun for all.

2603. Help - Low Speed Radio Communication

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-23 00:00:00 UTC
From: Ian Butt <butt@gaul.csd.uwo.ca>
Message-ID: <Pine.SOL.3.91.951123151743.7418E-100000@obelix>
Source record: 235015

I have to do a paper on low speed radio communication. Low speed, I mean up to and including Amplitude modulation(AM) and shortwave radio. I don't really want to know much about the physics of radio communication. I am suppose to write about error correction, error detection, and physical faults with this communication. It is for a fourth year information, coding theory course.

Thanks....

Sincerely,
Ian Butt

...
>I had been guaranteed an electronics school, since I aced the
>preliminary test at the recruiting office, twice (they thought I might
>have cheated the first time),...

I remember those tests. I took one for the Air Force in 1966 or 67...the AFQT, I think. They had some real interesting questions on the one I took...like showing a drawing of a screwdriver and asking which end is the handle (honest!). And which tool would you NOT use to change a tire: A. Jack, B. tire iron, C. Cutting torch. I aced mine too (some of the guys sweating it out never did finish it). I think I selected jet engine maintenance but then I failed the physical and was classified 4F. Oh well...

From what I hear, they selected people with an aptitude, like Doug said. Then they put you in a class and gave you an incentive...learn the code or end up carrying an M16 and slogging through the mud with people shooting at you. It was pretty much hammered into you.

I went thru the same thing in Army boot camp at Fort Knox in 1963.
They stuck our company in a classroom for about an hour and did the
same thing as Doug experienced. After they taught the several letters,
they started sending them and slowly increased the speed up to about
20 WPM. I think I was the last one still copying at the end.

Some years later our explorer scout troop got some code learning tapes
from Air Force Mars. They are about the best I have ever heard. Not
only are they teaching the code but the phonetic alphabet at the same
time. The farnsworth method is used in these tapes.

2611. Alpha Bravo Charlie Delta: phonetic alphabets (revised)

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-23 00:00:00 UTC
From: Brian.Kelk@cl.cam.ac.uk
Message-ID: <492k2i$jvj@lyra.csx.cam.ac.uk>
Source record: 235023
Cross-posted to: sci.lang,rec.radio.amateur.misc,rec.radio.info

Phonetic Alphabets (Alpha Bravo etc)
November 1995

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets, spelling alphabets and telephone alphabets.
This collection currently includes alphabets for the
following languages:

English, French, German, Dutch, Flemish, Spanish,
Portuguese, Italian, Rumantsch, Danish, Norwegian,
Swedish, Finnish, Czech, Slovak, Polish, Hungarian,
Croatian, Serbo-Croat, Romanian, Turkish, Hebrew,
Russian, Swahili, Chinese and Esperanto.

This posting supersedes the one of 11th October.

My thanks to the many contributors, not all of whom are
acknowledged below.

Please report any errors. Please also mail or post any
further information or anecdotes.

In my capacity as the editor of this collection I have no
objection to the further electronic distribution of this
posting in full in circumstances where it is likely to be of
interest. In the case of Web servers I ask that there be no
reformatting and suggest the use of the XMP directive.

* Following recent discussions this article will now NOT be
* posted to alt.usage.english.

You may also find a copy of this posting on the World Wide
Web at these addresses:

http://www.columbia.edu/~fuat/cuarc/phonetic.html

http://www.cl.cam.ac.uk/users/bck1/trialfull.html

and of the brief version at:

http://www.cl.cam.ac.uk/users/bck1/trialbrief.html

Editorial comments are in square brackets.

***** ENGLISH *****

The NATO phonetic alphabet (as per the Cambridge Encyclopedia
of Language under Seaspeak):

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[The same alphabet is approved by the International Civil
Aviation Organization, the FAA and the International
Telecommunication Union; note that different bodies prefer
different spellings, so one also sees: Alfa Juliett Juliette
Oskar Viktor.
Dates from about 1956.
See also http://aviation.jsc.nasa.gov/alphabet.html, which
includes information about pronunciations]

[UK police use Indigo(?) instead of India.
German army handbook 90/91: Alfa Foxtrott Juliett.
Italian version: Alfa Charly FoxTrot Giuliet Romio Wiskey.
An Indonesian phrase book has: Beta Ultra Volvo Whisky X-ray]

'Telecom B':

Alfred Benjamin Charles David Edward Frederick George Harry
Isaac Jack King London Mary Nellie Oliver Peter Queen Robert
Samuel Tommy Uncle Victor William Xray Yellow Zebra

[Found also in Swedish, Dutch, Hungarian telephone directories.
An "analogy alphabet" in a Kenyan directory has 'Charlie'
and no Y. A Swiss directory has: Andrew Charlie Lussy
Queenie Sugar. French/German vocabulary books: Andrew
Charlie Lucy Mike Nelly Sugar Xmas]

'British A':

Amsterdam Baltimore Casablanca Denmark Edison Florida
Gallipoli Havana Italia Jerusalem Kilogramme Liverpool
Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli
Uppsala Valencia Washington Xantippe Yokohama Zurich

[An 'international' alphabet in a Dutch telephone directory
has: Danemark. A 'French' alphabet in a Hungarian directory
has: Cassablanka Danemark Que'bec Upsala Zu"rich.
An 'international' alphabet in a business book for French
has: Italy Kilogram Zu"rich; the corresponding book for
German has: Italy Kilogram Xanthippe Zu"rich]

Used by police in New York City:

Adam Boy Charlie David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Peter Queen Robert Sam Tom
Union Victor William X-ray Young Zebra

[Variants: Eddie Larry Nancy Thomas Yankee Yellow]

Used by police in Nassau County, Long Island, New York:

Adam Boston Chicago Denver Edward Frank George Henry Ida
John King Lincoln Mary Nancy Ocean Peter Queen Robert Sam
Thomas Union Victor William X-ray Young Zebra

Used by police in San Diego, California:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Queen Robert Sam Tom Unit
Victor William Xray Yellow Zebra

Used by police in Hutchinson, Kansas:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Q.. Robert Sam Tom Union
Victor William X-ray Yankee Zebra

Sometimes used by radio hams (unofficial):

America Boston Canada Denmark England France Germany
Honolulu India Japan Kilowatt London Mexico Norway Ontario
or Ocean Pacific Quebec Radio Santiago or Spain Tokyo United
Victoria Washington Xray Yokohama Zanzibar

[Much variation: Amsterdam, Brazil, Baltimore, Chile,
Finland, Greece, Guatemala, Hawaii, Italy, Kentucky,
Luxembourg, Nicaragua, Portugal, Romania, Sweden, Texas,
Uruguay, Venezuela, Whisky, Zulu]

The ARRL (American Radio Relay League) alphabet (1948):

Adam Baker Charlie David Edward Frank George Henry Ida John
king Lewis Mary Nancy Otto Peter queen Robert Susan Thomas
union Victor William x-ray young zebra

[Nowadays the ARRL endorses the NATO/ICAO alphabet]

Pre-1954 U.S. Navy Radio Alphabet:

(Communications Handbook, 1945)

Able Baker Charlie Dog Easy Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tare Uncle Victor
William X-ray Yoke Zebra

"Used by Armed services of USA & GB" (ARRL Handbook, 1945)

Able Baker ... Easy ... Tare ...

Allied Services 1945:

Able Baker ... Edward ... Tape ...

From a book entitled "The Complete Morse Instructor..." (1944):

Able Baker ... Easy ... Tare ...

RAF 1943-56:

Able-Afirm ... Item/Interrogatory ... Jig/Johnny ...
Nab/Negat ... Peter/Prep ...

[See also http://aviation.jsc.nasa.gov/old-alphabet.html.
In other alphabets of the Able Baker class: affirm, cast,
hypo, inter, negat, option, over, prep]

RAF 1942-43:

Apple Beer Charlie Dog Edward Freddy George Harry In
Jug/Johnny King Love Mother Nuts Orange Peter Queen
Roger/Robert Suga Tommy Uncle Vic William X-ray Yoke/Yorker
Zebra

[cf. Dam Busters film: A apple, G George, J Johnny,
L leather, M mother, N nuts, P popsy, Z zebra]

Western Union:

Adams Boston Chicago Denver Easy Frank George Henry Ida John
King Lincoln Mary New_York Ocean Peter Queen Roger Sugar
Thomas Union Victor William X-ray Young Zero

British Army 1927:

Ack Beer Charlie Don Edward Freddy George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc
Uncle Vic William X-ray Yorker Zebra

RAF 1924-42:

Ac Beer Charlie Don Edward Freddie George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc
Uncle Vic William X-ray Yorker Zebra

Royal Navy 1917:

Apples Butter Charlie Duff Edward Freddy George Harry Ink
Johnnie King London Monkey Nuts Orange Pudding Queenie
Robert Sugar Tommy Uncle Vinegar Willie Xerxes Yellow Zebra

U.S. Army 1916:

Able Buy Cast Dock Easy Fox George Have Item Jig King Love
Mike Nap Opal Pup Quack Rush Sail Tape Unit Vice Watch X-ray
Yoke Zed

2612. Please help with expired license

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-23 00:00:00 UTC
From: Joseph@panix.com
Message-ID: <Joseph.9.30B3E9AD@panix.com>
Source record: 235078

I just realized my license expired 9/10/95.

Please, someone tell me I don't have to go thru the testing process again.

Is it possible to renew by mail or some other painless way?

Thanks,

Joseph R. Skoler

2613. Pioneer KE-A530 question

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-23 00:00:00 UTC
From: candea@ATHENA.MIT.EDU
Message-ID: <492p7f$3dd@senator-bedfellow.MIT.EDU>
Source record: 235079
Cross-posted to: rec.radio.amateur.misc,rec.radio.cb,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,alt.radio.uk,aus.radio.amateur.misc

I apologize if I am posting this to the wrong newsgroup but I am in desperate need of advice. I have a Pioneer KE-A530 car radio + cassette that my friend removed from his car a while ago. I am not sure which wires go where because I don't have the manual anymore and there is no indication on the radio as to what each wire is. I would appreciate if any of you could tell how to make the connections (i.e. which is PWR, GND, speakers, etc.).

The wires are in three "bunches":

Bunch 1: blue
black

Bunch 2: green/black (2 wires)
gray/black (2 wires)

Bunch 3: black (this is definitely a GND -- connected to case)
red (has a 0.5 Amp fuse on it and a little box)
yellow
orange (this must be PWR -- it has a 0.5 Amp fuse)

I really appreciate your help. I reply to my personal e-mail address, as I do not read this newsgroup regularly.

Thank you,

2614. Re: Pioneer KE-A530 question

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 23/2330Z NOVEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 23 NOVEMBER AND FORECAST FOR 24 NOVEMBER - 26 NOVEMBER

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 73/9

GOES satellite data for 22 Nov
Daily Proton Fluence >1 MeV: 6.2E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 2.2E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
24 Nov 25 Nov 26 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 24 Nov: 72/8

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 22 Nov
Learmonth 4 1121 1122
Fredericksburg 3 4
Planetary 5 4

Observed Kp for 22 Nov: 0101 1311
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
24 Nov 5 quiet
25 Nov 5 quiet
26 Nov 5 quiet
COMMENT: Brief periods of active levels are expected 28 Nov - 4
Dec.

3A. GLOBAL HF PROPAGATION SUMMARY

>
>Any suggestions?
>--
I have done the following with a similar antenna: I removed the twin-lead
and soldered a coaxial cable directly to the bases of the telescoping
antenna halves. That area I sealed with epoxy resin. The telescoping parts
of the antenna have to be extended only for a quarter wavelength each, for
the 2 m band this would be about 49 cm or 19 1/4 inch. I marked it with a
waterproof pen - so I don't need to carry around an inch rule ;-).
This way I got an easy-to-handle portable dipole which performs quite well
as a 3/2 wavelength antenna on 70 cm (even collapsed it is too long for a
70 cm dipole).
One could improve the antenna by adding a 1:1 balun in the feedpoint.
I didn't, therefore my antenna "has a squint", but not a strong one.

By the way, after I had built the antenna, I stumbled over an article in
"QST" 1991 or 1992 which describes a similar little project.

: --
Yes you can. We have a special agreement with the US about this. Just
drive across the border. Make sure you have a copy of your US ticket just
in case. You might want to register your new HT with US customs before you
leave to make sure you have no problems bringing it back home. OH yeah,
and your call in the Toronto area would have /VE3 added to the suffix.
Enjoy the weather....

2620. Re: 6m question

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-23 00:00:00 UTC
From: fedpress@omnifest.uwm.edu
Message-ID: <492euh$b5p@omnifest.uwm.edu>
Source record: 235086

If you're looking into 6 meters, your single smartest initial move would probably be to shell out 14 bucks for a (postpaid) copy of "Six Meters: A Guide to the Magic Band" by Ken Neubeck, WB2AMU. It's available from Worldradio Books, Box 189490, Sacramento CA 95818-9490.

Having never operated 6m mobile, I can't really answer your questions. However, for what it's worth, two days ago (11/21/95) there was an opening on 6 that enabled me to work from Milwaukee to TX, SC, DE, VA, MD, NH, NY, NJ and MA using 90w from an IC-551D to a Diamond ground plane mounted on the roof of my garage. Prior to getting the Diamond, I worked Panama on 6m SSB using the IC-551D and my Cushcraft R7 (HF) vertical!

Yeah, 6 is a fun band, but it requires CONSTANT monitoring to take advantage of the sudden band openings.

73,

Rick WB9GYT
Milwaukee

I agree, but it sure would be nice if some of these folks who get all aquiver when they see their names attached to a missive, no matter how purile, would exercise a little self-censorship.It would also be a great boon to this news group if those folks who get irritated at the endless, inane postings of some would restrain themselves from commenting on them. It's a given that if some of the dolts who clutter up news groups with verbal droppings were totally ignored, they'd go away, perhaps to alt.loonies or somesuch....

2624. HF TOO CROWDED?

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-24 00:00:00 UTC
From: kk5dr@bga.com
Message-ID: <494maj$l8n@giga.bga.com>
Source record: 234940

I have a few statements & questions to make;
First off I am only talking about the HF AMATUER SPECTRUM now. Here's how it breaks down;
(1) The total HF radio specrtum usable for AMATUER operators is; 3.750 mhz
(2) Accordding to the ARRL band plan(gentlemens agreement) SSB is; 1.973 mhz
(3) CW is; 1.198 mhz
(4) Using these figures, there is theoredical maximum usage level for HF, being; 1,856 qso's
(5) SSB 1,973khz divided by 3khz = 658 qso's
(6) CW 1,198khz divided by 1khz = 1,198 qso's
(7) Hence 658 + 1,198 = 1,856 total qso's
I know this does not take into account for propagation, but that's beside the point, there are 750,000 hams
in the U.S.A., and if only 10% = 7,500 were to get on HF, the bands would be over flowing. If only 1% of them were on SSB, it would be too many.

I here all the talk about needing more hams, WE NEED MORE HAMS, or ham radio will die!
You must look closely at who is saying this, and why.
If it's so important that we have "so many" new hams, then set a goal, the "majic" number, that if we reach
it, hams radio will be in no danger of dieing.
My question is; What is that "MAJIC" number, how many is enough, what is a "healthy" growth rate?
Anyone who listens to HF on a weekend, knows what I'm talking about, GOD help you if there is a contest
running(and when isn't there one) on a weekend that you want to get on the air.
The first thing any of you are going to tell me is; Go on vhf/uhf etc. That is not what I became a ham for,
my goal was HF, where DX is "reliable" on a given band. That is also the goal of most of the hams out
there, if not, why bother with having different classes of licenses, there needs to be a "clear" set goal,
for advancement, & added privleages rewarded for it, otherwise, what's the use in all of this?!
The FCC says that all the RF spectrum there is, is all there ever will be, and as more & more hams come into
the hobby, the more & more crowded it IS going to get!
Matt/KK5DR

2625. Good Windows Log?

Date: 1995-11-24 00:00:00 UTC
From: "George J. Molnar" <gmolnar@nexus.interealm.com>
Message-ID: <30B5DC16.2DE7@nexus.interealm.com>
Source record: 234941

Anyone know of a good logging program for windows? I'd like one that (at least) interfaces with a SAM callbook. I've seen many pretty decent DOS based loggers out there, but I'd like to go "all windows", if possible.

Thanks!

The "Z" codes are used for military communications only, usually CW
and RTTY. The signal you are looking for is ZBM 2: "Place a
competent operater on watch on this frequency". More can be found in
the NAVMARCORPS MARS NTP 8(B) Communications Instructions.

I hear this is a good desk mic for HF rigs, etc... I also notice that it's made by RF Limited... known for creating some CB stuff... I'm wondering if anyone has any experiences with this mic or similar models and how it would compare to something like a kenwood MC85 desk mic. Thanks for any EMAIL REPLIES.
Appreciate it...

2632. Funny QSO

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-24 00:00:00 UTC
From: cgreenha@magnus.acs.ohio-state.edu
Message-ID: <494okp$69n@charm.magnus.acs.ohio-state.edu>
Source record: 234948

Hi All.

Im certainly not a 'tech' basher, but I heard this QSO on one of our
local repeaters in Columbus, and thought Id share it with you.

Ham A and B were talking about antennas. Their QSO was going along fine,
talking about the different 1/4, 1/2, 5/8, and full wave antennas. They
were also citing DB (gain) references, quads, beams, and their related
effectivness.

They were both newly licensed, and I must say that I was quite immpressed
with their (alledged!) knowledge. Everything they had said up to this
point was right on track until.......

Ham B: "...yea, my Uncle has a full wave 80 meter unloaded verticle, he
gets out real good..."

Needless to say, there was silence on the air for a few seconds, then Ham A
cleared.

Ahem.... :)

>There are several good Morse Code programs, but Super Morse is (in my
>humble opinion) about the best. You can get the latest Windows version
>at:
>

Yes I have used super morse to get my 5wpm upgrade, and am working at
8wpm at the moment, it's a great trainer.

What I do'nt like about it, is it's manual keying function. It doesn't
match my sending very well at all. Besides, when you manually send, all
it does is put your code on the screen.

Do you know of any software that lets you interact? I've seen some guys
hardware keyer, that simulate qso's and lets you talk back to it. It
recognizes your code somehow, but I'd like to see a software
version....any ideas?

>
>
>I really appreciate your help. I reply to my personal e-mail address, as
>I do not read this newsgroup regularly.
>
>Thank you,
>

I'll try, but dont blame me if it blows up!!!. Ok...start with bunch 3. The black wire goes to battery negative terminal, or chassis ground. The red wire with fuse holder and box (noise filter, likely) goes to ignition ACC ON. T The yellow wire is used if you want to send a signal to an auto amplifier (external power amp, subwoofer, etc) or a power up/down automatic retractable antenna. The orange wire might be to control a clock if the radio has a clock built in. Orange wire would then go to the battery and the red wire would go to the acc side of the ignition switch. Then, when you turn the car -on-, the radio works. Otherwise, when the car is off, the only power received by the stereo is on the orange wire and the only operating function is the clock. Only when the car is -on- does the radio/tape actually work.

bunch 1 : blue/black...bunch 1. not sure, possibly line in for an equalizer.

Bunch 2: most likely, this is left channel positive and negative (to speaker left)
most likely, this is right channel positive and negative (speaker right)

Without trying it, it's hard to say. Does the radio have a "fader" for
front-and-back speakers, or is it only a 2 channel output (left and right but no
front and back)???

Keep your posts here...someone can probably help ya.

2642. What is a spam ? Here's the answer...

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-24 00:00:00 UTC
From: time@tir.com
Message-ID: <494u8t$mj5@ramp2.lisp.com>
Source record: 234958

I just found out what a "spam" was a couple of weeks ago, the hard way. Dont let it happen to you !

I responded to one of Burt Fisher's messages on rec.radio.swap and about 3 hours later I got some email from my provider that I was being accused of spamming the radio newsgroups.

I had to ask him what the heck a "spam" was and he told me.

A spam is a message that has been sent to several newsgroups at the same time and usually is off subject. The bad thing about responding to a spammed message is that if you post a follow up article then your reply also spams the same newsgroups. Burt Fisher seems to love doing this. He loves the attention people give him and seems to thrive on it. He also likes to send flames on packet when he reads messages he doesnt like.

The best we can do is to simply ignore his messages or if you MUST respond do it via email lest you get some nasty grams from your providers as well.

Happy hamming !

Tim (time@tir.com)

>
> I notice that I am posting this response to all the rec.radio.xxx
> groups. Since I don't know where this thread originated, I'll leave
> it that way....and now I too have become a "spammer"!!!

Not really. You have posted 'velveeta' (Vegetarian spam).

The difference is that velveeta is crossposted (note the newsgroup line). On the internet, this message will cross the backbone once, and be stored on the ISP host harddrives once, with references to the crossposted newsgroups. It can't even really be called velveeta because you were answering a valid question, even if it was off-topic for the newsgroup in question.

Spam is a message, usually commercial in nature, that is posted once for every newsgroup. In this case, the same message will cross the backbone and be stored on the harddrive once for each newsgroup, resulting in massive waste of bandwidth and disk space.

Internet lore: the term was derived from the Monty Python skit, were 'spam' was said/sung numerous times. It was a really funny skit, too.

Hope this helps.

2646. PRODUCT REVIEW: PALOMAR ENGINEERS' TUNER TUNER

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-24 00:00:00 UTC
From: mc@shore.net
Message-ID: <495b8o$at6@northshore.shore.net>
Source record: 235027
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

PRODUCT REVIEW: PALOMAR ENGINEERS' TUNER TUNER

The Tuner Tuner does just that - allows you to adjust your antenna coupler to a given frequency without using your transmitter. This is particularly important for those using solid-state finals that are not particularly forgiving if they don't see close to 50 Ohm impedance. Not to mention cuttingdown on the QRM!

The Tuner Tuner is easy to install - simply put it in line between your transciever and antenna transmatch. Install a 9V battery and you re done. To use, tune your receiver to the desired frequency, and switch the Tuner Tuner to TUNE. Adjust your antenna tuner for a null in the noise from the receiver and your antenna is tuned to match the transmitter on that frequency. Make sure to turn the Tuner Tuner OFF (or you'll risk putting R F into it). Its that simple! If you do forget to turn the Tuner Tuner off you will blow the internal fuse (and a spare is provided!) but otherwise the instrument will be unharmed.

When I first saw this accessory in the Palomar catalog I wondered why anyone would want one. I thought I could use the Palomar R-X Noise Bridge to accomplish the same task, ie: preset my antenna matching unit to different bands and frequencies and note the settings for future reference. What I hadn't taken into account is the fact that the antenna impedance would vary at a given frequency under different conditions, like ice. The tuner tuner was designed to be left in line and switched on as needed.

The Tuner Tuner is well constructed of quality materials and is a worthwhile adjunct to any antenna tuner system.

Well then you've pretty much shot yourself in the foot. If you don't
want to know the characteristics of the channel, there isn't much
intelligent you can say about coding choices for that channel.

There are several good Morse Code programs, but Super Morse is (in my humble opinion) about the best. You can get the latest Windows version at:

ftp://oak.oakland.edu/pub/hamradio/pc/theory-and-morse/sm410.zip

Also, to find out more about learning the code there is a good article at:

http://www.primenet.com/~aa7tq/learncw.html

Good luck with the code and upgrade!

Hi! I'm not sure if this is the right area for this question, but its as
close as I could find.

I am using a GE SuperRadio III for AM broadcast reception, and am in the
southern part of Ontario Canada, about 60 miles west of Toronto. I want
to pick up Howard Sterns show, but need some frequencies and times to try.

Any suggestions?

Thanks in advance

You seem to have mistaken this newsgroup for a reference library.
It isn't.

You seem to have mistaken the readership for research assistants.
We aren't.

You might consider taking the old fashion approach to this assignment,
and try doing the work yourself. Although this requires expending
effort, reading, doing math, writing, and other such unpleasantness,
it has the advantage that you might actually come to an understanding
of the subject matter.

> Thanks....

You're quite welcome.

Hello Gang,

I've got some restorations going and need a few parts to finish up.

1. Bunnell Gold Bug -- need the circuit closing lever and mounting hardware.
2. Signal Electric Semantic -- need the pendulum stop post.
3. Electro Bug -- need weights. need one thumbscrew and jam nut.
4. Levinson Radio "Like-A-Flash" -- need finger pieces, binding posts.
5. Logan SPEED-X -- need finger pieces

Would buy parts off your junkers or buy your junkers for the parts.

**** Want Old Telegraph Keys ****

I am looking for old Vibroplex bugs for my collection. Also interested
in off-brand bugs, hand keys and pre-1920 telegraph instruments. Will
purchase or trade my duplicates. Email for my list of duplicates for trade.

2658. Re: HF TOO CROWDED?

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-25 00:00:00 UTC
From: gary@ke4zv.atl.ga.us
Message-ID: <1995Nov25.184030.10643@ke4zv.atl.ga.us>
Source record: 234889

In article <494maj$l8n@giga.bga.com> kk5dr@bga.com writes:
>I have a few statements & questions to make;
>First off I am only talking about the HF AMATUER SPECTRUM now. Here's how it breaks down;
>(1) The total HF radio specrtum usable for AMATUER operators is; 3.750 mhz
>(2) Accordding to the ARRL band plan(gentlemens agreement) SSB is; 1.973 mhz
>(3) CW is; 1.198 mhz
>(4) Using these figures, there is theoredical maximum usage level for HF, being; 1,856 qso's

That's obviously wrong, so there must be something wrong with the assumptions which follow (and there is).

>(5) SSB 1,973khz divided by 3khz = 658 qso's

But realistic on air experience shows that spacing need only be about 1.8 kHz for signals of equal strength. That gives 1096 QSO slots, and with a minimum of 2 amateurs required for a QSO, that accomodates 2192. But that number is also much lower than actual on the air experience supports, so there's still something wrong with this (see below).

>(6) CW 1,198khz divided by 1khz = 1,198 qso's

OOK Morse signals are non-overlapping at a spacing of 400 Hz, and operators have found in practice that spacings as little as 250 Hz are usable at slower speeds.

>(7) Hence 658 + 1,198 = 1,856 total qso's

If we accepted your assumptions so far (with the corrections noted) we'd have 4588 amateurs in QSO at once in mixed SSB/CW modes totally filling HF. But actual on the air experience shows that not to be the case, so there is still something you are missing (see below).

>I know this does not take into account for propagation, but that's beside the point,

Ah ha, now we find the fatal flaw. Propagation *does* matter. In fact it matters a *lot*. Notice that the band filling SSB count above was 2192, but that assumes that all signals (from anywhere in the world) have equal strength at your receiver. They don't. If there is only a 12 db difference in signal strength, QSOs can be carried on simultaneously *on the same channel* by more than one pair of stations. Differences in propagation from one path to another are *frequently* 12 db or more, so your counts really only apply to the local area. The frequencies are reused again and again in different areas along different propagation paths.

>there are 750,000 hams
>in the U.S.A., and if only 10% = 7,500 were to get on HF, the bands would be over flowing.
>If only 1% of them were on SSB, it would be too many.

But of course there are about 260,000 amateurs in the US licensed to get on HF, and according to the latest figures released by ARRL, 79% of them operate SSB (and about 2.5 *million* amateurs in the world, with a majority of them able to get on HF). Now since the bands *aren't* congested past using, your scenario falls flat on its face. The most extreme situation happens annually during Field Day. There are many more than 7500 amateur stations on HF on that day, but still there are some pretty impressive scores rolled up, so the bands are certainly usable under extreme pressure.

>I here all the talk about needing more hams, WE NEED MORE HAMS, or ham radio will die!
>You must look closely at who is saying this, and why.
>If it's so important that we have "so many" new hams, then set a goal, the "majic" number, that if we reach
>it, hams radio will be in no danger of dieing.
>My question is; What is that "MAJIC" number, how many is enough, what is a "healthy" growth rate?

A number that represents effective political power is 3 million (see NRA). More would be better, but 3 million should be adequate. A healthy growth rate is one which results in amateur radio operator demographics tracking the demographics of the US population at large. That hasn't been the case since 1968, but things are turning around a bit now and the average age of the amateur population is no longer increasing at a rate of nearly one year per year (which represented a greying (and dying) of amateur radio which could not be sustained over the long term).

>Anyone who listens to HF on a weekend, knows what I'm talking about, GOD help you if there is a contest
>running(and when isn't there one) on a weekend that you want to get on the air.

Then I'd suggest you need to sharpen your operating skills. Certainly those participating in the contests have, since they are effectively communicating. If you can't, you're doing something wrong.

>The first thing any of you are going to tell me is; Go on vhf/uhf etc. That is not what I became a ham for,
>my goal was HF, where DX is "reliable" on a given band. That is also the goal of most of the hams out
>there,

Actually, if Dx were *reliable* it wouldn't be a challenge now would it? And Dxers wouldn't bother competing for awards now would they? This all sounds like you've never really operated much at HF.

>if not, why bother with having different classes of licenses,

Now there's a good question. Why indeed do we bother with having different classes of licenses? I can't think of a good reason. (I've heard several *bad* reasons, but not any good ones.)

>there needs to be a "clear" set goal,
>for advancement, & added privleages rewarded for it, otherwise, what's the use in all of this?!

Maybe radio communication and experimentation? If the only point of
amateur radio is the passing of exams, then indeed we should ask
what's the use of all this?

Gary

ARLP049 Propagation de KT7H

ZCZC AP18
QST de W1AW
Propagation Forecast Bulletin 49 ARLP049
From Tad Cook, KT7H
Seattle, WA November 25, 1995
To all radio amateurs

SB PROP ARL ARLP049
ARLP049 Propagation de KT7H

Average sunspot numbers for the past week were about double the week before, but solar flux was slightly lower. While we expect the two major indicators of solar activity to track together, they often don't.

Solar flux is a measurement of 2800 MHz energy from the Sun, which seems to correlate with ionization of the ionosphere. Sunspot numbers relate to the size and number of visible sunspots. One example of the two not tracking exactly is the forecast for the end of this solar cycle and the beginning of the next. Solar flux is currently expected to reach minimum between January and February of 1997, while the minimum for sunspot numbers is predicted for April through June of 1996. Part of this may be due to the fact that the solar flux has been tracked for fewer cycles than the sunspot number, so the amount of data going into the projection is different.

Over the next few weeks solar activity is expected to stay low, with solar flux possibly peaking slightly in the mid to high seventies around December 6. Disturbed conditions from a weakening coronal hole are predicted for November 27 through 30. Look for very stable conditions from December 7 through 9 and again after December 16.

Sunspot Numbers for November 16 through 22 were 49, 47, 61, 15, 15, 11 and 13, with a mean of 30.1. 10.7 cm flux was 75.9, 75.1, 75.1, 74, 73.2, 72.8 and 73, with a mean of 74.2.

The path projection for the CQ Worldwide CW Contest this weekend is from the center of the United States to Europe, East Asia, Africa, South America, Central America and the South Pacific.

To Europe, check 80 meters from 2230z to 0830z, 40 meters from 2130z to 0000z and 0530z to 0930z. 20 meters should be open from 1500z to 1630z.

To East Asia 80 meters should be good from 0730z to 1400z, and 40 meters from 0630z to 1530z, with weaker signals from 1200z to 1230z. 20 meters looks good from 2130z to 2230z. 15 meters might be open around 2200z.

To Africa 80 meters looks good from 2300z to 0300z, 40 meters from 2230z to 0000z and 20 meters from 1500z to 2030z. 15 meters may have an opening centered around 1800z.

To South America 80 meters should be open from 2330z to 0930z, 40 meters from 2230z to 1000z, 20 meters from 1430z to 2230z and 15 meters from 1630z to 1900z. 10 meters may be open some days from 1830z to 2000z.

To Central America check 80 meters from 2300z to 1230z, 40 meters from 2030z to 0030z and again around 0700z to 1600z. 20 meters should be good from 1600z to 2100z, and 15 meters may be open some days from 1800z to 2030z.

To the South Pacific check 80 meters from 0930z to 1330z, 40 meters from 0930z to 1400z and 20 meters from 1530z to 1800z. Check 15 meters around 2100z to 2230z. On some days 10 meters could open around 2100z to 2200z.

2660. This Week in Amateur Radio #139 (for air through 12/1/95)

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-25 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <hPKlb0x.sanderman@delphi.com>
Source record: 234891

Here is a summary of news items covered on edition #139 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 1-Dec:
-
1. Atlantis Hams Land Safely after Historic SAREX Mission
2. ARRL Announces Winners of Section and Division Elections
3. Government/FCC Go Back to Work, Processing Delay Expected
4. "This Week in Amateur Radio" to Change Satellites
5. New QSL Manager Russian MIR Space Station Appointed
6. Weekly Propagation Forecast with George Bowen, N2LQS
7. "The RAIN Dial-up" from Chicago
8. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
9. Upcoming Special Event Stations
10. Interview with Jock Elliot, KB2GOM, of "Popular Communications"
11. "Amateur Radio Newsline" - Edition #954 from Los Angeles
-
Funding for the program's transmission and production expenses was
provided this week by a grant from the N6ICW Repeater Fund, of
Sacramento, California, which carries "This Week in Amateur Radio"
on the N6ICW repeaters in Sacramento, serving the Sacramento Valley
and San Francisco Bay area on 147.195 MHz, and in South Lake Tahoe,
serving Tahoe, Reno, and Carson City, Nevada on 145.15 MHz.
Satellite time and uplink equipment have been provided by SKYVISION
as a service to the amateur radio community.
-
"This Week in Amateur Radio" is a weekly amateur radio news and
information service, in audio newsmagazine format, which is produced
by Community Video Associates, Inc., a New York State not-for-profit
corporation based in Albany, New York. The program is carried on
the "Tech Talk Network" each Saturday at 8:00 PM (EST) on the
Telstar 302 commercial communications satellite, transponder 21
(11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees
west longitude in geosynchronous orbit, and can be heard on various
VHF/UHF repeaters throughout the United States and Canada, as well
as on 160 meters at 1860 kHz. Contact your local amateur radio club
or repeater operator if "This Week in Amateur Radio" is not being
heard in your area.
-
Production and transmission expenses are underwritten by
contributions from repeater system operators, amateur radio clubs,
and individuals. For further information, contact George Bowen,
N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at
518/664-6809. You may also reach them via amateur packet @
WA2UMX.FN32AW.ENY.NY.USA.NA or on the Internet to KXKVI@DELPHI.COM

or SANDERMAN@DELPHI.COM.

2663. CQ Bonfire-special event station announcement

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-25 00:00:00 UTC
From: kg5ai@w5ac.tamu.edu
Message-ID: <4984rs$nr6@news.tamu.edu>
Source record: 234894

Special event announcement:

Who: W5AC Texas A&M Amateur Radio Club
What: CQ Bonfire
When: December 1, 1995 approx. 11am to 6pm.
Where: W5AC Shack 3rd Floor Memorial Student Center
Why: for us-Tradition, for you-a nice certificate
Frequencies (in kHz):
7285
14250
18150
21350
24950
28650 This is what we have used before but I realize it is anti-novice/tech so
we may use 28450. I really don't expect 10m to be open so it seems to
be a moot point.
29600 FM

This will be the 86th burning of the Texas A&M Aggie Bonfire. The bonfire
symbolizes the Aggie's burning desire to beat the hell out of T.U.
(University of Texas). Bonfire is constructed during the latter part of the
fall semester and burned the night before the annual football game between
these traditionally rival football teams. This year, the football game will
be at Kyle Field in College Station and you can watch it on ABC at 2:30 pm
central time. Bonfire has been shown on the Prime Sports network (formerly
HSE) and may be shown around 8pm central Dec. 1. The bonfire site is in the
polo field of Texas A&M in the northeast corner of campus. When the Aggies
beat the Longhorns, they will claim the Southwest Conference Championship
with a 9-2 overall record and 6-1 in the conference. For a current picture
of bonfire on the internet and other bonfire information see the URL
http://entcweb.tamu.edu/camera.htm
To view it on CU-SeeMe, check out mbone.tamu.edu or entcsun.tamu.edu.

If you make contact with our special event station and would like to receive
a certificate, please send your QSL along with an SASE in an 8.5 x 11 inch
envelope to:

The Texas A&M Amateur Radio Club
P.O. Box J-1
College Station TX 77844

Remember to send it SASE!

2667. 6m opening 11/26 0046Z

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-25 00:00:00 UTC
From: fedpress@omnifest.uwm.edu
Message-ID: <498lua$ohg@omnifest.uwm.edu>
Source record: 234898

Did anyone else catch the (apparently brief) 6m opening Saturday evening? (Around 0046Z, 26 Nov.) I suddenly worked from here in Milwaukee (EN62) to N0IPL in northern New Mexico (DM76). Although I heard N0IPL working other stations (so many, in fact, that he asked me to QSY up to 50.150 to avoid the QRM during a later QSO), I wasn't able to work anybody else. I did hear a few others, including somebody in Arizona. N0IPL said the opening extended into WI, MN, IL and MI.

I'd be interested in hearing from anybody else who got in on this one.

Saying HF is too crowded is like saying the roads are too crowded. It depends on where, when and one's own definition of "crowded". Personally, I find there's lots of space available on HF except as you say, during certain contests -- and even then the WARC bands are a contest-free zone.

Incidentally, in your post you mention bandwidth figures of 3 kHz for SSB and 1 kHz for CW. Both of those can be done with significantly less, especially CW. RTTY (my personal favorite) only takes up 250 Hz, and the 'TOR modes only a little bit more. Perhaps this is part of your difficulty?

Marc,
There is a Telnet site that you may be able to use to find your
latitude and longitude. It is:

telnet martini.eecs.umich.edu 3000

and it features statistics (population, latitude, longitude, etc.) for
many good sized cities. However, it is NOT comprehensive. You may also
be able to find out the lat./long. from your post office - most of them
have this information on file. If not, check your nearest outdoor goods
store (camping and hiking) for a topographical map of your area.

Once you have this information, you can use a number of programs to
convert to the grid square (see ftp.barc.org, in the directory
/pub3/hamradio/arrl/bbs/programs, files named grid*.*).

Keep in mind that the "sub-grids" (the two letter suffix) are only
accurate if you have the precise lat./long. for your QTH. However,
these subgrids are only used for a few specialized contests - most
folks only need the standard 4 digit grid square.

2677. Growth Pattern

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-25 00:00:00 UTC
From: k0hb@hamlink.mn.org
Message-ID: <817319124.AA04371@hamlink.mn.org>
Source record: 234908

The decade of 1986 through 1995 saw growth in our ranks to
the tune of 66.6%. The pattern, which most of us probably would
think was almost solely due to the new Technician license,
is actually more diverse than I expected.
Certainly the Technician class has been a major and welcome
contributor to our growth. A decade ago there were no codeless
Technicians, and today they comprise 20.6 percent of the
total licensees.
In each class the growth patterns are as follows:
- -
Class 1986 1995 Gain/Loss
Extra 40,455 71,900 (+31,447)
Adv. 98,294 117,398 (+19,104)
General 116,944 130,021 (+13,077)
Tech+ 86,025 139,529 (+53,054)
Tech 0 145,193 (New Class)
Novice 79,359 97,468 (+18,109)
- -
There was no class which lost numbers, and the heaviest
relative growth was in the Extra (77.7%) and Tech+ (61.6%)
classes. The General class was the slowest growth class,
both in numbers and percentage.
No, I'm not a statistician, so I don't know what all this
really means. The growth in Novice, coupled with the
popularity of Tech and Tech+, clearly means a lot of
newcomers to our ranks.
Beyond there, I suspect the slowness of General growth
reflects a tendency "not to stop, but to upgrade" because
very few newcomers go directly to Advanced or Extra, and thus
drain down the numbers in lower classes. This suggests General
may be just a "stepping stone" and does not retain its input
well. The over 50,000 new Extra/Advanced licensees probably
moved "through" the General class over the decade.
Most interesting to me, however, was the healthy growth of
the Novice class. There are more new Novices than new Generals!

I am interested in information about what might cause a 12 volt lead-acid car/truck battery to explode. The battery is labeled as a "Power Trust 60" and was the old design where the user should add water. The battery exploded when the truck engine was off, and it was not being jumped. The truck was parked, and the occupant would turn the engine on about once every twenty minutes or so to warm up the passenger compartment. The battery exploded several seconds after the hood was raised. Who manufactured the battery and why did it explode?

Organization: Destructive Testing Systems

In article <494maj$l8n@giga.bga.com> kk5dr@bga.com writes:
>I have a few statements & questions to make;
>First off I am only talking about the HF AMATUER SPECTRUM now. Here's how it breaks down;>(1) The total HF radio specrtum usable for AMATUER operators is; 3.750 mhz>(2) Accordding to the ARRL band plan(gentlemens agreement) SSB is; 1.973 mhz>(3) CW is; 1.198 mhz
>(4) Using these figures, there is theoredical maximum usage level for HF, being; 1,856 qso's
That's obviously wrong, so there must be something wrong with the assumptions which follow (and there is).

>(5) SSB 1,973khz divided by 3khz = 658 qso's

But realistic on air experience shows that spacing need only be about 1.8 kHz for signals of equal strength. That gives 1096 QSO slots, and with a minimum of 2 amateurs required for a QSO, that accomodates 2192. But that number is also much lower than actual on the air experience supports, so there's still something wrong with this (see below).

>(6) CW 1,198khz divided by 1khz = 1,198 qso's

OOK Morse signals are non-overlapping at a spacing of 400 Hz, and operators have found in practice that spacings as little as 250 Hz are usable at slower speeds.

>(7) Hence 658 + 1,198 = 1,856 total qso's

If we accepted your assumptions so far (with the corrections noted) we'd have 4588 amateurs in QSO at once in mixed SSB/CW modes totally filling HF. But actual on the air experience shows that not to be the case, so there is still something you are missing (see below).

>I know this does not take into account for propagation, but that's beside the point,
Ah ha, now we find the fatal flaw. Propagation *does* matter. In fact it matters a *lot*. Notice that the band filling SSB count above was 2192, but that assumes that all signals (from anywhere in the world)

have equal strength at your receiver. They don't. If there is only
a 12 db difference in signal strength, QSOs can be carried on simultaneously
on the same channel by more than one pair of stations. Differences in
propagation from one path to another are *frequently* 12 db or more,
so your counts really only apply to the local area. The frequencies are
reused again and again in different areas along different propagation
paths.

>there are 750,000 hams
>in the U.S.A., and if only 10% = 7,500 were to get on HF, the bands would be
over flowing.>If only 1% of them were on SSB, it would be too many.

But of course there are about 260,000 amateurs in the US licensed to
get on HF, and according to the latest figures released by ARRL, 79%
of them operate SSB (and about 2.5 *million* amateurs in the world,
with a majority of them able to get on HF). Now since the bands *aren't*
congested past using, your scenario falls flat on its face. The most
extreme situation happens annually during Field Day. There are many
more than 7500 amateur stations on HF on that day, but still there are
some pretty impressive scores rolled up, so the bands are certainly
usable under extreme pressure.

>I here all the talk about needing more hams, WE NEED MORE HAMS, or ham radio
will die!>You must look closely at who is saying this, and why.
>If it's so important that we have "so many" new hams, then set a goal, the
"majic" number, that if we reach >it, hams radio will be in no danger of
dieing.>My question is; What is that "MAJIC" number, how many is enough, what
is a "healthy" growth rate?
A number that represents effective political power is 3 million (see NRA).
More would be better, but 3 million should be adequate. A healthy growth
rate is one which results in amateur radio operator demographics tracking
the demographics of the US population at large. That hasn't been the case
since 1968, but things are turning around a bit now and the average age
of the amateur population is no longer increasing at a rate of nearly
one year per year (which represented a greying (and dying) of amateur
radio which could not be sustained over the long term).

>Anyone who listens to HF on a weekend, knows what I'm talking about, GOD help
you if there is a contest>running(and when isn't there one) on a weekend that
you want to get on the air.
Then I'd suggest you need to sharpen your operating skills. Certainly those
participating in the contests have, since they are effectively communicating.
If you can't, you're doing something wrong.

>The first thing any of you are going to tell me is; Go on vhf/uhf etc. That
is not what I became a ham for,>my goal was HF, where DX is "reliable" on a
given band. That is also the goal of most of the hams out
>there,

Actually, if Dx were *reliable* it wouldn't be a challenge now would it?
And Dxers wouldn't bother competing for awards now would they? This all
sounds like you've never really operated much at HF.

>if not, why bother with having different classes of licenses,

Now there's a good question. Why indeed do we bother with having different classes of licenses? I can't think of a good reason. (I've heard several *bad* reasons, but not any good ones.)

>there needs to be a "clear" set goal,
>for advancement, & added privleages rewarded for it, otherwise, what's the use in all of this?!
Maybe radio communication and experimentation? If the only point of amateur radio is the passing of exams, then indeed we should ask what's the use of all this?

Gary

SB PROP ARL ARLP049
ARLP049 Propagation de KT7H

Average sunspot numbers for the past week were about double the
week before, but solar flux was slightly lower. While we expect
the two major indicators of solar activity to track together, they
often don't.

Solar flux is a measurement of 2800 MHz energy from the Sun, which
seems to correlate with ionization of the ionosphere. Sunspot
numbers relate to the size and number of visible sunspots. One
example of the two not tracking exactly is the forecast for the end
of this solar cycle and the beginning of the next. Solar flux is
currently expected to reach minimum between January and February of
1997, while the minimum for sunspot numbers is predicted for April
through June of 1996. Part of this may be due to the fact that the
solar flux has been tracked for fewer cycles than the sunspot
number, so the amount of data going into the projection is
different.

Over the next few weeks solar activity is expected to stay low,
with solar flux possibly peaking slightly in the mid to high
seventies around December 6. Disturbed conditions from a weakening
coronal hole are predicted for November 27 through 30. Look for
very stable conditions from December 7 through 9 and again after
December 16.
```

Sunspot Numbers for November 16 through 22 were 49, 47, 61, 15, 15, 11 and 13, with a mean of 30.1. 10.7 cm flux was 75.9, 75.1, 75.1, 74, 73.2, 72.8 and 73, with a mean of 74.2.

The path projection for the CQ Worldwide CW Contest this weekend is from the center of the United States to Europe, East Asia, Africa, South America, Central America and the South Pacific.

To Europe, check 80 meters from 2230z to 0830z, 40 meters from 2130z to 0000z and 0530z to 0930z. 20 meters should be open from 1500z to 1630z.

To East Asia 80 meters should be good from 0730z to 1400z, and 40 meters from 0630z to 1530z, with weaker signals from 1200z to 1230z. 20 meters looks good from 2130z to 2230z. 15 meters might be open around 2200z.

To Africa 80 meters looks good from 2300z to 0300z, 40 meters from 2230z to 0000z and 20 meters from 1500z to 2030z. 15 meters may have an opening centered around 1800z.

To South America 80 meters should be open from 2330z to 0930z, 40 meters from 2230z to 1000z, 20 meters from 1430z to 2230z and 15 meters from 1630z to 1900z. 10 meters may be open some days from 1830z to 2000z.

To Central America check 80 meters from 2300z to 1230z, 40 meters from 2030z to 0030z and again around 0700z to 1600z. 20 meters should be good from 1600z to 2100z, and 15 meters may be open some days from 1800z to 2030z.

To the South Pacific check 80 meters from 0930z to 1330z, 40 meters from 0930z to 1400z and 20 meters from 1530z to 1800z. Check 15 meters around 2100z to 2230z. On some days 10 meters could open around 2100z to 2200z.

Hi:
I aquired this 1957 vintage wide band transceiver. It covers 38 to 55 MHz. It has a 28V inverter which it attaches to. A schematic of the inverter is in its case. Does anyone know any specifics on this radio? I pretty sure its FM, but it seems to be very weak. (less than a watt)
I also have a module for 27 to 39 MHz. That seems to work too, but also very weak. Are these limited to this low power? Could they make a 6 meter packet/voice station?
Any replies appreciated.

Would anyone like to try some really high speed CW (machine sent and received of course)? My KAM manual says it will send and receive up to 99 words per minute, and I think it'd be fun to try it out. Other TNCs can probably do it as well.

Please email me at the address below and let's set up a sked. I'm in the Seattle area.

73, Bill W7LZP

Hi!

Does anybody know, what following is worth:

Heathkit SSB Transceiver Model HW-100
with Assembly Manual

somebody must have modified it or so, because on the top of the large piece, there is a hole cutout and in the hole is another piece coming out. I don't know if it works, there is no Power cabel.

Any help would be appreciated, or if somebody is interested in it, please make me an fair offer.

Thanks
Johanna

Just a quick note on noise-generating matching devices..while they work well I have found them to be useless on an active band. The noise level is often well below the ambient signals and noise, so you can't hear well enough to find the null. It works well on a quiet band, but don't expect it to be too helpful i n the midst of working a rare on.

I have an article which describes 2 mods to the KW TS450/TS690 series radio. One is well documented which I have done, the other simply says to remove diode (if my memory is correct) D19 in the PLL circuit. It gives no other explanation as to why or what this does. Does anyone know???? If so, I would appreciate a response before I attempt surgery. :-)

Ian:

You've come to the right place to get some pointers but not direct answers.

Begin with the easy stuff...go to your library and get the ARRL (Amateur Radio Relay League) handbook and read the section on radio propagation. That will lead you right into the heart of the problem of moving information by radio -- NOISE. Get the references cited and you'll find all of you answers.

I see only one potential problem...

> I don't really want to know much about the physics of radio communication.
> I am suppose to write about error correction, error detection, and
> physical faults with this communication.

You absolutely cannot know the answers unless you are willing to learn some of the physics of radio signal propagation. What you will find in radio communications is that most coding is done for the purpose of mitigating errors induced by noise and not so much to achieve higher data throughput.

Good luck,

Richard H. / NT2Z

The operative phrase in your question is *without skip*. Expect similar coverage as you've experienced on 2m simplex (FM and SSB). As other post have already discussed, E and F openings can be quite exciting.

: readings by entering your zip-code.

Marc,
There is a Telnet site that you may be able to use to find your
latitude and longitude. It is:

telnet martini.eecs.umich.edu 3000

and it features statistics (population, latitude, longitude, etc.) for
many good sized cities. However, it is NOT comprehensive. You may also
be able to find out the lat./long. from your post office - most of them
have this information on file. If not, check your nearest outdoor goods
store (camping and hiking) for a topographical map of your area.

Once you have this information, you can use a number of programs to
convert to the grid square (see ftp.barc.org, in the directory
/pub3/hamradio/arrl/bbs/programs, files named grid*.*).

Keep in mind that the "sub-grids" (the two letter suffix) are only
accurate if you have the precise lat./long. for your QTH. However,
these subgrids are only used for a few specialized contests - most
folks only need the standard 4 digit grid square.

2708. Re: HF TOO CROWDED?

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-25 00:00:00 UTC
From: Steve Sampson <ssampson@icon.net>
Message-ID: <497hp4$6dp@news.icon.net>
Source record: 234982

The reason most people think HF is too crowded, is they want to set up a NET on a particular frequency, at a time that everyone else is using HF. The band could be dead from 2100Z to 0000Z, but loaded with NETs after that. I think the concept of a NET is so outdated as to be funny in a beserk sort of way. Most sound to be in their 80's, and sucking on an oxygen hose. They visualize themselves as being 20, but don't have any stamina past 9pm local.

Two things would improve HF Amateur 200%. The first is to ban NETs, the second is to restrict contests to a slice. By getting Hams to talk instead of mimicking CB channels, or rabid women at a dress sale, then we will have improved HF, and made it something new licenses would be interested in. Not many modern young people have the drive to be on HF after listening to it for 5 minutes. It's kinda like turning the clock back to 1960 technology-wise, but without the morals or good citizenship. Most conversations turn into 4 letter words after even 5 minutes. When some schmuck from overseas comes on the air, 9000 frothing idiots try to key up at the same time. All to get a postcard with his call on it.

It makes you want to cry, that America even has this many mental cases. What we need is a good drug to fight this addiction. The ARRL is the pusher, so we can't expect them to solve the problem. It needs attention by professionals.

At HF, noise isn't the half of it. Sure, there's a high thermal noise
level, but that's not too serious since signal levels are also high.
More serious, there's natural impulsive noise, selective fading,
which is a killer problem for data, and various manmade sources of
interference. And worse, the channel characteristics change rapidly,
and any successful protocol must adapt just as rapidly.

>
>You must look closely at who is saying this, and why.

I would guess the average age of HF HAMs is 65 years old. 70,80,90 year olds are common. HF HAM population most likely is dropping due to death.

>My question is; What is that "MAJIC" number, how many is enough, what is a "healthy" growth rate?

A healthy growth rate would be when HF ham population was not dropping.

>The FCC says that all the RF spectrum there is, is all there ever will be,
>and as more & more hams come into
>the hobby, the more & more crowded it IS going to get!

There is LOTS of room on uhf/vhf for new hams. I've never seen these bands overly crowded in the largest of cities.

Most new hams are no-code or maybe tech+. I've talked to many who are trying to reach 13wpm, but never find the time to do it.

On the 200mhz, 900mhz, and 1.3ghz band there is virtually NOBODY. Lots of room for new hams there.

One reason the HF bands are crowded now is that many bands are dead due to low sunspot cycle. Things will spread out in a few years.

It would be interesting to get some REAL figures on the HF versus UHF/VHF HAM population growths.

Scene at the Heaton's upon receiving this message.

Phil: "Hey Maw...stop churnin' that butter and come look at this
heah computer pitcher tube...you odda see hal fast at tire Mr.
Fisher came back and boy he shore slammed me!"

Maw: "Why, I declare, son...yo're rahht! Mercy sakes, I never did
make it past the fifth grade readin' 'n writin' class, but that's what
he did, by crackie!"

Grandmaw: "Whut's that yo're sayin...that nice Mr. Fisher you read
about has sent *you* onea them thar computer letters and burn't
you up. He's sure a real fart smeller...er, I mean, a smart feller!
Hehehe!"

Phil: "Mercy sakes...welp I allways save alla his computer letters
offen gnat youzenet, so'z I can read em to my youngens sumday.
He's a teacher of video, and braud castin an all. Why, shoot, I'll bet
he can do all kinds o' fancy talkin'. If'n I could only just meet eem I
bet he cud learn me more about thangs n stuff! Shucks meeybe I cud
far up at old homebrew ham raydeo I built and taulk wif em'."

Maw: "But Phil, yo' got on 'o them thar Fiziks degrees,
don' y'all?"

Phil: "Well, heck, maw...twern't nothin' but a thang..."

Billie Jean: "Shoot, Phil, everyone sez me an' y'all are smarter
than the rest o' the folk around here...Mister Taylor down at the
General Store sez it's 'cause Maw an' Paw are only third cousins!
Whut d'yall reckon he meant by thet?"

Grandmaw: "Well Phil, yo should stop wastin' yo're time with that
consarned skoolin and start talkin' to folk like that nice Mister
Fisher instead!"

Phil: "Okay, Grandmaw...let's see...I think I got some'em HF telly-
phone frequenzies writ' down here somewhere...OK...let's try this
one...3888 Killie-hertzs..."

(Flatulent sound from speaker): "R i i i i i p...." "Hey, John...that was a good one..." (Tuning to another frequency) "So Raymond sez to me, he sez, his prostrate' is actin' up again...and Martha just had to go to get all her teeth pulled..." (Tuning again) "...coming to you from Belgrade Lakes, Maine. Now for the sixth hour of our bulletin session, we're going to be featuring our..." (Tuning) "...WHAT THE $@^$, can you imagine the nerve of that nut callin' CQ on OUR frequency...HEY JACK, we've been having this net on this frequency for the last 25 years...(Still Tuning) "CQ CONTEST, THIS IS WASHINGTON THREE I KILL NOVICES, CONTEST, QRZedd!" (Tuning again) "Then, just the other day Betty called me on the repeater and gave me a new recipe for pecan pie..."

Phil: "Heck fire, Grandmaw...I don't think I can pick up any smart fellers like Mr. Fisher tonight...mebbe I'll have to wait a few years fer when the tin-meter band opens up again, er mebbe I outta get onea em thar tomater rigs, I saw a good'n down at the CB'ers coffee brake thu other day... Hey Paw, pass me the jug!"

Grandmaw: (steping over the numerous hounds in the living room and returning to her rocking chair on the porch, she then replaces her shotgun across her lap, pulls out a snuff pouch, grabs a finger full, and packs it into her lower lip): "Suit yerself, boy...but I still say y'all could larn a thang or two from a smart feller like that nice Mister Fisher...den yo' wouldn't hafta be set'n up all ours of the nite readin nim skool books and take'n nim ole tests n all.."

Billie Jean: "Phil, did y'all say yo' been gettin' mo' computer' writin' offen gnat enternet from gnat Mister Fisher?"

Phil: "Shore, nuff, Bille...'an he sho blasted me with some fast talk! Shoo-weee!"

Billie Jean: "Why Ah Declare! He shore sounds like he's real edukated an all,...betcha' he's good lookin' too...why don't ye invite him to supper sometime...Ah'll make frah'ed possum, corn bread, grits, turnip greens, and a bird pie!"

Phil: "Now Billie...he's probably got hissef a wife already...anyway, I thought youwasa courtin' cousin Clem! Thu church social's next week n all.."

Billie Jean: "Heck fire, I ain't a goin to no mo' dad-durn Church Socials with Clem...all he wants to do is chuck hoss shoes and chug What' Lahtnin' with you an' Paw! Heck-fire, he's bin havin' no time fer me at all, since his sister got back from thuh army. I wants ta meet me a feller with some more modern iders, like that Mister Fisher yo're always talkin about on thet computer thang. Why, I'll betcha he's even got a pulp-wood truck thet don't have no holes in the floor!"

Paw: "That sounds like a good idee, honey...maybe if your brother can git you hitched up with a smart feller lahk thet thar Mister Fisher, y'all could even live down in th' flatlands an' gitcher teeth fixed! Boy, did you see at new hound I picked up from Ran Walker, hits you'rn ye know?"

Phil: "Shore did, Paw...thanks fer fetchin' it fer me! Ah'd a gone
and done fetched it mysef', but I had t' go up th' mountain ta fix
mah an-tenners an' check th' still!

Paw: "Shoot, boy, t'wern't nothin' but a thang! 'An I heered y'all
shootin' at thum thar consarned Revenooers up a thar...so I figgered
y'all'd prob'ly be too busy to git to Ran's fer a couple o' days!"

Phil: "Yo're shore rhat about taht, paw! Well, I got 't git back
to doin' the rest o' my computer writin!"

Maw: "Well hurry up...supper's almost ready...an Paw...go get
Gramdmaw's teeth offen' her dresser, and y'uns go wash up...an
I want y'all to be sure to wash behind yer ears! An Phil, tell that nice
Mister Fisher we're shore proud o him down heer in na foothills."

Phil: "Eye-ite, Maw...ah shore will!"

Hi Robert,

My advice is study for both. If you pass it all (both written elements and the 5WPM Morse) you will get a Tech-Plus license which qualifies you for all the privileges of both the Tech and Novice license.

This will give you local (VHF/UHF) and long-distance (10, 15, 40, and 75-meter) spectrum.

Good luck.

I went to LA once, and brought my HT along. I expected a very crowded band and an interesting evening of listening to the Hams. Alas, it was mostly repeater ID's and kerchunking. There was a couple guys speaking spanish on another channel. After about an hour I just shut it off and went to a bar.

: you think about the advantages of no-code 10 m, and let's see what kind
: of difference we can make!

What is *SO BAD* about learning code at 5 WPM??? 5 is easy.

I am opposed to no-code on HF but I am NOT opposed to 'slow code' on HF.

I think that the 20 WPM code test should be eliminated.

For many, the 4(a) [Advanced] is a very difficult test. I think the next code test should be at the Extra Class level. You can have up to an Advanced class license with 5 WPM code. To get the extra class, you would have to pass the 4(b) written test and pass a 13WPM code test. All existing General and Advanced class licensees and those holding CSCEs for the element 1(b) or 1(c) is credited.

And I suppose the "Dawg" is such a stellar example of all that a ham should be! When you can demonstrate how learning code equates to an indication of being a real ham, you should speak. I'm sure there are technician class licensees who've never been on the air, who can say they've had a more positive influence for ham radio than you can. Want to discuss "Lidcars" as an example why the "Dawg" is such a stellar example?

>I recieved this letter from Mike Whatley:

Regardless of the content of the letter, its a real breach of
nettiquette to post someone's private e-mail without their permission.

If you have no courtesy on the 'net, shouldn't we expect similar
behaviour from you on the amateur bands? Something about a
leopard not being able to change its spots...

>Feel free to put in your $.02

I happen to agree with 95% of what he says. People call the 80's the
"Decade of Decadance". I call the 90's the "Decade of Do-Nothing".
Because, that's exactly what people want to do -- nothing -- yet
they want all the benefits that someone who HAS done what was
required.

Its the welfare-state mentality of this country, permeating
itself into amateur radio. No longer is the handout simply a
check or food-stamps from the government, today people want
amateur radio license handouts. We call those handouts "No Code
Tech licenses".

I've seen better attempts at flame-bait by 5 year old kids.

Normally, when someone does a pathetically poor job at something,
I encourage them to learn some more and try again; but, in this
case, I'll make an exception. If all you want to do is flame
people, try alt.flame.

>-> for SSB without skip.

I have a Motorola Mitrek, 85W (close enough for discussion). I can work about
20 miles direct, more or less. About the same for SSB direct. This is on the
flat, with no significant elevation between the stations.

>An optimum contact would be from where you are in Houston to where I am in

>anyone that does. We sit on 50.125 listening intently for USB. This last
>summer, stations in our area worked Japan, all over North America, some
>even managed Europe.

Last summer, I worked 6 states on 52.525MHz FM (WY, MO!, OR, NV, NM, UT), so I
think we can establish that folks 'listen' for FM DX on 6m. Frankly, though,
I bet most FM DX contacts are folks who normally listen for local stations
who suddenly find themselves talking several hundred miles! And 3 of those
contacts were mobile on one end (WY & MO were mobile to my base; to OR I was
mobile). I imagine there's more FM mobile than SSB. Also, at least here in
Southern Calif., there are many hilltop 6m remote bases, controlled on 440.
Those machines are likely to pick up more DX (by the way, I have talked to
San Diego on a remote base on Mt Palomar; about 80 miles or so).

I do listen on 52.525, but lately I listen more for 50.125 SSB now that I have
the radio for it. If I hear you on 52.525 though, I'll answer!

>6M isn't just for no codes, its just plain fun for all.

You bet!-) 25W into a good antenna will be plenty fun.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 26/2330Z NOVEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 26 NOVEMBER AND FORECAST FOR 27 NOVEMBER - 29 NOVEMBER

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 73/9

GOES satellite data for 25 Nov
Daily Proton Fluence >1 MeV: 2.8E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 2.0E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
27 Nov 28 Nov 29 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 27 Nov: 73/9

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 25 Nov
Learmonth 4 2111 1112
Fredericksburg 3 2
Planetary 2 1

Observed Kp for 25 Nov: 1000 0010
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
27 Nov 10 Quiet to unsettled.
28 Nov 15 Quiet to unsettled with the possibility of
isolated active periods.
29 Nov 20 Quiet to unsettled with the possibility of
isolated active periods.
COMMENT: Brief periods of active levels are expected 28 Nov - 4 Dec.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
26 Nov Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
27 Nov Normal Normal Fair
28 Nov Normal Normal Fair
29 Nov Normal Fair Poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
26 Nov 4

Observed Australian Regional MUFs:
Townsville: 15-30% depressed 11-16UT.
Sydney and Hobart: near predicted monthly values, with night-time Spread F.
Occasional Sporadic E layer was observed at all sites.

Predicted Monthly T index for November: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
27 Nov 10 near predicted monthly values
28 Nov 10 near predicted monthly values
29 Nov 10 near predicted monthly values

It's Called "Lawsuit Protection" when a comapny such as McDonalds gets
sued for a hot coffee spill (for $450,000.00) and Ford Motor Co. gets
sued for the 85 Escort not having an Aibag (when it wasn't even an
option in that year) , they begin to takle Extreme measures to
protect themselves .... that's my guess for the reason some Mfgrs. add
the Negative line fuse and why you see the little notices in McDonalds
windows that say "Caution Coffee Served Very HOT "

Mike Whatley <73057.2225@CompuServe.COM> writes:

>I hope you don't get your ticket for a *long* time. You are not a
>ham until you get the General Class ticket. Tech-lite and the
>No-code tickets are for wanna-be's.

Now Matt, from the best I can tell you were not born an extra. I did some
homework and dug this stuff up:

Call-Sign: WA4D Class: EXTRA
Previously: N4FYC Class: ADVANCED
Real Name: MICHAEL E WHATLEY Birthday: SEP 14, 1950
Mailing Address: 5844 DORIS DR, ALEXANDRIA, VA 22311
Valid From: NOV 12, 1985 To: NOV 12, 1995

And I would like to note that you did remember to renew (very good)

From what I can deduce from the information above you were once N4FYC,
an advanced amateur hummmmmm. So that means that once you were a general,
and at once time a Tech (from the Lic. date that would be an original tech)
and I'll go so far as to wager that you have a license that somewhere says
Michael E. Whatley NOVICE.

My point, every one needs to start somewhere, and I'll bet
you were as excited as the rest of us when your first ticket arrived
(Yes we now know you were not born an extra).

>Upgrade to the real thing or get out of the hobby. We don't need
>anymore pseudo-hams.

No mike what we don't need are more lids, like yourself.
Mike can I point something out. I set the record for the highest frequency
QSO only 1 month and 20 days after getting my license, and I was a
No Code Tech.

IUt is not your license class that determines if you should be in the
hobby, it's the way you operate, and if this is how you operate maybe you
should find a new hobby Mike.

2750. Re: 3.88 MHz sounded like CB tonight: Could be Bur

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-26 00:00:00 UTC
From: Mike Whatley <73057.2225@CompuServe.COM>
Message-ID: <499sgo$fv0$1@mhafn.production.compuserve.com>
Source record: 234933

The numbers speak for themselves----

Over 50% of all hams hold tickets *below* that of General. And
according to the W5YI statistical analysis, less than 20% of
No-Coders&Tech lites upgrade to General or above.

The hobby has been dumbed down to it's lowest common denominator.
It's over. The dying old men of the hobby will wither away, No-code
HF will be a reality by 2000 --- and the farce of amateur radio and
it's racist culture will be gone.

Good Riddance.

> hood was raised. Who manufactured the battery and why did it explode?

Most likly the battery developed an open circuit inside. When it was jostled by the opening of the hood, the circuit was made causing a spark inside the battery ignition the explosive combination of the oxygen and hydrogen gasses inside the top of the battery. This is a very dangerous situation and has resulted in many injuries to persons leaning over the battery while jiggling the posts of a non-functioning battery. ALWAYS throw an old rug or blanket over a battery before disturbing it when the senario unfolds where a battery goes from functioning to total failure.
I have a friend W9NHM, Howard in Park Forest, Illinois who is an expert (retired electro chemist) on this subject. I think that he would be one to talk to. He is usually on 3.875 MHz in the afternoon if you are within 2 - 4 hundred miles.

>>->>>snip

Yeah, they were at it again last night. I enjoy the vintage aspects of amateur radio. For years, hams who operate AM do so in the AM window (3880 and 3885). This has been a long established AM area. Yes, AM is wide, but those who are into this sort of thing stay on these 2 frequencies for the most part. We don't scatter our contacts up and down the bands. Most everyone who knows about the AM windows on various bands observes them. I wonder how the HF amateur population would feel if the AM ops weren't so polite and decided to hold contests/etc. and work the whole phone segment with AM. I don't think AM/Vintage ops are that selfish or impolite, though.

Some time ago, a group of SSB ops decided to "take over" 3878, just 2 khz below the AM window. AM receivers are completely obliterated by SSB signals so close the to operating frequency of 3880. Night after night, they crank their processors up, talk to themselves, play music, and most recently operate AM with everything turned up so high that they were heard 10 kcs in each direction. The guy last night was cursing, and intentionally causing QRM. He was saying stuff like "They need to move. If they don't I'll set up all night and all they will hear will be me",etc. Really sad.

This weekend was the AM Jamboree, with more participation than any other time of the year by AM/Vintage enthusiasts. But "Billy Bubba" and "Jimmy Jack" and friends had to go way out of their way to cause trouble. The SSB guys down on 3875 (who have always gotten along well with the AM ops up in the window) are getting really tired of their antics as well. I simply shut my rig down and left the shack. 40 is much better in the daytime between noon and about 4 pm local, as will be 20 and higher. As before, I didn't hear any stuff from the AM guys (the real AM guys)...all the garbage was comming from the mouths of the SSB guys who were on a mission. The fellow who was trying to run his SSB rig on AM to intentionally cause QRM had a really nasty signal. He kept talking about how much power he had, he could work AM too, etc. He obviously didn't know how to set up an AM transmitter, though.

There are lots of AM folks on 160, so I need to get my antenna up and avoid these types altogether. This is a hobby, and I do it to have

fun...not listen to a bunch of squabbling and profanity from people on a mission.

Source record: 234937

I recieved this letter from Mike Whatley:

Nathan-

<Think about the message you are giving people before you open your
arrogant blowhole. You are entitled to your opinions as LONG as they do
not infringe on others rights, which yours clearly have the intent on doing.>

I plan on sending em a message. Whether it "infringes" on them or not.

The issue is *not* CW. The issue is the dumbing-down of amateur radio. We've
lowered standards for people like you who can't make it. No-Code Tech's are
losers within the Ham culture. You're not a Ham. You're on the bottom of the
heap.

Let's quit this silly exhcange. Upgrade or get out of the hobby. Make a
real
committment so you can become a *real* ham instead of a wanna-be.

I keep hearing all these No-Coders talk about how, "Oh yeah, I'm gonna
upgrade,
and get me a real ticket." But the statistics don't support that.

According to the W5YI statistical analysis over 80% of all
No-coders/Tech-Lites
never upgrade to General or above.

Get off line--- start studying--- or hit the road. You ain't bringing
anything
to the party.--

-mike

Is this the kind of bullshit that makes people want to be hams? This guy
seems to think that instead of encouraging people to upgrade, he will
demean them, and tell them to get out of the hobby.

Feel free to put in your $.02

Nate, KB9LSX

(I didn't print his callsign, because I don't think he should have one.)

Source record: 234696

Folks, I continue to be amazed, almost, at the meanness of what seems almost like tribal warfare in this forum ... pro-code vs anti-code, old-timers vs all others, etc. ... and especially at the frequently clear (rationalized, and thankfully far from unanimous) view that lots of awful people will get on HF (which of course "belongs" to long-licensed General's and above) if code is not retained as a barrier.

Well, I suggest there are lots of awful (rude, opinionated, intolerant) hams on HF already, based on extensive listening. And obviously some of them spread their malaise to this forum.

I got my Tech Plus early this year, and recently returned to the drudgery of learning to transcribe "code" faster, in order to get to General and non-CW HF privileges. I will do that, and not complain much about it, because that is the FCC (should I say instead, the ARRL?) requirement ... though I think CW today is "needed" about as much as a boar hog needs tits. Eventually I'd like to get the Advanced license, though under today's rules I'd not seek Extra. Why? Because after passing General I never again expect to use "code". I won't view code users as oddities or dinosaurs, and will wish them enjoyment in using CW as part of an interesting hoppy, as I equally will wish the non-code people their due enjoyment ... provided, in each case, that they learn and help and communicate in the good spirit which most of us (I hope) want to be characteristic of the amateur radio world.

As for me, I'll continue to read rec.radio.amateur, and perhaps contribute where eventually I can, because because there mostly are good people and good information here. I do wish, though, that the rhetoric would be much less vitriolic, much more civil.

[ID'ing at the Marathon]
-Is it possible they were using the repeater to do the id'ing for them?

Nope. Each transmitter must ID itself.

- I assume the repeater id's every 10 minutes or less, either in code
-or synthesized voice.

All the repeaters were properly ID'ing their own transmitters; I just wasn't hearing any of the *other* stations ID'ing with their own calls, just the tactical calls. Since I wasn't directly monitoring those transmitters, it is possible that they were ID'ing with a different PL or something like that which wouldn't be passed thru the repeater.

In any large event, tactical calls are extremely useful (even more useful than actual callsigns) to the operation of the net. That way there is no reason to remember which ham is stationed where; to talk to checkpoint 42, all you have to do is call checkpoint 42. FCC callsigns are required during the event because they are required by law, and to aid in identifying a transmission if needed (for interference or similar reasons).

In my experience, the easiest way to satisfy both requirements is to sign out with "Checkpoint 42, N1IST clear" rather than just "Checkpoint 42 clear". It doesn't take much more net time, and makes everything legal.

Guess what? We don't WANT to talk to you, Mike! In fact, we would prefer that you take your "superior" license and go play radio with your other "superior" higher-class hams on...say, 14.313 or 75-meters.

Bottom line: you and the rest of your "holier-than-thou" higher-class hams do not own the bands. You can't compete with us and you know it... the raw numbers of no-code Techs are more than all the other classes combined. Soon, no-code HF access will be a reality. The masses will demand it. I only bring that up because I know how much it eats at YE OLDE FAHRTZ like you who think that amateur radio is their own little "private club", reserved for those who have passed a code-sending test and traveled hundreds of miles to the FCC offices 400 miles away (back in 1948) to get their licenses. Sorry, the times have changed...and you have two choices: either deal with it and change yourself accordingly... or else get out of the way before you get run over.

The next test session sponsored by the Mid-Atlantic DX & Repeater Association will be held on Saturday, December 16 at 10 AM. The location is St Paul's United Methodist Church, 51 South Main Street, Smithsburg, MD. Applicants should arrive no later than 9:30 AM.

This is an ARRL VEC test session. We request the following:

Pre-Register at the MADRA Voice BBS 301-416-8447 box 110 or via INTERNET at WB8VBW@aol.com.

Bring your original and a copy of your ham license if any.

Bring your original and a copy of any active CSCE.

Bring your pencils, calculator etc.

Bring two forms of ID

Bring your check for 5.90 made out to MADRA VE Team.

73

See you there...

That's funny! I thought that an Extra class ticket included all privileges of
lesser class licensees, including Novice CW bands. I could have sworn
that I have heard some hams with "Superior" tickets talking to Novices
on our local 220 Mhz repeater.

Gee! I guess they are doing something wrong if the Novices and Techs
I hear talking to "Superiors" are doing so without upgrading! We should
get the radio police on their tails immediately to stop this insanity!
I better stop talking to my no-code tech XYL before "Superior" license
holders come after me with their D104 microphones and beat me!
Wow! Do you think an Extra class holder will actually talk to a lowly
Advanced holder like me. Maybe I will be lucky and they will lower
themselves by talking to me on 7.200 Mhz! Golly gee! I can't wait!
Wholy mackerel! I get to talk to a "Superior" ham!!!!!!

I'd like to declare Mike Whately one of the lamest bastards on the net as a result of his previous postings about people below general class, and as a result of his attacking burt fisher in a VERY uneducated and immature manner. I'll admit that I have not agreed with everything that Burt has said, but I think that mike's flame was totally uncalled for, and just shows what a fool he is.

A double fuck you to Mr. Mike Whately.

Nate, KB9LSX

The FCC could care less! The problem is the international agreement...
although we've seen lots of progress lately in this area; England and New
Zealand, for example. Also the no-code HF license in Japan.

I forsee a drop to 5WPM for all license classes initially (which would
satisfy the ITU), and then abandonment of the Morse requirement all
together.

Again, it's only a matter of time. Deal with it, YE OLDE FAHRTZ!!

Special Bulletin 69 ARLX069
From ARRL Headquarters
Newington CT November 27, 1995
To all radio amateurs

SB SPCL ARL ARLX069
ARLX069 Writer Frank Jones SK

Frank C. Jones, W6AJF, died November 5, 1995, in Sonoma, California. He was 91 and a prolific radio experimenter and writer.

The Sonoma Index-Tribune said he was a ''life-long ham radio operator'' and active until a few years ago, according to a close friend, Robert Townsend, K6OHE.

After graduating from the University of California at Berkeley in 1925 with a B.S. in engineering, he worked for Pacific Telephone and Motorola before becoming a full-time independent consultant in 1931.

Among his many inventions, he is credited with designing and building the first ac/dc radio, the newspaper said.

He wrote a number of books for amateurs, published by the Pacific Radio Publishing Company (publisher of ''Radio'' magazine in the 1930s), including works on ''5 Meter Radiotelephony'' (forerunner of the current 6-meter band), ''Amateur Radiotelephony,'' antennas, modulation methods, ''The Radio Amateur Newcomer,'' ''The Jones Radio Handbook, ''Ultra-High-Frequency Handbook,'' and ''VHF for the Radio Amateur.''

Among his survivors is his wife of 70 years, Edith.

Hi. I'm in the market for a radio which will allow me to:

1) Listen to space shuttle / mission control voice transmissions (I'm near Livermore, California... over a small mountain from the SF bay area).

2) Pick up emergency information after a natural disaster (an earthquake, in my case).

Would a scanner or shortwave receiver be the best solution for me? Any suggestions about what I should look for will be greatly appreciated. Thanks!

Formulas where ever posable ie:
All repeaters input to output will be between 5 and 10%
modulation baudrates = 0.01% of the frequency
meters to frequency= *300 (look for the X.1mhz)
frequency to meters= /300 (look for the XX.1mhz)
1/2 wave feet=468/f (in inches *12)
1/4 wave feet=234/f
refelectors on yaggis are a little longer than 1/2 wave (5%)
directors are shorter
npn=not pointing in
And when studying never read the wrong answer!!!
The wrong answer will be seen only during testing,
and in most cases wont make sence!

I have been helping kids 10-17 years they seem to get it easy'ly
my 10 year old son KE6YPQ took 2 tryes each novice, tech. and 15
to 20 hrs total study

>cww/ssb transceiver?
>Tom/NU4G

Hi Tom. Have not ran across anyone using the new MFJ 6 meter rig
myself but did read about it in my new AES catalog. Looks pretty nice
except for analog dial. Wish they had incorporated digital readout but
I suppose to keep the cost down they had to go the analog route.

The 50.1-50.3 is fine. Most SSB activity takes place between 50.125
and 50.200 so you would be right in the ballpark. However you would
not be able to monitor the 6 meter beacons as they are located in the
low end of the band between 50.010 and 50.100 or thereabouts.

The 10 watts output is just right for driving an external 6 meter
amplifier such as that produced by Mirage and TE systems.
The 6 meter band is funny. When it's open good you can work the
country on a couple of watts and a dipole or vertical. I have done it
quite a few times so during some good sporatic E in the spring and
summer months 10 watts should provide you with alot of Q's.

Ten Tec puts out a 6 meter transverter kit that runs 8 watts output.
Several guys I have worked using them like them very well. So this may
be another route you want to explore. I dont know of anyone at this
time producing a 6 meter xcvr in kit form. You never can tell though,
maybe MFJ will put there rig out in kit form in the near future if
they have enough requests for it.

As far as antennas go, for SSB/CW a horizontally polarized antenna is
the standard but during hot openings I have worked fellows using
verticals with equally good signals. Keep in mind what goes up comes
down hyperbolic !

Cheers !

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 27/2330Z NOVEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 27 NOVEMBER AND FORECAST FOR 28 NOVEMBER - 30 NOVEMBER

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 71/6

GOES satellite data for 26 Nov
Daily Proton Fluence >1 MeV: 3.3E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 1.9E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
28 Nov 29 Nov 30 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 28 Nov: 72/8

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet 00-06UT, and mostly active to
major storm thereafter.

Estimated Indices : A K Observed A Index 26 Nov
Learmonth 24 2246 4342
Fredericksburg 20 1
Planetary 20 1

Observed Kp for 26 Nov: 1100 0000
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
28 Nov 20 Quiet to active.
29 Nov 15 Quiet to active.
30 Nov 10 Quiet to active.
COMMENT: Geomagnetic activity was greater than expected yesterday for
the current period of recurrent activity.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
27 Nov Fair-normal Fair-normal Poor-normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
28 Nov Normal Fair Poor
29 Nov Normal Normal Fair
30 Nov Normal Normal Fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
27 Nov 24

Observed Australian Regional MUFs:
Townsville: 30-50% enhanced 07-14UT.
Sydney: 15-30% enhanced 06-11UT, then 15-30% depressed 17-20UT.
Hobart: near predicted monthly values.
Occasional Sporadic E layer was observed at all sites.

Predicted Monthly T index for November: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
28 Nov -10 10-30% depressed during the local day and near
predicted monthly values thereafter.
29 Nov 10 Near predicted monthly values.
30 Nov 10 Near predicted monthly values.

James E Muehlberg (muehlber@plains.nodak.edu) wrote:

: It's unfortunate that this tirade must continue.

True!

: Even more unfortunate
: that our younger readers must be exposed to this behavior by, I assume,
: adults.

Youngsters seem to (usually) be more sophisticated and sensible than
adults (usually) credit them with.

:I do not know Mr. Fisher, and even if I did, I would not comment
: about him on the net.

Your restraint is commendable, though, as yet, untested.

: Making personal attacks on people in public is
: just plain tacky.

Engaging in a little banter with a wind-up merchant is not quite the
same as no-holds-barred-go-for-the-jugular hatred propelled flame wars that
sometimes erupt. May I suggest you read Burt's earlier postings? He's
quite right about there being plenty of boring radio amateurs (I may be
one of them..), but, unfortunately, he forgets those who do not fit his
stereotypes, and lumps everyone together. He seems to be having fun
stirring people up. While I've enjoyed watching this, I did consider his
remarks about Germans to be unreasonable and tasteless.

:Do I sound like your mother?

No

: Well, yes. There is an
: absolute right and wrong. You are wrong.

Your opinion is that *I* am wrong. I do not believe that I have any
right to declare anything to be absolutely right or absolurely wrong.

: God gave us free will, though,
: but some still dont know what to do with it. I'll pray for you.--

Thank you, but please do not. I think it most important that people
take responsibility for their thoughts and actions, and, if ever judged, I
should be judged fairly on my own performance without aid from others.

Cheers

You might try Palomar Engineers! They sell them for a buck each.

Just make sure to turn the Tuner Tuner OFF when you are properly tuned up
on frequency. Then you shouldn't need any fuses.

I have got a broken linear amplifier. In it's previous life it where located in the attic, close to the antenna and served it's masters well until the roof broke and rain water dripped into the operating amplifier.

Mixing rain water, 2.5KV, HF and TTL-circuitry turned out to be fatal...

It's manufactured by "Advanced Radio Devices" that used to be in Sterling VA, USA, apparently they are out of business since several years now. The model number is 230C

I have a manual, but for some reason they decided to not include all circuitry that has to do with communications between the actual amplifier and the remote control box (wich has a Z-80 microprocessor).

I'm trying to find the missing documentation of the hardware, and some insight to how the program actually works, so I can diagnose the IO-circuitry. If the SW has any diagnostic/production testing routines that could be handy etc.

If I manage to get this working I assume that all of it including the tuning presets has to recalibrated, but how?

Any information or leed to anyone who might know, would be most appreciated. (as a private email or call)

You may also find that any nearby source of RF energy, including an AM broadcast, amateur station, or semi-legal CB operator can introduce enough RF to seriously alter the apparently correct tuner settings. Palomar probably did mention this in their product manual, but the reviewer did not.

thank you christopher!

now that the ethical police have had a say, how 'bout that original poster?

do ya got your ears on??

is there anyone else with information about the question:

??
Can laser speed recording device readings be confused with infrared light??

>I know this does not take into account for propagation...

I used to think the HF bands were a crowded mess. Of course that was
when i was trying to use a Yeasu 757...

1.8 to 2K is kool for SSB (well, except with my 757 10K wasn't enuf :)

I've heard many CW contact made with WAY less than 1K. Heck even i can
hear the difference in between two signals of similar amplitude and 30
cycles apart.

Propagation is extremely significant! How can you ignore it?

2815. Digest of Articles - QST Oct 95 (Long - 49k)

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-27 00:00:00 UTC
From: wvanho@infinet.com
Message-ID: <49cbee$sj3@horus.infinet.com>
Source record: 234876
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the October, 1995 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. They are archived, beginning with the January, 1993 issue, and available by ftp from:
(USA) oak.oakland.edu/pub3/hamradio/arrl/infoserver/digests
and
(Europe) ftp.funet.fi/pub/ham/arrl/infoserver/digests

It is hoped that other hams will volunteer to post similar digests of the other ham technical publications such as QEX, CQ, 73, COMMUNICATIONS QUARTERLY, RTTY JOURNAL, et al. Especially desirable would be digests of publications in other countries, such as the RSGB RADIO COMMUNICATIONS and ham magazines in Europe, Japan, Australia, and other countries around the world. We English speakers would especially enjoy them if they were translated into our language, but they would also be valuable additions to the world's knowledge if they were posted in the language of origin. Who knows? Some bi-lingual ham somewhere might translate them into English and re-post them.

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:The Offset Multiband Trapless Antenna (OMTA)
Author>Wilson, Robert - AL7KK
Source>QST Oct 95, pp. 30-32
Abstract>Describes a vertical antenna with 3 radiators: 1/4-wavelength on 40-meters, and 1/2 wave on two higher bands. Only the 40-meter element is driven; the others are excited parasitically.

Digest>AL7KK's antenna design is made up of three vertical aluminum-tubing elements for three bands: either 40-, 20-, and 15-, or 40-, 20-, and 17-meters. They are erected close together, somewhat like the three vertical members of a triangular tower, about 8-inches (20-cm.) on each side. They are held in place by four triangular spacers made from 1/2-inch (13-mm.) thick plastic carving boards. At the base, three floor flanges are fastened to a base plate, made of either wood or carving board material. A pipe adapter, that makes a mechanical transition from the screw thread of the flange to a compression fit on a short length of PVC pipe, is screwed into each. The tubing forms a base insulator and the elements are fastened inside it with machine screws. The assembly is guyed using three lengths of nylon rope fastened near the top of the shortest element.

Only the 40-meter element is directly driven. The other two are electrically isolated and obtain drive through inductive coupling from the driven element.

The 40-meter element is a quarter-wave monopole with four quarter-wave radial wires strung along, or underneath, the ground. The feed arrangement is unusual; power is applied not at the base junction between the radiator and radials, but instead, at a point 14-feet, 9-inches (4.50-m.) up from the base. At that point, the element is cut and separated by about an inch (25-mm.), inside a piece of PVC tubing used as an insulator. The shield braid of the coax is attached to the lower piece, and the center conductor to the upper piece, of the element. At the base, the element is directly connected to the four radials.

The 40-meter element is 36-feet (11.0-m.) long, in the author's case, but must be tuned to exact resonance through pruning to a length dependent upon the immediate surroundings. AL7KK recommends that pruning be done in 3-inch (76-mm.) increments. His dimensions for the higher-frequency elements are as follows: 20-meters: 33-feet, 2-inches (10.11-m.); 17-meters: 26-feet, 1-inch (7.94-m.); 15-meters: 22-feet, 5-inches (6.70-m.). All act as half-wavelength dipoles. The author assembled all his elements using 12-foot (3.65-m.) stock lengths of tubing, spliced together with 8-inch (20-cm.) lengths of smaller diameter tubing slipped inside and held in place with screws.

The combination of the offset feed to the driven element and the inductive feed to the other elements provides a 50-ohm load that is remarkably flat across all three bands. The end result is a very effective multi-band antenna that also makes a neat and attractive appearance.

Title>TA2:Spectacular 1995 Transatlantic Sporadic-E Season
Author>Pocock, Emil - W3EP
Source>QST Oct 95, pp. 33-37
Abstract>A systematic study of transatlantic sporadic-E propagation during June-July, 1995.

Digest>Sporadic-E propagation is caused by clouds of ionized air that intermittently form in the E-layer of the upper atmosphere, and reflect radio waves at HF and VHF frequencies. Unlike normal F-layer propagation, these ion clouds are not strongly correlated with sunspot activity. Their appearances in time and space are almost completely random, except they are most numerous around the summer solstice; in June and July in the Northern Hemisphere.

Mr. Pocock - W3EP, who is the conductor of the regular QST department: "The World Above 50-MHz", has been making detailed studies of amateur sporadic-E communication for 15-years, or more. The successful trans-Atlantic communications that occurred during the summer season of 1995 represented the greatest number of contacts and the greatest distances registered so far.

The normal limit to the distance covered by sporadic-E propagation in a single hop is about 1430-miles (2300-km.) Many of the QSOs registered this year between North America and Europe spanned such a distance that they clearly required four hops. Many of these were from Eastern USA to Eastern Europe, or Mid-Western USA to Western Europe.

Within the last few years, 6-meter DX contacts by this means of propagation have increased greatly. Much of the reason is that the band is open to amateurs in many countries where it was previously forbidden. Also, more high-power stations with large antennas have been coming on the air. It is not possible, yet, to determine whether the explosion of activity during this year's peak season was due only to those causes, or whether there was some phenomenon occurring in the atmosphere that made this season so much more active than ever before. Only continuing studies in future years will begin to sort out the different factors.

Title>TA3:Hot-Rod Your ICOM IC-725-Series Transceiver - Part 2
Author>Vermasvuori, Jukka - OH2GF
Source>QST Oct 95, pp. 38-41
Abstract>Describes modifications and additions to the IC-725 to overcome shortcomings described in Part 1 of this article.

Digest>Part 1 of this article, in QST Sep 95, described OH2GF's findings of performance shortcomings in his ICOM IC-725. Among the factors that he found most deficient in receiving were the Automatic Gain Control (AGC), the wide apparent bandwidth of strong signals, and the automatic level control (ALC); in transmitting, the lack of r.f. speech processing. In this article he describes the design and construction of additions and/or modifications to make the rig perform the way a modern transceiver should. Each modification or addition is illustrated by a schematic diagram and parts list.

The first is a simple "hang" AGC system. This kind of AGC differs in the following way. When a standard AGC circuit receives an incoming signal, it generates a proportional control voltage; after the signal ceases, the control voltage gradually decays to the no-signal level. In the "hang" type, the control voltage responds to the onset of the signal in the same way, but holds constant for a preset length of time, then quickly drops to the no-signal level.

The wide apparent bandwidth is an effect that is most annoying when one is receiving weak signals through a continuous line noise. Like almost all modern transceivers, the IC-725 has a noise limiter that is quite effective in reducing pulse-type line noises. However, if a strong signal appears outside the i.f. bandwidth but within a few KHz. of the desired signal, often the line noise is perceived to be surging to high values in sync with the modulation of the unheard strong adjacent signal.

This effect is caused by the fact that the filter in the first i.f. is 15-KHz. wide, to allow for reception of wide-band FM. But the signals fed to the noise-blanker circuit are derived from the first i.f., so a strong signal even 5-KHz. away from the desired one, in effect deenergizes the blanker. Since OH2GF did not intend to listen to FM, he replaced the "roofing" filter with a narrower one. The one he selected is a replacement part available from ICOM, their Part No. FL-116.

ALC in the transmitter is essentially the same function as AGC in the receiver. The ALC system in the IC-725, as manufactured, contains certain time constants that cause unwanted phase shift resulting in audio distortion. The author improved the situation by changing certain resistor and capacitor values, which he describes in detail.

In his final modification, he overcame the serious lack in the IC-725 of a speech processor. Modern information theory shows that the human voice is a very inefficient "code" for transmitting information. When raw, unprocessed speech is used to modulate an SSB transmitter, the ratio of peak-envelope power (PEP) to average power is some 15-dB.; hence, when one is transmitting SSB at 100-watts PEP, the average output power is 3.2-watts! By clipping the audio 20-dB., one can raise the ratio by about 6-dB., four times the power. Then the average power output is 12.8-watts, a very significant increase although still far below the level of CW or digital modes. Accordingly, Mr. Vermasvuori designed and built an r.f. speech clipper on a small circuit board and installed it in the rig.

Although his modifications were designed and built for the IC-725, there are few modern transceivers that would not benefit from one or more similar modifications. As he stated: "...the fundamental radio performance of even our best transceivers (is) poorer than it should be".

Title>TA4:Twisted-Pair Controls Switchable, Remote Loading Network
Author>Lee, Mitchell - KB6FPW

Source>QST Oct 95, pp. 42-43
Abstract>Construction details of an antenna with remotely-controlled switchable loading network for tuning to several bands.

Digest>In this article, KB6FPW describes the antenna that he uses to operate on the bands from 160- to 30-meters. It is an inverted "L" with essentially no feed line. The single conductor begins at the output terminal of his antenna tuner inside the shack, passes out via a feed-through insulator to the outside, and upward to the base of a 20-foot (6-m.) steel TV mast on the peak of his roof. At the top of the mast is a plastic housing that contains loading coils and a remotely-activated switch to select various taps on the coils. From there, the antenna continues as a horizontal wire, 33-feet (10-m.) long, to an elevated support.

The remotely-activated switch is a Guardian IR-705-12P-12D Rotomite stepper relay. It contains twelve contacts selected by a wiper that indexes ahead one position each time the coil current is pulsed. Since the author has no indicator in his shack showing its position at any one time, he wired a beeper to be activated by the twelfth switch position. In changing settings, he pulses the switch until the beeper sounds, thus "zeroing" the switch, then counts the number of times that he presses the activating button to select any particular position.

To run the control system, he needs three leads carrying 12-volts d.c. to the top of the mast. He uses the mast and the antenna wire for one of the conductors, and runs a single twisted pair up the inside of the tubing for the other two. From the base of the mast down to the shack, the twisted pair is run together with the antenna wire.

He uses two loading coils, wired in series, with taps. One has 100-microhenry inductance, and the other 7. Both coils are used when tuning 160-meters; for 80-meters, only the 7-microhenry coil is in the circuit; for 40- and 30-meters, intermediate taps are used.

Title>TA5:A Patch Antenna for the Global Positioning System
Author>Ward, Harold R. - W1GE
Source>QST Oct 95, pp. 44-45
Abstract>Construction details of a simple antenna for GPS signals.

Digest>The Global Positioning System (GPS) is coming into use by amateurs for various purposes, including the Automatic Packet Reporting System (APRS) which was described in QST Jul 93 by WA1LOU, and in other articles. Also, the Product Review of this issue contains relevant material.

W1GE describes a small and unobtrusive antenna that he built and attached to the roof of his car to receive GPS signals while it is moving. It is a simple device that forms a circularly-polarized antenna.

The antenna is made of two small pieces of sheet aluminum, or plates, separated a fixed distance by nylon spacers, and held onto the roof by four magnets. A length of RG-58 comprises the feedline to the inside of the car.

The two plates are known as the groundplane and the patch. The dimensions of the latter are very critical; those of the groundplane considerably less so. Five holes are drilled through both plates; four at the corners for the supporting bolts, and one precisely located for attaching the center conductor of the feedline. Its location causes the antenna to exhibit right-hand circular polarization.

As assembled, the patch is held to the ground plane with No. 8 nylon bolts and nuts, and the separation between plates is determined by the thicknesses of three No. 8 nylon washers stacked on each of the bolts. The shield braid of the feedline is connected to the underneath side of the groundplane and the center conductor is fed upward through both holes to the top of the patch where the conductor is attached.

Four magnets, at the four corners of the groundplane, hold the antenna to the roof of a vehicle. They must be thick enough to raise the groundplane sufficiently to allow the cable to pass between it and the car roof to reach the feedpoint. To avoid scratching the paint on the roof, the magnets are coated with silicone tub calk.

PRODUCT REVIEW (PR)
Conductor: Mark Wilson - AA2Z
Editor, QST

Title>PR1:QST Compares: GPS-Compatible TNCs
Author>Ford, Steve - WB8IMY
Source>QST Oct 95, pp. 68-71
Abstract>TNCs compatible with GPS signals can be used to send packet reports of the precise location of vehicles automatically. This article reviews such units made by AEA, Kantronics, and PacComm.

Digest>The Global Positioning System (GPS) is the satellite system that is now available for private use that gives users their exact locations anywhere on the face of the earth, to an accuracy of 200-feet (60-m.), or better. Recently, the Automatic Packet Reporting System (APRS) has been developed by amateurs. It makes it possible for a vehicle, equipped with an amateur packet transmitter, a GPS receiver, and a TNC, to send automatically, by packet, frequent reports of its location. This review describes several TNCs that include the GPS function along with normal packet functions.

AEA PK-12

The first unit tested was the AEA PK-12 equipped with Version 7.1 firmware. It is a 1200-baud, full-featured packet TNC, including mailbox and node functions as well as KISS and HOST modes along with the capability of handling GPS data.

The unit comes with all necessary software, and also an excellent and comprehensive manual that contains a veritable packet tutorial. When used with GPS, it does not even need a computer; it will automatically transmit packets at preset intervals.

The manufacturer's list price is $129.

Kantronics KPC-3

Next reviewed was the Kantronics KPC-3 with Version 6.0 firmware. This unit was reviewed for general packet use in QST Dec 93. Its power requirements are so small that it can be powered by a standard 9-volt battery.

To initiate GPS operation, it is necessary to give it a command from a computer, but then it can be disconnected, placed in a vehicle, and operated with no further computer connection. The KPC-3 is a full-featured packet TNC and comes with all necessary software, including a copy of PacTerm, HostMaster, plus everything necessary to monitor WEFAX weather maps and G-TOR conversations.

Its suggested list price is $119.95.

PacComm TINY-2 MK-2

The TINY-2 MK-2 is not only a TNC, but it also includes a built-in GPS receiver. Like the Kantronics KPC-3, the TINY-2 MK-2 was reviewed in QST Dec 93, but at that time did not have the built-in receiver.

The current model includes a round magnet-backed patch antenna, 2-3/8-inches (60-mm.) in diameter, and also a plug-in power supply module for use on a.c. power. The one major drawback of this unit is the inadequate operating manual. The 1993 review strongly criticized that lack, and the present manual is even worse, since the GPS and APRS information is especially inadequate.

The manufacturer's list price is $629.

Title>PR2:QST Compares: Antenna-Modeling Software
Author>Straw, R. Dean - N6BV
Source>QST Oct 95, pp. 72-74
Abstract>Describes antenna analysis software based on the Numerical Electromagnetics Code (NEC) offered by Roy Lewallen - W7EL and Brian Beezley - K6STI.

Digest>A number of years ago, a U.S. Government agency developed a mainframe computer program, the Numerical Electromagnetics Code (NEC), that would calculate antenna performance. A few years later, a simplified version for personal computers was created, called Mininec. Now, with modern PCs equalling, or even surpassing, the power of former mainframes, the full NEC has been adapted to operation on machines using Microsoft DOS or Windows operating systems.

The original Mininec and NEC programs are awkward to use, so two amateurs: Roy Lewallen - W7EL, and Brian Beezley - K6STI, developed versions, first of Mininec and now of NEC, featuring clarified and simplified controls so that any ham can readily learn to use them.

W7EL called his Mininec version "Elnec", and it became popular with many hams. Now, he has issued his NEC version, that he calls "Eznec", using mostly the same commands and screen displays previously used in Elnec, but with expanded capabilities.

To calculate the performance of an antenna, one must "model" the antenna in the computer. This means the entering into the computer the measurements of each wire in three coordinates: x, y, and z. Once the wires are all specified, the locations of one or more feedpoints is entered; any "loads", such as loading coils, traps, or resistors, can be described; the type of ground specified; and the operating frequency selected. Then the computer will calculate essentially all operating variables and will plot radiation patterns in both azimuth and elevation. The azimuth pattern can be calculated at any elevation angle. Current flow at every point in the antenna can be listed, as well as input impedance and SWR at the feed point(s).

Mininec was, and continues to be, a highly useful program for many applications. However, it has some limitations that make it unusable for certain types of antennas. For example, it cannot be used to analyze open-wire transmission lines which are integral parts of certain kinds of antennas, such as log-periodic dipole arrays (LPDAs). Also, it has difficulties with sharp corners, such as those in cubical quads and rhombics. Furthermore, horizontal arrays within 0.2-wavelengths of ground cannot be analyzed properly. NEC overcomes most of these difficulties, is more accurate, and often is faster, as well.

Specifying the wire dimensions is a tedious chore and, once it is completed, it is almost a necessity to look at a diagram showing the antenna as specified. Often a user will find that a mistake of one number makes a wire to go off at an odd angle. The "View Antenna" command in Eznec provides an isometric view that includes all the wires, loads, and sources. It can also show a graphic representation of the current flow in each wire, as well as an overlay of the azimuth and/or elevation plots of output radiation.

Elnec and Eznec also provide a single command that causes the antenna to be analyzed at specified increments over a range of frequencies. The results of the calculations, as well as the antenna patterns, can be tabulated and saved to disk.

Eznec can be obtained directly from the author: Roy Lewallen - W7EL, P.O. Box 6658, Beaverton, OR 97007, for the pricd of $89.00 postpaid in the USA/Canada; add $3.00 for other destinations.

K6STI's NEC/Wires 2.0 essentially duplicates the analyses offered by Eznec, although without some of the niceties that Eznec provides. But, in turn, his programs offer some advantages over W7EL's. For one thing,

K6STI has developed a simpler way of specifying antenna dimensions, and he has made more use of assembler language sub-routines to speed up his programs.

Mr. Beezley also offers several other antenna programs. An interesting and unique one is AO 6.5, the Antenna Optimizer. This program uses the same type of antenna specification as NEC/Wires and automatically runs the calculations repeatedly, adjusting the parameters incrementally to find the optimum values. The user must specify which variables are to be optimized: (gain, F/B ratio, or SWR), and the frequency range over which it will be used. In addition, the parameters that are to be adjusted must be selected. For example, it can optimize the F/B ratio and SWR bandwidth by varying the lengths of the first director and driven element in a Yagi. The program will work for as long as necessary to identify the exact set of parameters for peak performance. However, AO is based on Mininec and, once its results are obtained, it may be wise to check them using NEC/Wires.

A somewhat similar program is YO 6.5 Yagi Optimizer, which optimizes Yagi antennas, only. Being dedicated to the one type antenna, it does a more thorough job of calculating all related variables than would be the case if AO were used on the same antenna, and also is much faster.

Another program that Mr. Beezley supplies is TA 1.0, a Terrain Analyzer. It is a ray-tracing program that analyzes the reflection and diffraction that will affect beams of radio energy from a specific antenna that has been modeled as with NEC/Wires, in a particular azimuth direction, over terrain that must be specified using data read from a USGS topographic map for the specific QTH. The resulting radiation pattern will be a more realistic indication of results than an antenna, only, study.

The price of any of K6STI's programs is $60 each, or $40 each for three or more on one order. Prices include postage in USA. Add $5.00 for international shipping. They are available from: Brian Beezley - K6STI, 3532 Linda Vista, San Marcos, CA 92069. Note that, in the past, all of K6STI's programs were copy protected; but he has now dropped that requirement.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel - N1FB
Associate Technical Editor

Title>TC1:More On Selective Calling Systems and Repeaters
Author>Newland, Paul - AD7I
Source>QST Oct 95, pp. 77-78
Abstract>Continues discussion of the utility of DTMF and CTCSS tones when transmitting through repeaters. Suggests that most repeaters could handle DTMF, if the Sysop desired it and/or users knew how to enable it.

Digest>In Technical Correspondence QST Jul 95, Gary Bell - KA1OMA discussed: "DTMF and CTCSS - How Well Do They Really Work?". This letter is a response. KA1OMA's letter observed that most repeaters do not repeat either DTMF or CTCSS tones at all, or not with sufficient fidelity that they can be used at the receiving end. In this letter, AD7I suggests that most repeater controllers could pass DTMF tones if the proprietor wanted it that way, and suggests that users should simply request that they do so. In other cases, repeater controllers are programmed to pass DTMF tones only if a DTMF character "D" is transmitted ahead the regular DTMF signals.

A different situation prevails regarding CTCSS tones. These are of such low frequency that most repeaters attenuate and/or distort them so badly in retransmission that they are not usable. Mr. Newland recommends that mobile transmitters be equipped with a six-dB. per octave rise in deviation over the audio range of 300- to 3000-Hz. With such an audio characteristic, users would find that they could operate through many repeaters without losing the CTCSS tones. He admits, however, that there are other factors affecting some repeaters that would still make it impossible for CTCSS signals to get through.

HINTS AND KINKS (HK)
Conductor: Bob Schetgen - KU7G
Asst. Technical Editor

Title>HK1:The Revisited WD0O Timer at K6TGA
Author>Tordoff, John - K6TGA
Source>QST Oct 95, p. 75
Abstract>Add a vocal message to the K6TGA timer for ID reminder usage.

Digest>WD0O described an electronic 10-minute timer for identification reminder in QST Feb 91, and an improvement in QST Jun 94. K6TGA has now made a further improvement by adding a "Chip Talker" as described by K5FOG in QST Dec 91 and QST Sep 92. Now, when the 10-minute interval expires, instead of a noisy buzzer, his wife's voice speaks, saying: "Johnny, it's time to ID". Hams at the other end of the QSO think that his wife is sitting beside him, reminding him of the time.

The modifications are described in a circuit diagram with parts list.

Title>HK2:Simple Timer Counts Up to 2-1/2 Hours
Author>Premena, S. - AJ0J
Source>QST Oct 95, p. 76
Abstract>Circuit diagram, parts list, and instructions for a simple electronic timer.

Digest>Described is an electronic timer using a single CMOS IC plus a half dozen passive components. It gives an electronic signal at the end of an adjustable timing period that can range up to as much as 2-1/2 hours. The CMOS chip draws only about 0.5-milliamps, so the power

supply can be nothing more than a 9-volt transistor battery.

A schematic diagram and full parts list is included.

Title>HK3:Reflective Tape for Easier Equipment Retrieval
Author>Kanitra, David R. - WB2AZE
Source>QST Oct 95, p. 76
Abstract>Make identification stickers of reflective tape for use in the dark.

Digest>Reflective tape, sold by auto parts stores, is excellent for identifying pieces of equipment that might be used in Field Day, or other activities that might last into hours of darkness.

Title>HK4:Checking the Performance of a Questionable Beam Antenna
Author>Leeson, Dave - W6QHS
Source>QST Oct 95, p. 76
Abstract>How to check a used beam antenna for corrosion problems.

Digest>This letter recommends a way to check the operating condition of a Yagi beam antenna using traps. First, with an ohmmeter, check the continuity across each trap and element joint. Next, set up the antenna only a few feet above ground. Use an SWR bridge or an antenna analyzer at the feedpoint and note the readings as someone runs their hands over the elements from the center to the ends. Erratic changes in indicated SWR are often good indications of corroded joints, or other problems.

Title>HK5:Installing Ground Rods in Heavy Clay
Author>Brown, Hugh - KC5EIY
Source>QST Oct 95, p. 76
Abstract>How to soften clay to ease the driving of ground rods.

Digest>For those locations where hard clay lies only a few inches (1-inch = 25.4-mm.) below the surface of the ground, KC5EIY suggests that one sink rods the "easy way". Use a posthole digger to dig only through the topsoil to the clay layer, then fill the hole with water and let it stand for an hour or two. The next few inches of clay will have softened and can be removed with relative ease. Then put 4- to 6-inches (100-150 mm.) more water in the hole and let the time and water do half the work. Repeat as necessary to go down about 5-feet (1.5-m.). At that point, drive the last 2-feet (0.6-m.), or so, with a hammer, then refill the hole with clay about 1-inch (25-mm.) at a time, tamping it down before adding more. This procedure increases conductivity between the rod and true ground.

Title>HK6: "Super" Glue Cures Transformer Buzz
Author>Hitt, John - N5JH
Source>QST Oct 95, p. 76
Abstract>Quieting slapping laminations.

Digest>Transformer noise caused by slapping laminations can often be eliminated by the use of a few drops of cyanoacrylate adhesive ("Super Glue") dropped on the edge of the laminations. If the viscosity of the adhesive is low enough, it will penetrate into the open spaces between laminations and freeze them into place when it hardens. Be sure to use low viscosity glue.

FEEDBACK (FB)

Title>FB1:"Transmission Line Characteristic Impedance and Losses", Technical Correspondence, QST Aug 95
Author>Straw, Dean - N6BV
Source>QST Oct 95, p. 78
Abstract>Correction of mistake in a formula and title of table.

Digest>Equation 1 should have been:
$X(0) = (-a/b) * R(0)$

The caption for Table 1 should have been: Comparison of Transmission-Line Characteristics with Different Velocity Factors.

Title>FB2:"Bring 'Em Back Alive!", QST Aug 95
Author>Hare, Ed - KA1CV
Source>QST Oct 95, p. 78
Abstract>Suggestions about methods of rehabilitation of old radio gear.

Digest>Mr. Hare, ARRL Lab Supervisor, provides several recommendations and comments about the subject article which discusses rehabilitation of antique radio equipment. Figure 3 in the article showed a mis-wiring of transformer T1. Correct wiring is illustrated in a schematic diagram. The diagram also shows the addition of a 0.5-amp fuse and an On-Off switch.

The original article showed a meter to measure power supply current; it was identified as a microammeter. It should be a milliammeter with a range of at least 50-milliamps.

The article and Figure 2 showed the addition of a 3-wire power cord, but some older equipment uses AC/DC circuits that leaves the chassis "hot" with 120-volt a.c. Never modify such a circuit!

Also shown is the use of two 0.01-mfd. bypass capacitors in the transformer primary circuit. For such service, use only a.c.-rated capacitors, such as the XY Series, or type GL capacitors.

NEW HAM COMPANION (NHC)

Title>NHC1:The Way We Were: Amateur Radio in the '50s
Author>Thomas, Ronald R. - W8QYR
Source>QST Oct 95, pp. 56-58

Abstract>Ham radio 40-years ago.

Digest>In this article, W8QYR tells what amateur radio was like 40-years ago. For many new hams, this was their grandparents' day. He describes the Novice license of that day, which was good for only one year and allowed only CW activity using crystal-controlled transmitters, with maximum power input of 75-watts, in very narrow segments of certain bands. Within the one year, it was necessary to develop a code speed of at least 13-wpm in order to upgrade to General Class. Hams who were not successful lost their licenses.

All equipment used vacuum tubes, and much of it was home built. During the decade, amplitude modulation (AM) was gradually losing popularity in favor of single sideband (SSB). Amateur stations almost universally used separate receivers and transmitters; transceivers became available and popular only in later decades.

Title>NHC2:VHF/UHF Mobile in a Late-Model Corvette
Author>Seybold, John S. - KE4PRC
Source>QST Oct 95, pp. 59-60
Abstract>How the author mounted a mobile rig in a Corvette without drilling holes.

Digest>KE4PRC drives a 1994 Corvette and installed his mobile ham rig without drilling any holes, at all. For an antenna, he used a Comet clip-on window mount, Model WS-1, with suction cups. He attached it to the passenger window and ran the coax feedline underneath the armrest compartment door. He notes that he must never forgetfully roll the window all the way down with the antenna clipped on the glass!

The rig that he installed is a Kenwood TM-733A which has a detachable faceplate. He mounted the cabinet on the rear deck, with the faceplate alongside the steering column. Control wires were routed underneath the carpet and along the bottom of the door jam. Power leads make direct connection with the battery in the engine compartment, then pass through the accordian boot between the hinges of the door on the driver's side.

Once the installation was completed, the author found that he was suffering from RFI that emanated from the Central Control Module (CCM), which is in an ungrounded metal enclosure. He had the enclosure grounded by the dealer's shop, then reduced the remaining noise to a tolerable level by bypassing the power leads to ground using 0.01-mfd. capacitors.

Title>NHC3:The Doctor is IN
Author>Various
Source>QST Oct 95, pp. 61-62
Abstract>Questions and answers of special interest to new hams.

Digest>In this issue, the questions discussed include: difficulties a newcomer finds in entering conversations on repeaters; which bands are

good for short, medium, and long-range communications; cascading down-converters to convert 2.4-GHz. first to 2-meters, then to 10-meters; trouble shooting circuits on a PC board; the ACRS communication system used by airliners; a suitable power generator to operate a Kenwood TS-450S transceiver in the field; hidden HF antennas; limitations to the subject material allowed to be discussed in international conversations in amateur radio; and other subjects.

Title>NHC4:Build Your Own 2-Meter Beam!
Author>Botkin, Dale L. - N0XAS
Source>QST Oct 95, pp. 63-64
Abstract>Making a simple and inexpensive 2-meter beam antenna.

Digest> In order to access a distant repeater with his H-T, N0XAS built a simple and inexpensive 2-element quad antenna that gives substantial gain in the desired direction.

Using No. 12 copper wire, he formed two squares; 21-3/8 inches (0.543-m.) on each side, for the reflector, and 20-5/8 inches (0.524-m.), for the driven element. The wire ends were positioned in the middle of one side, soldered together for the reflector, but left open for the driven element. The coax feedline was attached by soldering the shield braid to one of the open ends, and the center conductor to the other end.

He then made a wooden frame to support the two elements configured with two sides of each element parallel with the ground and the feedpoint of the driven element in one of the vertical legs. The elements are supported on a boom, initially 9-inches (229-mm.) apart. The coax lead runs from the center of the one wire to the end of the boom supporting that element, along the boom to its center where the mast is attached, then down the mast to the transmitter.

If an SWR meter is available, the spacing between the elements can be adjusted to set the SWR ratio to a minimum value. It should be possible to reduce it nearly to 1:1.

If the antenna is to be used outdoors, the wooden members should be protected with preservative or several coats of varnish. The antenna boom should be aimed in the desired direction, with the driven element in front and the reflector behind.

Title>NHC5:A Townhouse Dipole
Author>Gress, Mark L. - N0OQC
Source>QST Oct 95, p. 65
Abstract>Suspend a dipole in the attic for a true "Stealth" antenna.

Digest>N0OQC lives in a townhouse where it is undesirable to erect an outdoor antenna. He found that the simplest solution to his desire for an effective HF antenna was to mount a triband dipole in his attic. He suspended a Cushcraft Model D3 10-, 15-, and 20-meter dipole from the

rafters using nylon webbing as the support. The coax feedline was fed down between the studs, following the house wiring.

He reports excellent results and obtains good signal reports from all points of the compass.

Title>NHC6:Outer Space and Cyber Space:Following Mir-18 from the Dominican Republic
Author>Meara, Bill - N2CQR/HI8
Source>QST Oct 95, pp. 66-67
Abstract>Working the ham station in the Russian space lab Mir.

Digest>Mr. Meara works with the U.S. State Department and is stationed at the U.S. Embassy in Santo Domingo, Dominican Republic. From that QTH he operates N2CQR/HI8. In March, 1995, he contacted R0MIR, then operated by Dr. Norman Thagard, an American who was a guest aboard the Russian Mir Space Station, during several of its passes overhead. He describes several QSOs.

After Dr. Thagard had spent some three months aboard the space station, the American shuttle Atlantis docked with Mir, then brought him home.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:The 1995 Special Olympics World Games
Author>Battles, Brian - WS1O
Source>QST Oct 95, pp. 24-26
Abstract>Amateur activities during the Special Olympics.

Digest>The Special Olympics World Games were organized to allow mentally retarded athletes from around the world to participate. The 1995 games took place in early July in New Haven, CT, centered on Yale University. Some 7000 athletes from 140 countries competed and about 750,000 spectators attended. The event was organized and managed by some 50,000 volunteers.

More than 500 amateur radio operators participated, setting up a special-event station and booths to send free radio messages from anyone who stopped by. This article relates a number of anecdotes and descriptions of amateur radio activities conducted during the games.

Title>GI2:20 Years of ARRL DX Contesting From the Foot of the Swiss Alps
Author>Lava, Fabio - HB9AUS
Source>QST Oct 95, pp. 27-29
Abstract>Operating the ARRL DX Contest from the top of a Swiss mountain.

Digest>The ARRL International DX Contest has been held each year for more than 60 years (excepting the years of WW2). It consists, essentially, of everyone else in the world working the USA and Canada.

Mr. Lava first took part in the 1960's as part of a team operating as HB9QD. They erected antennas on or near the top of a 1700-meter-high (5500-ft.) mountain and operated for two successive weekends in sometimes severe winter weather.

For the last 20-years, he and several mates from the earlier HB9QD team have participated using his call, HB9AUS. He recounts some of the heavy snowstorms that sometimes tore down their antennas, and other adventures. The biggest change that has affected their contest operation is the adoption of more and more powerful computers for logging.

Title>GI3:Propagation Pioneers: The ARRL - Bureau of Standards Experiment
Author>Welsch, Robert H. - N3RW
Source>QST Oct 95, pp. 46-49
Abstract>Describes a pioneering radio propagation study jointly conducted by ARRL and the Bureau of Standards in 1920.

Digest>In 1920, six years had passed since the radio spectrum was divided up and radio amateurs were required to confine their activities to the relatively "worthless" wavelengths shorter than 200-meters. Commercial radio had spanned the globe using low to very low frequencies. The longest-range stations operated even as low as 20-KHz., where the wavelength is of the order of 10-miles (16-km.)! Using enormous antennas and extremely high power, they maintained successful communications over very long distances.

In the meantime, amateurs had found that short waves, at times, provided long-range propagation with very modest station equipment and antennas. But the results were erratic, and contacts were subject to fading during which received signal strengths ranged from very good to inaudible over periods of seconds or minutes. Scientists had no clear idea of why these effects occurred, but they had begun to realize that the short waves were not as worthless as had earlier been thought.

The US Navy, in particular, had great interest in radio communication between ships. On April 7 of that year, ARRL President Hiram Percy Maxim - 1AW met with a group of prominent scientists and they decided that the US Bureau of Standards and the ARRL would cooperate in a carefully-controlled test specifically to study the phenomenon of fading. The ARRL offered to recruit a number of active amateur stations to seek their voluntary participation in cooperation with the ARRL station 1AW, in Hartford, CT and the naval radio station NSF at Anacostia, Maryland. Note that no contracts, no federal government grants, and no lawyers were involved!

In the next few weeks, five amateurs offered their cooperation and their transmitting stations. All the stations, except the Navy and 8XK in Pittsburgh, used 60-Hz. rotary spark gap transmitters. Those two were equipped with new vacuum-tube continuous-wave (CW) transmitters.

In addition to the transmitting stations, nearly 40 other amateurs volunteered to listen and keep records of received signal strengths. All the recorders, except one, were equipped with 3-tube regenerative receivers. Geographically they were scattered over most of the northeast quarter of North America, from Quebec to Tennessee, and from Maine to Iowa.

Test transmissions were made on 250-meters (1.2-MHz.) during evening hours, for six weeks from June 1 to July 17, 1920. Each transmission consisted of the alphabet transmitted 5 times at 18 words per minute. The recorders listed the approximate signal strength of each letter as it was heard.

The tests turned out to be among the most important early radio experiments ever performed. They clearly proved that fading is not connected with weather conditions! The hypothesis that short radio waves were being reflected and/or refracted by some process not then understood was strengthened. Finally, it was clearly shown that short-range propagation does not show fading effects, whereas longer range propagation during the same time periods, does. Thus the difference between ground waves and sky waves was evident.

Title>GI4:Heroes Under Siege
Author>Durakovic, Samir - T94ON
Source>QST Oct 95, pp. 50-52
Abstract>Describing the horrors of Sarajevo under siege, and ham activities there.

Digest>This article was written by a Bosnian radio amateur in Sarajevo. He wrote it in the Serbo-Croatian language in early 1995, while Sarajevo was cut off from the rest of the world except by ham radio. Several months passed before he was able to find a way to get his letter taken through the Serbian siege lines so that it could go to his friend, Sharon Gartenberg - KC1YR. She, in time, received it and, with the help of Janko Gravner, translated it into English.

In it, the writer describes the terrible conditions in Sarajevo, the capital of Bosnia-Herzegovina, which had a population of 600,000 before the war began. More than 10,000 people have been killed in the city, including 1600 children, and a great many more have been wounded.

Early on, the Serbs severed all telephone connections, and for many months the only contact with the outside world was via ham radio. Before long, they learned to seek out and fire at anything that looked like a radio antenna. During the siege, a number of the author's ham friends were among those killed or injured.

The active hams soon became known throughout the city and have been treated as heroes ever since. The author remembers, as the saddest pileup of his life, handling the radio traffic that resulted, in February, 1994, from the single Serb shell that killed 70 people, and wounded 200, in a crowded Sarajevo market. That night, he and a friend

worked on two different 80-meter frequencies throughout the night.

Conditions now are somewhat easier. Somehow, telephone lines have been put through to unoccupied areas in the country, and even a few to the outside world. Ham radio messages are still being sent, but not with the urgency and under the pressure of before.

2816. Re: Cable TV frequencies (A LIST)

If Burt's intentions were to improve anything, if his intentions were to
have a civil discussion, you may have a point.

I have turned off the idiot's ravings through the filter, but his arrogant,
confronting drivil is still there in followup posts, hence, the "changing the
channel" analogy does not apply.

Furthermore, his little attempt to gain higher fame is particularly crude.
To crosspost to multiple newsgroups of varied intrests to simply throw
his poison is a disgrace to the ham community (since he identifies himself
as a member).

Burt is nothing more, nothing less than a self-serving troublemaker.

Hmmmmm.......Sounds like another misconception here. I think Drew was just being cynical about the perception of those that know the code are "better behaved" and "higher up" on the ham evolution scale. If Drew was really equating knowledge of Morse code with intelligence, then why would he say this after only passing a 5 WPM test himself?!

Mike, it sounds like you are the one with the problem. Insulting people by saying that General class and lower are not "Real Hams" does not show me that an Extra class liscense holder is superior. Even a Novice operator can experience the thrill of real DX and they don't even own a microphone! They may even get a WAS certificate before an Extra class, so why are they not "Real Hams"?

I have an answer: The Deputy Chief of the Wireless Telecommunications Bureau of the FCC participates in the NYC Marathon communications, and he gives us a special waiver on the 10 minute ID to facilitate race communications -- It gets pretty busy on some of the nets when the race is on!

I hope this answers the questions...

The one you want is QLF - short for "Send with your LEFT foot!" or the interrogatory "Are you sending with your left foot??" There is no Navy Z-code cross reference for it in any currently published NavTelComm manual.

George,
try XMLOG, it is in most hamradio/logger ftp sites. It has the CDROM interface
and basic awards tracking. I use it for my mobile contact logging and it is ok.
No auto fill-in like logEQF, but it will do auto time-stamp and a few other
conveniences.

Don't get me wrong, I do believe there should be effort involved
in getting a liscense. Maybe 5wpm CW, and much more stringent and
educational written tests. The current written tests don't really
teach you much. CW is a dead language, just ask the Navy.

<that General class and lower are not "Real Hams" does not
show me that an Extra class liscense holder is superior.>

Actually I said real hams have a General Class ticket or higher. The issue isn't superiority. The issue is committment.

The No-Coder ticket is Ham Radio's affirmative action plan. Reduce test criteria and dumb down the exams so that we can expand the total numbers of the hobby.

The League (if you recall) sold this idea with much hype. We were told of this large group of technically literate persons who would flood the hobby, enrich and diversify it. If only they didn't have to learn the code. Just give em a chance.

Of course they flooded the hobby, all right. Give anything away and all kinds of animals will show up. All No-Coders claim they're gonna upgrade or working on it. But they have not upgraded! The W5YI statistical analysis shows that fewer than 20% of those who came into the hobby as No-Coders upgraded to Gen. or above. They remain on the bottom of the heap. Rendered harmless on VHF, but bringing nothing to the party. Wanna-be's and Never were's.

I've kept quiet on this long enough. After 35 years of being a General, (or was it longer?) I was talked into upgrading since I copy CW 35-40 WPM. I studied electronics and school and knew most of the theory at one time. I tooked the advanced without cracking a book. Big mistake! You can imagine how much things have changed over the years!

Anyway I studied for the Advanced on month and passed. Then I hit the books for the Extra the next month and passed. My conclusion is that they are both hard! The Advanced requires more math but the Extra requires knowledge.

In conclusion, I'd say that anyone who has the discipline to study for any test and passes has earned their reward! The level of difficulty isn't a factor.

Hi Marc. The Livermore RACES (Radio Amateur Civil Emergency Service), a group of volunteers who provide emergency communications at the direction of a local government (city, county or state office of emergency services; police or fire department) I believe operates on the 147.120 MHz repeater. You could listen to this repeater using a "scanner" type radio. Other frequencies in your area that might have related information during a disaster situation include 145.33 (Mt Diablo). In the South Bay, 146.115 and 145.27 (South Penninsula) or 145.45 Mhz repeaters (on the ridge above Saratoga) all carry RACES communications during emergencies.

With a scanner, you might also be able to listen to local police and fire department communications (in some areas, they have moved to 800 Mhz systems that may be more difficult to monitor). Scanners are primarily for local communications; shortwave radio is usually for distant communications.

A shortwave receiver would be used to listen to communications that are occuring a long ways away. For example, if an earthquake occurred again in Mexico City, you can listen in on shortwave communications from that disaster area. You can find an example audio file of actual amateur radio emergency communications at our free web site, Ham Radio Online virtual magazine, at http://www.accessone.com/~vbook/hronline.htm

Good luck and have fun (and stay out of earthquakes!)

The FCC would disagree with you on this one. So would the majority of
amateurs...in fact, the majority of today's amateurs hold a class of
license BELOW General.

>
>The No-Coder ticket is Ham Radio's affirmative action plan. Reduce
>test criteria and dumb down the exams so that we can expand the

Nope. It was a case of ham radio finally looking ahead to the future
instead of behind to the past (for once) and realizing that the Morse
requirement was:

1) outdated, obsolete, outlived it's usefullness and
2) a barrier to would-be new hams whose numbers were neccessary to keep
commercial interests from taking more and more amateur frequencies for
their uses (is it any coincidence that the No-Code Tech license was
approved shortly after amateurs lost 220-222Mhz? I think not! This
served as a "wake-up call" and allowed those in favor of the No-Code
license to make their voices heard over YE OLDE FAHRTZ who wanted to keep
their private club intact)

So how do you explain someone like myself, Mike? I am 31 years old and have been involved with radio since I built my first pirate AM broadcast transmitter at age 8 (from scratch, BTW, not a Radio Shack kit.) I have also been a commercial broadcaster for the past 12 years, having been involved in all facets of the industry...including the engineering department. I could walk in today and pass the Extra Class theory exam with ease...I know the material because I've been learned it and been exposed to it on a day-to-day basis for many years. It's my life, my career. Yet I have no interest in Morse code and did not pursue amateur radio for many years precisely because of the code requirements. Not that I couldn't do it...when I decided to go for my ticket, I took the 5WPM just for the heck of it, to give it a try and see if I liked it. It took me less than a week of listening to the tapes to get well beyond the required 5WPM. But I have no interest in it, and from where I stand, it's not relavant to amateur radio in 1995. I'm much more interested in today's communications...voice, digipeters, packet, etc. Given my background, I fail to see how I am any "less" a legitimate amateur radio operator simply because I have not proven my ability to pound a brass key at 13WPM.

How 'bout it, Mike? Am I a "wanna-be" or a "never were?"

Although I change frequencies when I come across hams using profane, obscene language I wonder where, and how, the "self-policing" hams are supposed to do comes into play? Do we break into the conversation, reminding the errant hams about Part 97, or just leave them alone? As for illegal activities conducted on the ham bands, activities which I've heard are rampant especially out west, it would prove dangerous or fatal to DF and get physically anywhere near such criminals, but that's another story. I, for one, would dearly love to hear a return to civility and clean language, and want to do what I can to help bring this about, besides setting a good example, that is... Any thoughts on this? --Bill KB8USZ

SB SPCL @ ARL $ARLX070
ARLX070 ETO agrees to merger

ZCZC AX40
QST de W1AW
Special Bulletin 70 ARLX070
From ARRL Headquarters
Newington CT November 28, 1995
To all radio amateurs

SB SPCL ARL ARLX070
ARLX070 ETO agrees to merger

A merger between Ehrhorn Technological Operations (ETO), Inc, and Applied Science and Technology, Inc, will not affect ETO's position in the Amateur Radio market, according to ETO Chairman Dick Ehrhorn, W4ETO.

Applied Science and Technology (ASTeX), of Woburn, Massachusetts, makes systems for making industrial diamonds and semiconductor materials. ETO makes high power RF products, including ALPHA linear amplifiers for amateurs.

Ehrhorn said ''ETO's people, technologies and products strongly complement those of ASTeX. Our combined capabilities extend from dc to microwave and up to 75 kW.

''Delivery commitments and warranty service for ETO-ALPHA Amateur Radio products are not affected,'' Ehrhorn said. ''ETO continues to operate from its Colorado Springs location with no anticipated changes in personnel. Ray Heaton remains the primary sales and service contact for Amateur Radio customers.

''In fact,'' Ehrhorn said, ''We're looking for ways to serve our Amateur Radio customers even better.''

In 1995, ASTeX had fiscal sales of about 20 million dollars, according to an ETO press release. ETO reported its sales for the nine months ended September 30, 1995, at more than 10 million dollars.

I usually go to Pasadena or Burbank. It's a much shorter
drive from Northeast Los Angeles (unless you know a REALLY GOOD
short cut). ;-)

Actualy that is not a merger but a buy out acording to informed sources within ETO. As I understand, Dick wants to go in to retirement. A call to Astex revealed that this company is not very interested in the hamradio side of ETO and want's to mainly serve the solidstate industrie. As my source (he ask not to reveal his name) told me, the final desicion regarding the ham radio line will be made in January of 1995 at a Board meeting.

-- [From: Danny Ozbirn * EMC.Ver #2.3] --

A lot of you out there think because you pass some test you're better than any one else but all of you have forgot what a ham license is. It's just a license to let you learn more about the wonderful world of radio. If you have a ham license and haven't built anything or even designed anything what makes you think because you passed a simple test that you are so much better in the world of technology than anyone else. If you have a novice and don't try to upgrade then you're just lazy, and if you have an extra and are not elmering young people or designing new technology then you're lazy, too. Each day is a new day in the technical world and technology turns over now about every five years. All of you people wanting 1920 technology like CW to hang around forever then make it fun, and make sure you take time to teach it to the new hams or let it die like the old five tube AM radios of yesteryear. All of you wanting hf priviledges just simply learn the code. All of you worring about learning the code, take time and learn it. YOU CAN DO IT if you don't believe in can't. All of you that think because you've passed some test and aren't learning something new about technology everyday then you like CW and AM radios are destined to become old and obsolete like the dinosaurs of old, If all of you complaining about learning the code would get all the people complaining about you complaining then CW wouldn't be a filter to keep someone out of the hobby it would be something fun and interesting to learn.

All you people wanting to keep the code keep it uselful and make learning CW fun it will probably be around forever, but if you sit around and complain about somebody not sending or receiving as fast as you then CW is destined to be replaced by modern and more ecfficient technologies.

I think you should reconsider. Most of my friends who are hams have Tech Plus tickets, some have No-Code Tech tickets, and a couple have Advanced tickets. The only difference I've noticed is how much they know about all aspects of ham radio. None of my friends who hold Tech Plus tickets and lower are any less competent than my friends who are General class operators and higher.

Stereotyping is so ugly.

>The Indian Valley Public Library is located on Church Road (Pa Rte 113)
>in Telford, Pa next to Landis Supermarket.

Church Road a.k.a. Church Ave. is NOT PA 113. It is the extension of
(ends at jct with PA 309) PA 152. If you follow PA 152 north, it ends at
PA 309 and the library is a mile or two further along the way.

Those of you who are using a map to locate things may need to know that
the Indian Valley Public Library is in the old Telford Elementary School,
near the intersection of Church and Main (a.k.a. county line road) in
Telford.

And a big thanks to Dick for posting this. Ya'all come take your exam,
now, heah!

What percentage upgrade to tech+ ?
20% general upgrades are pretty good considering the amount of time/effort
needed to reach 13wpm. Todays busy world makes it difficult for
people to commit that much time to just a hobby.

How does the quality of HAMS on VHF compare to say 80 meters?

Everywhere in the country I've been VHF is full of well behaved
polite respectable people. You can't say that about 80 meters.

So no-code did not reduce VHF to CB standards as you old-timers
were ringer your hands worrying about. With stringent
written tests and no-code HF lisense, I'm sure the quality
of VHF will be mirrored in no-code HF HAMS.

Hmmmm by the time No-Code Hf becomes a reality, the Internet and other
forms of communication (like Motorola's Project Iridium) will probably
have made a lot of Ham radio irrelevant anyway. So then you will have
lots of bandwidth to spread your venom about waiting for all those
YEARS to get on HF.

I hope you really enjoy the WAIT :)

It has been very interesting to me to see the various extreme opinions concerning amateur radio, expressed in this forum.

I am currently studying for the theory and code exams, after letting my license lapse in the late 60s. I expected that there would be some significant differences in the ham bands now vs then, but I'm not sure I was prepared for how significant those differences would be.

Wow! I'm really impressed! Are there new Q-signals for "moron", "assh*le", "fu**-off-and-die", and all of the new expressions I'm learning from these newsgroups, or is some sort of fringe thing?

For the record, I like the CW requirement, even though I've always had difficulty in making an adequate speed. The theory part is giving me fits, though, since my first exam was all tube stuff, and I've been doing mostly software since then. But, it's good for me. It's great fun to see what the circuits looks like now...

I'm looking for an elmer regarding the theory part and am quite willing to elmer in return regarding the software part. So much has changed since the time that I was on-the-air, is there even such a thing as an "elmer" anymore? Geeez this is so confusing...

Does one notify the Canadian radio authorities? Does
one get a temp V? call? Does one use his/her USA call?

You don't have to notify Canadian radio authorities. You don't get a temporary VE call. You just use your US call, followed by "mobile" or "portable" (or a slash if using CW) and the Canadian prefix corresponding to the province or territory where you happen to be at the time.

Technically, you can do this only if your are a US citizen =and= a US resident. However, when I immigrated to Canada from the US in late 1992, the Canadian radio authorities told me it was OK for me to use my US ham license until I got a Canadian license (even though I was no longer a US resident) -- so for the first few months I was here, I signed as WA6SGA/VE3.

We plan to tour western Canada and Alaska next summer
with 2m FM in car. I hadn't planned to use it in Canada,
but maybe I can do so without any hassle??

No problem. Just make sure you bring your US ham license with you (a photocopy will suffice, I believe). The relevant Canadian call sign prefixes for your trip, BTW, would be VE7 for British Columbia, VE6 for Alberta, and VY1 for the Yukon Territory.

2886. HAM-server Information

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-28 00:00:00 UTC
From: server@GRAFex.sbay.org
Message-ID: <gate.9B9aFD1w165w@GRAFex.sbay.org>
Source record: 234836
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

From: server@GRAFex.sbay.org
Date: Tue, 28 Nov 95 23:15:19 PST
Message-ID: <gate.9B9aFD1w165w@GRAFex.sbay.org>
Subject: HAM-server Information

Distribution: world
Subject: HAM-server information

HAM-server was devised to allow people without direct internet access a way
to get amateur radio related programs and other information. It is not
directly on the internet, so ftp and telnet is not available.

Most of the files on HAM-server are available via ftp from the various sites
around the world that archive them. That's where I got most of them.

In addition to DOS files, there are some Mac ,Linux, and OS/2 files available.
I'm always on the look out for more (particularly Mac, Linux, OS/2).
See below.

General Information:
====================

There is a daily limit of ALL requests of 3-megs. There is an individual
limit of 1.2-megs. If there are a series of files you want to order,
stretch them out over a few days, rather than ordering all at once.
That way, you are almost assured of getting them all, and you won't be
blocking others from getting their orders filled.

ASCII (text) files are split at about 59,000 bytes. UUENCODED binary files
are split at about 750 lines.

A new INDEX is automatically generated every Sunday.

Ordering Information:
=====================

Send an email to:

HAM-server@GRAFex.sbay.org

In the text of the message, place:

HELP
GET /hamradio/INDEX.TXT
QUIT

HELP will send you the HAM-server HELP file. This is processed immediately
for return delivery.

o DOS

If you are using a PC and you do not have UUDECODE, order UUDECODE.BAS or UUDECODE.C and UUEXE536.ZIP. Compile on your system then uudecode UUEXE536.ZIP. This is a archive of UUENCODE and UUDECODE, with documentation. This will work for DOS and OS/2.

o OS/2

I highly reccomend UNZ512X2.EXE. This is InfoZip's ZIP and UNZIP (plus other stuff). Will dearchive PKUNZIPped files, as well as UNIX zipped files.

o Macintosh

Most Mac programs are stored in binhex (.HQX). You will need a utility, such as StuffIt to decode. There are also UUDECODErs and other de-archivers available. See the index for /hamradio/macstuff/utility.

o Linux

Use UNZIP.

Some Reasons Why Ordered Files Are Not Received:
==========

o If you are ordering from a ccmail system, be advised that ccmail in its default configuration attempts to automatically UUDECODE files. If your order is sent in parts, it will hiccup after the first part. See your system administrator.

o Your return path is incorrect. My bounce mailbox fills up quite regularly with messages. And, since the path is incorrect, I cannot contact you to let you know. Try the PING command to check that the path is open.

o You have spelled the file name incorrectly. Check the INDEX.

o You have entered your request incorrectly. Check the HELP file for correct syntax.

o The file name has changed since the INDEX was generated. Order a new INDEX. See the HELP file for the NEWFILES command.

o You sent your order to me personally or in reply to this post. Orders are only honored when sent to HAM-server@grafex.sbay.org. That's the way the software works.

YOUR HELP IS NEEDED:
==========

If you have a program you would like placed on HAM-server, you can email it uuencoded (DOS, Linux, and OS/2) or binhexed (Mac) to

incoming@grafex.sbay.org

This email address is set up to flag me that there is something new that I need to take care of quickly.

>: Upgrade to the real thing or get out of the hobby. We don't need
>: anymore pseudo-hams.

Certainly it is in poor taste to make such a comment and is not very supportive of our 'newcomers' to the hobby. All of us were necomers at one time or other and we sought advice and assistance from our elmers or others with some experience. Whether we were then Novice licensees or otherwise really made little difference because we still needed to learn the ropes. One of our roles as more experienced amateurs should be to help the newcomers become part of our fraternity.

I am however, equally concerned about the 'apparent' lack of knowledge displayed by many of the newcomers. Many that I talk to seem to be unable to make or install a simple dipole antenna or make a transmatch function, among other things. This disturbs me and I have to wonder if perhaps we are making it too easy to get a ticket?
Whether they go on to bigger things or master the code is of little concern to me..but I am concerned about them not knowing basic fundamentals.

From 2 to 10 December, Meg (N2NQI), Dave (WG3I), Walt (G3NYY) and
Tim (G4VXE) will once again be portable /C6A from New Providence Island
(NA-001) in the Bahamas, with activity on all bands - mainly on CW and
some RTTY.

In response to requests, we intend to concentrate on the WARC bands
this year as many people have said they still need C6A on these bands.
However there will be plenty of activity on other bands too!

QSL for WG3I/C6A via G3AUA, via home calls for the others (direct or
via bureau).

Further details can be found on the Squarebashers' Expedition Group
WWW page, http://ourworld.compuserve.com/homepages/timkirby

>
>- - - Have you performed some magic this week?

Statistics can be manipulated in any form a person chooses and should
not be taken seriously. Here is an example:

Before cellular phones were introduced there were approximately
6 cases of brain cancer per 100,000 people.

Since cellular phones have been introduced, there have been about
a dozen lawsuits claiming that the cellular phones caused the plaintif
brain cancer.

There are about 20 million cellular phones in use throuought the country
so take 20 million and divide that by 12 cases of brain cancer the phones
are alledged to have caused, and you get 1,666,666

1 in 1.6 million users of cellular phones claim they got cancer from
the phones.

That is 16 times less than the cases of brain cancer before cellular phones
were introduced.

Statistical conclusion: Cellular phones lower the risk of brain cancer!

SO MUCH FOR STATISTICS!!!!

>of the FCC participates in the NYC Marathon communications, and he gives us
>a special waiver on the 10 minute ID to facilitate race communications -- It
>gets pretty busy on some of the nets when the race is on!

>I hope this answers the questions...

Well, I thought it answered all the questions...

I received additional clarification from Steve Mendelsohn, WA2DHF,
Communications Director of the NYC Marathon:

I re-read Part 97 and discovered that the ID rules have, indeed, changed
since last I looked.

What we had been doing was to tell people to id -- on low power on the
repeater output -- based on the fact that the rules, pre-1994 had no
language about where one had to ID, they only said you had to ID. So ......

I specifically spoke with Ralph Haller, Deputy Chief of the Wireless Telecom
Bureau, and he looked and said that the rules had been changed to require
all ID on the transmit channel.

Therefore - starting in 1996 the Marathon NCS on all nets will tell all
stations to ID simultaneously every 10 minutes.

Thanks to everyone who provided input -- You made a difference.

>something after all. Or maybe they figured that if you were dumb
>enough to carry that heavy pig of a radio they could saddle you with
>a heavy rifle too. Take your pick.

I had an Air Force room mate at Kingsley Field who came back from a one
year all expense tour to Asia. He was a "switchboard operator." Yea, they
plugged and routed calls. When he got to Saigon they assigned him to an
Army unit as a radioman. I asked him what kind of training he got, and he
just looked at me funny. I guess you just squeeze the pickle and talk :-)

I have a good friend who joined the Navy so he wouldn't get drafted into
the Army. He figured he'd get a big ship and spend his 4 years at sea. You
guessed it, he was assigned to the Mekong Delta as a UH-1 door gunner.
He was lucky. He lasted 6 months before getting hit in the butt. It was a
lot of hospitals and therapy, but he did get back the use of his legs.

But it is ironic how you plan real hard to avoid something, only to get
that something anyway, but even worse!

Not that this has anything to do with CW...

Hello All,
I will be operating portable this weekend from IOTA NA-110
Hunting Island, SC, USA. Hunting Island is a Semi-Tropical Island off
the coast of Beaufort, SC. It is one of my favorite camping locations.
I will begin operating from there around 2000UTC Friday and
continue until Monday Morning. If you collect IOTAs or just want to
say "Hello" give me a shout. I'll be on the usual IOTA Frequencies
(+- 14260KHz).

Hello y'all...

I apologize in advance becuase this is off topic, but I figured that
thisnewsgroup is where I would have the best luck.

LSG(Fu)b is an amplifier for the German UKWe radio
from WW2.

Would anyone out there happen to have some cind of
schematic for this unit? I would be willing to
reimburse photocopy/mailing expenses.

Sincerely,
Paal R.

The reason this frequency sounded like CB is because the operators
you heard were CBers. They are CBers who just happen to have an
amateur license, but they are not hams. Hams don't act that way.

I heard Ben Bass (bbass@buffnet.net) say:

: I'm an example of EXACTLY who was supposed to be attracted by the
: codeless license. I've been a broadcast engineer for 20+ years and I work
...
: upgrade and never claimed to be working working on an upgrade. I too
: could likely pass the Extra written exam without any trouble.

And I'm another, but different still. I got my FCC 1st when I was 19,
and have worked in various capacities in the communications industry
for 20+ years, installing, operating or maintaining voice and data
systems working anywhere from MW through S-band; these days I write and
maintain software running on state of the art integrated switching systems.

I drifted around the periphery of hamdom for years because I wanted to
do HF and somehow just never found time for the code. The availability
of Tech+ was incentive enough to get off my butt and do it, since even
without the code, there's a world of activity available, and with that
little bit of code, HF opens up just enough to provide even more motivation,
for me, to continue.

So this last weekend, I took and passed all the written Elements and
5wpm code. For me, right now, the _only_ thing between me and Extra
is 20 wpm, and I've got a year to make good on it. I'll do it, too.

Besides, I'm starting to like CW. Sure, it's hard, for me anyway, and
the code itself is only the beginning, since real CW operation is
conducted with Q-signals, prosigns and abbreviations enough to confound
anybody. But the ability to convey so much communications content with
such a minimalist technology just blows my mind; it's an art that
requires an intimate participation in the communications process. I
like that. If all I wanted to do was talk, I'd pick up a phone. The
technology is the thing, for me, old and new, and one of these days
I'll work though latest Phase-III bird with an upconverted Hallicrafters
firebottle rig, just because.

: Should the exam be more difficult? Are there appliance operators among our
: ranks? Absolutely...no argument from me. But if you want to hear
: obnoxious operators, I think there's more of a problems on 75 meters than
: on 2 meters

The American ham community is a fairly representative subset of American
society as a whole. Crotchety, senile, foul-mouthed old drunks have been
with us a long time. Some of them, unfortunately, have radios and can
inflict their pathetic decrepitude on more people than they ever could at
the corner drugstore. Personally, I think CW _is_ a lid filter of sorts,

and so are the tech and rules exams.

The problem is, it isn't used often enough. If you had to test to meet license requirements every time you went to renew your ticket, I suspect that many of the most serious offenders would have long ago become the non-hams they really are. I wouldn't mind retesting every 5 years, even, if it meant shutting down the maggots that infest our bands. And given the current level of technology being used in the communications industry, I think it would be a fine idea to fold _all_ the existing Elements into the General Class exam, and allow Extras to really work for their privileges.

: I'm not into DX and really have no great desire to get into it, for now. I
: am into experimenting with computer interfaces and repeaters. Isn't that
: what removing the code was supposed to encourage?

Yup. I intend to find out if DX is fun. But I'll have a packet station up before then, I expect, and be listening for satellite beacons. There's lots of room to learn, and grow, and have a lot of fun and maybe contribute something to the community while we're at it. But I also accept that CW is and should be an important part of amateur HF operations, even though in the long run I fully expect HF to become the real communications ghetto, as virtually every important use it ever served is replaced by satellite-borne equivalents.

Cheers es 73

Wow Drew!...you are really a cry baby...were you one of those guys
in school that could never do a project on your own? Always
using someone elses paper. Always crying when an exam came up..
always looking for the easy way out? Is there anything that you
think is worth working for? Do you think the average guy wants
to become an engineer or tech to get on the ham bands? I don't
think so..Therefore lets get rid of all the theory too..who needs
it now anyway..it's pretty much useless for the average person..
I bet if it wasn't a simple memorization game, you'd be bitching
about that too..Well I've lost respect for amateur radio because
of people like you, so I don't care anymore if they get rid
of all the requirements and soon I am sure I will be cussing and
jamming with the best of them..

>-Drew in Charlotte-

Hello, Drew,

Please do! The ARRL Board of Directors has sent our "pro-code stance."
They have based their position on their interpretation of the wishes of
the amateurs in their Divisions. Unfortunately, they do not necessarily
hear from a cross section of all amateurs, they hear from a cross section
of people willing to communicate with an ARRL Division Director. :-)

I do suggest that you be as constructive as possible. Starting off with
a string of insults (not that anyone on this forum would ever permit a
lapse of ettiquette, mind you, but accidents do happen) will not
accomplish as much as a reasoned statement of your beliefs and a
reasoned explanation of why you believe so will have a lot more effect.
If you are an ARRL Member, say so. If you have chosen not to be an ARRL
Member over the code (or any other) issue, say so, too. If you will
become a Member under any specific circumstances, explain them. The
Directors do listen to all hams, but I do imagine that most give more
weight to our Members. If you would like more information about ARRL,
the Director can offer that, too.

I do not agree with every action of the ARRL Board, but I have a lot of
respect for a group of people who do what they do for no financial
compensation, donating an unbelievable amount of time to attend hamfests,
local clubs, ARRL Field Organization meetings, ARRL Board meetings and in
general spending a lot of time on the phone, etc.

All of our Directors are available by email. I hope I speak correctly
when I say that the ARRL email list is available on our Web page. I do
know it is available at our ftp site or automated email server. In
addition, page 8 of any recent QST lists their addresses and telephone
numbers. (Now, I ask you, would YOU publish your home phone number in a
major ham magazine? :-)).

Having said all that, I will add my own personal belief. (It has no more
effect on League policy than yours, maybe a bit less.) I think that the
division in our ranks is causing us a lot of damage. The flameage and
outright animosity I have seen here hurts us more than code or no code.
I think that any solution that does not consider the needs of those who
have gone before you cannot work. Somehow, some way, we need to find a

solution that recognizes that Morse Code is not as important to the world as it was 20 years ago, but one that also recognizes that it is mighty important to many of us.

I have seen a proposal to allow a 5-wpm code test for HF access. Unfortunately, from what I have seen, when one learns code at 5-wpm, one has not acquired a peramanent skill. People who pass that 5-wpm test and do not use code forget the whole thing in a year or so. To ask someone to pass a code test just to say they did it is, IMHO, worse than asking them to pass a code test that will really stick. At 13 wpm, almost everyone learns something they never forget. They slow down, but never forget. *IF* we are going to require code, we should make it something worthwhile.

I don't have all the answers. All I have is a feeling that what we are doing right now, with the division and hatred I have seen, is not the right thing. I am willing to respect the belief of some hams that code is not essential to Amateur Radio. I wish more that held that belief were willing to respect the belief of people like me that tradition has value, too. People who respect each other usually find themselves seeing eye to eye, somehow. Maybe there is a solution in there somewhere.

Anyhow, end of soapbox mode. Good luck with your Division Director. John Kanode and I see each other every year at the ARRL West Virginia Convention. If you can get to Jackson's Mill this year, stop by and say hello.

73 from ARRL HQ, Ed Hare, KA1CV, ARRL Laboratory Supervisor.

Ham radio and sports do not in any way go together.
Ham radio and boring or sit on ass, now they go together.
You think contesting is fun.
You must be the life of the party.

The next ARRL/VE testing by the BEARS club in NYC will be held on
Monday, Dec.11 at the ABC building at 125 West End Avenue (66th street)
at 5pm. No test will be started after 7pm. Cost is $5.90 (exact change
appreciated). Bring any CSCE's, your original license and a photocopy and
two pieces of ID. (at least one being a photo ID)

The BEARS VE hotline for future testing is: 212-456-5224.

Thank you.

David,

While this group does seem to explode into flame wars periodically,
we seem to be going in to a rather severe phase. One semi-pro flame
baiter who normally disappears after the school term heats up is
staying on longer than usual, and some new folks seem to have
taken that individual's lead in style and (poor) etiquette.

With the exception of a few individuals and a few specific repeaters,
I have found most hams to be courteous, helpful, and interesting, both
here in So. Cal. and across the country (I travel frequently). There is
a wide variance of opinion on many matters, ham related and non, and
yes, several know-it-alls who disparage those with "lower class"
licenses. These people have been around ham radio for quite
some time though. I am reminded of a group of hams insisting
I could not use a particular antenna on a mobile CB installation
without an extension mast. This was about 1973. I had used that
particular set-up frequently, tested it, got low SWR's and great
performance, but they had to know better, they were hams.

Elmer's do still exist, and hopefully this news group will settle down
again so serious discussion can proceed (I'm still looking for some
help with an external local oscillator for the Motorola fm receiver chip).
There are several helpful folks in this news group. Gary Coffman
for one, Karl Beckman, and others. I have found that the net-Elmers
also debate their issues well, and (mostly) on the issues, not ad hominum
attacks. Unfortunately, some of the other good Elmers here have faded
away, likely due to lack of content in this group.

Welcome back Dave. Drop me an E-mail line if you think I can be of help.

Hams are the most prolific users of twitware. They have no desire to be
exposed to a different idea or view. They are the consummate ostrich.

Probably - The FCC is being underfunded and re-organized because most if not all of their frequency monitorring activities will eventually be done by the National Security Agency.

What makes me feel this may be true is the mention in the press that there may be closures of existing monitorring field stations by paid staff and these
functions will be controlled remotely from a centralized site in the state of
Maryland.... hmmm Fort Meade?

I'm an example of EXACTLY who was supposed to be attracted by the codeless license. I've been a broadcast engineer for 20+ years and I work with computer systems. It WAS the code that kept me from getting my Ham ticket years ago. I won't call it obsolete or outmoded, it just doesn't interest me and I find it difficult to devote the time to learn something I'm not interested in and would likely never use. I've never promised to upgrade and never claimed to be working working on an upgrade. I too could likely pass the Extra written exam without any trouble.

Should the exam be more difficult? Are there appliance operators among our ranks? Absolutely...no argument from me. But if you want to hear obnoxious operators, I think there's more of a problems on 75 meters than on 2 meters

I'm not into DX and really have no great desire to get into it, for now. I am into experimenting with computer interfaces and repeaters. Isn't that what removing the code was supposed to encourage?

This thread is starting to get way off base guys!

The hobby has many features that meet the needs of the hams who utilize those features!

Not everyone is interested in microwave and not everyone is interested in CW.

I have been a ham since 1959 and would like to see the code above 5 wpm abolished and perhaps a typing test put in its place.

On the two machines I maintain, one uses "911" to get 911.
Anything else requires a specific preamble to work.

I just checked a FasTalk 1200 on an old Mac Plus around the corner. The factory supplied "wall wart" is rated 9 VAC at 600 ma. Polarity is not an issue. Hope this helps you out.

What's the matter Burton? Can't you work 100 countries from MA? Or is
it that the DX doesn't want to talk to YOU? You must be one of K1MAN's
little buddies, soured on everything and everyone from some minor
childhood trauma. Mother doesn't breast feed you anymore? Got a good
case of Occularectalitis, seems to me. If they've run you off the 2m
repeaters, packet and the 75m foul mouth nets, why don't you try
building some microwave or TV gear? You claim to be a teacher. Can you
teach anything other than H & D? Better yet, why don't you sell your
Extra Class License to some new no-code Tech who could benefit from
what you find so contemptuous?

IMHO there is probably very few "open patches" around the country.

To be truly open the patch would respond with any good phone number or 911
with out any access code.

There are many errors in the repeater book. For two or more years the two local
repeaters here showed "OPEN PATCH" in book when we had no intention of having same.

We do have open repeaters but not open patches. We do encourage our members to
bring up the patch for visitors.
Many newer hams confuse "open repeater" with "open patch".

Like I said many errors happen between here and the time it finally gets to the
printer, when they print the Directory.

> Greg, KD4HZ

Greg, you're on the right track but no such critter. Only other
possible suggestions I have are:

1) to possibly key the radio and dial "* + phone #" or "* + 911" (for
emergencies) as a continual string. i.e., without unkeying to hear
the dial tone. Some repeater use a modulation detect circuit; so be
sure to say something before dialing, or

2) to try to get attention and maybe someone to help you (in an
emergency) - try the use of LiTZ. LiTZ may be a critter that might
work.

Good luck...,

I've been a ham since the mid 60s, and the term "appliance operator" was being thrown around way back then. About that time, I bought the Drake R-4 and T-4X pair, which would have easily qualified me as such. At least it was possible to repair that equipment oneself, and the complete schematics were furnished with the manuals. Even instructions to perform a complete alignment were included, and it could be accomplished with such mundane test equipment as an RF signal generator and a VTVM.

Tell me, how many people can troubleshoot/repair the likes of the IC-775DSP or a similar high-end transceiver? They're like the latest cars and trucks, requiring special test equipment and techniques, to service.

I'm interested in QRP operations, and a lot of low-power enthusiasts are still into homebrewing, but how many Extra Class hams still do much building? I spent 8 years working on FAA-style Air Traffic Control radar systems, and don't feel all that qualified to build much more than a Heathkit which, sadly, is no more.

Is there a universal code used to access autopatches designated
as open in the repeater directory? The local machine has a closed patch
so understand keeping the codes under wraps but now that I finally got
a handheld I can take with me would like to know how to do so when
traveling . I'd been told asterisk "*" to bring it up and pound "#" to
bring it down might do it but that didn't work
on two different repeaters I tried on a recent trip. Couldn't raise anyone
to ask about it on one of the machines (but I was hitting it) and on the other
the person I got while in range didn't use the patch so didn't know.

Surely there is such a critter if only to get to 911??

SB SPCL ARL ARLX071
ARLX071 Philip Rand, W1DBM, SK

Philip S. Rand, W1DBM, died November 27, 1995, in Lebanon, New Hampshire, after a brief illness. He was born in Newtonville, Massachusetts, and was 89 years old.

He was an electronic engineer for the Remington Rand Corporation in the late 1940s, when Amateur Radio faced a crisis in the form of interference to the early VHF television sets. Rand worked with the ARRL to develop TVI suppression techniques for channels 2 through 6. ARRL's then Technical Editor George Grammer, W1DF, designed high pass filters for the primitive TV sets, while Rand developed new methods of shielding for amateur transmitters.

Rand published articles in QST spanning 50 years, from ''A Shack on Wheels'' (1933) to ''The Beeper, An Audible Frequency Readout for the Blind Amateur'' (1983).

During the TVI days Rand lived in Redding Ridge, Connecticut, and worked closely with ARRL staff member Lew McCoy, W1ICP (now retired). McCoy remembers Rand displaying in his office a computer that used 12AT7 vacuum tubes--it was the famous UNIVAC. McCoy called Phil Rand ''my tutor in TV interference.''

He served as ARRL New England Division Director in 1955 and 1956.

In October 1995 he received the President's Award from the Quarter Century Wireless Association.

Among his survivors are his wife of 59 years, Louise; and three daughters. Funeral and burial were scheduled for November 30 in Haverhill, New Hampshire.

To all radio amateurs

SB QST ARL ARLB105
ARLB105 Award to Wyoming youth

The ARRL Hiram Percy Maxim award has gone to Beth Harris, KJ7FC, a 15-year-old Amateur Extra Class licensee in Cheyenne, Wyoming.

Beth was first licensed as a Novice in 1993 and advanced to Extra Class in little over a year. She is an active operator and a member of the SHY-WY Amateur Radio Club in Cheyenne.

Beth, a sophomore at Cheyenne East High School, is active in several student organizations, including French and Amateur Radio clubs, and has been singing in choirs since she was five.

Beth was nominated for the award by Paul M. Crips, KI7TS, a communication technology instructor at Carey Junior High School in Cheyenne, who said Beth ''has a true love of life, learning and exploration. With young operators like Beth, Amateur Radio will always have its rightful place as a national resource.''

Beth was honored at a luncheon on November 15, attended by her parents; school officials; ARRL Wyoming Section Manager ''Rev'' Morton, WS7W; former Wyoming SM Steve Cochrane, WA7H; ARRL Public Information Officer Wilson Sellner, WB7RRZ; and ARRL Rocky Mountain Division Director Marshall Quiat, AG0X.

The Hiram Percy Maxim Memorial Award recognizes outstanding under-21 licensed amateurs and includes a 1000 dollar cash award. Nominations are made through ARRL section managers with a deadline of March 31 each year.

Typical of those arogant individuals who NEED something to make them
feel superior.
Guess what Mike. I'm 37 have passed the General and Advanced (100% on
advanced, can you say that?). With a busy work and family life AND
wanting to spend my precious time on something useful I haven't placed
wasting 30 minutes a day for a month on learning 1800's technology
high on the list. I'm a Tech. I build my own antenna's, DSP
hardware/software, modify/tune/build radios and amps, program UNIX.
Who knows, I may never learn code - one of the reasons is HF is a
don't care in my book. My experience has been that those who adamantly
believe code is so important are typically defiencient in their
knowledge of modern technology.

FAQ: US Automatic Reciprocal Operation in Canada

Q1: I have an FCC-issued amateur license. What do I have to do to
operate an amateur radio station in Canada?

A: A reciprocity treaty, TIAS 2508, provides for US-Canada reciprocal
operation of amateur radio stations. No application, registration, or
fee is required. You are automatically eligible to operate in Canada
if all three of these conditions apply:

1. You have a valid FCC-issued license;
2. You are a US Citizen;
3. You are a resident of the US (if you're not a US resident,
please direct your questions to a Canadian official. As I
understand it, if you become a Canadian resident, your US
license is good for a while, but they expect you to get
a Canadian one eventually).

(GR2.45.1.a, RIC-25 p. 9)

Q2: What privileges do Canadian operators have?

A: Legally, Canada has no separate phone band or other mode
restrictions. Instead, they adhere, on a voluntary basis, to a
bandplan, similar to the way we use 160 meters. (The IARU Region 2
bandplan can be found in Chapter 2 of the ARRL Operating Manual.)

Canadian amateur bands are the same as those in the US up through 1.2 GHz, except they have all of 220-225 MHz, and they only have 430-450 MHz. There are, however, bandwidth limits (-26 db):

160, 80, 40, 20, 17, 15, 12 meters: 6 kHz maximum bandwidth
30 meters: 1 kHz
10 meters: 20 kHz
6, 2 meters: 30 kHz
220: 100 kHz
440, 902: 12 MHz
1.2 GHz and up: none specified

(Schedule II, RIC-25 p. 15)

Q3: What privileges am I allowed while operating in Canada?

A: All foreign amateurs, including those from the US, are assigned reciprocal privileges according to the Morse Code speed needed to qualify for their license:

12+ wpm: All "Advanced + 12" privileges
(i.e., *all* Canadian privileges)

[US General, Advanced, Extra Class]

5-11 wpm: All privileges above 30 MHz,
PLUS CW and CW only on all bands below 30 MHz;
limited to Basic privileges [*]

[*] *Canadian* Basic + 5 wpm licensees are allowed full access above 30 MHz, plus (full) access to 80 and 160, only. However, the above *is* what the rules say about *foreign* amateurs operating in Canada.

[US Novice Class, Technician + 5 WPM code]

0-4 wpm: All privileges above 30 MHz, with Advanced privileges

[US Technician without code]

(GR2.45.2,3,4, RIC-25 p. 9)

Q4: What's the difference between Basic and Advanced?

A: Without Advanced Qualification (or equivalent), you may not:

1. posess or install a transmitter or amplifier that isn't commercially designed and manufatured;
2. posess or install any radio apparatus manufactured specifically for use as a repeater where input and output are on the same band;
3. install a repeater where input and output are on the same band;
4. set up a club station

(GR2.47, RIC-25 p. 10)

Basic operators are also limited to lower power.

Q5: What are the power limits?

A: An Advanced operator or equivalent can use up to 1000 W dc input, if power is measured as input to the final stage, *or* an output of 2250 W PEP SSB/750 W carrier power for other modes, if output power is measured.

A Basic operator or equivalent is limited to 250 W input, *or* 560 W PEP SSB/ 190 W carrier power other modes, output.

It is illegal in Canada to posess or install a transmitter or amplifier capable of exceeding your legal maximum power by 3 db.

(GR2.58, RIC- 25 p. 11-12)

Q6: So a General class licensee can transmit phone on 3760 or even 14140 kHz? And a Novice can use a 2 meter repeater?

A: Absolutely.

Q7: But I heard that the FCC won't allow you to exceed your US operating privileges, even in another country.

A: I personally called the FCC and was able to confirm that this is NOT the case. The FCC does not enforce Part 97 in foreign countries. Despite what you may have read, it is perfectly legal to use whatever privileges Canada allows you (see above) while you are operating a station in Canada.

Q8: How do I identify in Canada?

A: If you're operating under your US license, then you use your call "mobile" (if you are) or "portable" (if you're not), *followed by* the appropriate indicator:

Nfld: VO1
Lab: VO2
PEI: VY2
NS: VE1
NB: VE9 (since Dec 1993; prior to this it was part of VE1)
Que: VE2
Ont: VE3 or VA3
Mtba: VE4
Sask: VE5
Alta: VE6
BC: VE7
NWT: VE8
Yukon:VY1

On CW, RTTY, and such you just use a slash, for example, I would use "KG2S/VE2" in Quebec.

The treaty requires you give your location by City and Province/Territory at least once per contact, but the Canadian rules

make no mention of this.

While the treaty requires English ID, the Canadian rules allow you to use French, too. A chacun son gout. (However, you are not limited to English or French during your contacts; you can use any language.)

Of course, if you operate a Canadian station or get a Canadian license yourself, you use that callsign.

(GR2.57.1-3, RIC-25 p. 12)

Q9: What if I'm not from the US?

A: You will have to contact Communications Canada (numbers below) and apply for permission to operate. If your country has a reciprocal agreement with Canada, your privileges (once licensed) will be those outlined in Question 3.

If you, as a US licensee, want a Canadian license, you may be able to get it merely by passing a 26-question rules exam and giving a Canadian address. I know of at least one Advanced-class licensee who has done this with a Delegated Examiner. A Canadian station license carries an annual fee (currently about CDN$24), and license terms end 31 March of each year.

Q10: I'd like to get a copy of the Canadian rules. What do I do? Where do I address questions if I'm in a "gray area"?

A: I highly recommend getting a copy of the rules. They publish a number of circulars called RICs that you can order from Industry Canada. They sent me these without charge. You can get them in French, too, of course ("CIR-25", etc.).

ON THE WEB: Most are also at http://www.cam.org/~dino/ric.html.

RIC-25: Rules and Regulations affecting the Amateur Service. 24 pp.

RIC-3: Banned Countries/Reciprocal List/Third Party Traffic List

RIC-66: Addresses and Telephone Numbers of Regional and District Offices

If you want information on exams in Canada, ask for:

RIC-24: Information on the Amateur Operator's Certificate Examinations

RIC-1: Information on the Delegated Examiner system

There are a lot of District offices, so I'm only going to list one in each Province. You can ask them to mail the rules to you, or you could get the address for the office closest to where you'll be visiting and go pick up what you want there.

I have a heavily modified version of "SendMorse" that will send code from
a text file at various speeds. It has some bugs, but got me past 18 wpm.
If I get enough requests, I'll ask someone to put it up on a www site.
If not, I can email a compressed and uuencoded file.

From: pmn@tharp.demon.co.uk
Message-ID: <pmn-3011951911320001@tharp.demon.co.uk>
Source record: 234589

I hope this is the correct group to put this question. I'm not sure if anyone can help but I an trying to find out whether it is at all possible to convert these walkie-talkies to the 70cm band. I brought a MX 360 out of curiosity. It is the UHF model but I can't tell if it is high or low band (I believe low), but no TX/RX. I think that this particular one was designed for some special use. The guy who sold it seemed to have a lot of them going for dirt cheap and said that the conversion was possible with little difficulty. Though I must say I was rather suspicious. When I tried to get any specifics from him he tried to avoid a direct answer. I also found a MX 330 which is working TX/RX on one freq. (around 455MHz). Any help or info would be really appreciated.

Thanks,
Ronald Newell (N2YSV)

>to require all ID on the transmit channel.

> Therefore - starting in 1996 the Marathon NCS on all nets will tell
>all stations to ID simultaneously every 10 minutes.

>Thanks to everyone who provided input -- You made a difference.

Clay, and others with a similar event situation, may I recommend a simpler procedure: Stations contact net control (and visa-versa) using their tactical callsign. At the end of the traffic, clear with the tactical followed by the operator's FCC callsign. Event traffic is generally less than 10 minutes, so all part 97 requirements have been met.

A sample:

M5: "Net control, Mile five."
NC: "Mile five."
M5: "We have a runner down at this location, number 1234, male, 45 years old, pain in his right knee."
NC: "OK. Medics enroute, ETA 5 minutes. Net Control W2XYZ."
M5: "Mile Five, KA2ABC."

Source record: 234595

When a person works hard for something and succeeds, its
value is more important to them. I've operated on 75 for years
and most of the problems come from those call-less or
ball-less wonders that don't have hf privileges, and those
that just make them up or use OPC. Two of them were recently
caught in Massachusetts and one in Virginia..

Hundreds of thousands of people have successfully passed their
code tests and have upgraded to whatever they desired..I am
not necessarily against another class of license allowing
limited operation on hf, but these whining little cry babies
that want to discount all the work and time hundreds of thousands
have gone through and make it mean nothing sends a message of
"screw it why bother to work for anything, it'll be free soon"
and I'm not just limiting it to radio--..

It just cracks me up to see a few whining babies slobbering all
over their keyboards...My impression of them is laziness
and potential career welfare recipients..who cares whether you
like cw..who cares whether you ever use it again. Yeah it's
a primitive form of communication, it's kinda like learning
how to build a fire in the scouts without matches, or even
having to memorize the little scouts oath. I think of cw as just
a little initiation that may someday come in handy. It separates
the requirement-less CB level from the amateur radio level.
For all the man-hour whining I have heard out of Drew, he probably
would have been able to decode Amtor in his head by now..
Take a damn vitamin E or something..
Again I reiterate, especially to Drew:

Waaaaa! Waaaaa! Waaaa!

What an EXTRA Class Cry Baby

>pruth@ocvaxa.cc.oberlin.edu

Self-policing means essentially policing *yourself*, IE making
sure *you* obey the rules. If each of us does that, then things
are lovely. Unfortunately, there are those who will not self-police.
Those people need to be other-policed. The primary other-policeman
is the FCC, but they haven't been doing much of a job of it lately.
The Amateur Auxillary and the Official Observers are volunteer
amateur other-policemen. While they have no real authority, they
do ocasionally extert some influence directly on amateur behavior,
and indirectly through motivating the FCC to act.

Our most effective other-policing, however, is peer pressure.
One of the more powerful tools of peer pressure is the shunning.
By simply refusing to interact with those who we believe are
behaving badly, we can have an influence on them. (This is most
effective if it is a group effort.) A more direct tactic is to
reprimand the miscreant *off the air*. A letter to his callbook
address, or a telephone call, can sometimes have an effect. Again,
a group effort in this direction can be helpful. Don't threaten
or flame, simply express your disappointment in regard to their
improper behavior, and ask them to improve.

Don't confront a persistent miscreant on the air. This offers them
the attention their sick minds desire. And don't stoop to their level
by jamming or otherwise flaming them on the air. That too is the type
of attention that they crave. For persistent problem children, enlist
the aid of the Amateur Auxillary. They can sometimes influence the
FCC to step in. Complaining directly to the FCC is generally a waste
of time, unless you happen to have an in with someone at the FCC.

Now some people may be inadvertently breaking a regulation or overstepping a custom, and a kindly word will usually be sufficient to steer them back in the right direction. This is a judgement call, but is the only time you should attempt to correct behavior over the air. Mostly you should exert your good influence by being a proper role model. People naturally emulate those whom they admire. If you act in an admirable manner, people will follow suit.

Source record: 234597

Bruce W. Forsberg (forsberg@cts.com) recently wrote
in <30bd3ef6.4214340@news2.cts.com>:

: We are having problems locally in San Diego with our ATV repeater on
: the 900 Mhz band. The input is being torn up by radar. I was wondering
: if anyone knows what radars are present on the 900 MHz band. We are
: guessing that it is some sort of Navy radar. Possibily ship based. If
: anyone has any ideas they would be appreciated. The scan rate on the
: radar is about 5 seconds with a PRI of about 5 ms.

You are probably seeing a Part 15 data network. They are operating at one
watt using spread spectrum. Many of these data transmitters are on pole
tops or buildings. You might be experiancing the primary user of our 902
band, the automatic vehicle locating service. Pacific Teletrac operates
high power wide band digital data from multiple mtn tops to track fleets
of vehicles all over southern California.

Good luck trying to run an AM video system in all that noise! You might
want to operate on 1240+ MHz or digitize your video on 902.

For some information on 902 MHz Part 15 data networks you might try browsing

http://www.metricom.com/

ARLD060 DX news

ZCZC AE36
QST de W1AW
DX Bulletin 60 ARLD060
From ARRL Headquarters
Newington CT November 30, 1995
To all radio amateurs

SB DX ARL ARLD060
ARLD060 DX news

This week's bulletin was made possible with info provided by Walt, G3NYY, Piero, IK1TZO, Jean Michel, F6AJA, Barrie, W3ENL/8, Joe, NJ1Q, Theo, C91BT/PA3CBH, Uwe, DL9GOA, Chris, G4BUE, the Yankee Clipper Contest Club PacketCluster network and Contest Corral from QST. Thanks to all.

VIETNAM, 3W. 3W5FM was worked by AA6TT in Colorado on 1831 kHz around the Vietnamese sunrise.

NORTHERN MARIANAS. Allen, KN6AH, will return to Saipan and Tinian Islands in mid-March and operate for 4 or 5 days. Plans are to run 100 watts on 40 to 10 meter CW and SSB. Allen has been the operator behind the calls VK1AAH and V63SA.

SEYCHELLES, S79. Gerard, F2JD, will continue operating S79JD until around December 8 or so. His return trip to Kenya has been canceled, though Malagasy, 5R, is still on for early January.

MOZAMBIQUE, C91. Theo, PA3CBH, ex-YN1TV, is now working in Mozambique and licensed as C91BT.

EASTER ISLAND, CE0. As part of their return trip from Paraguay, JA7AYE and JA7XQV plan to stop on Easter Island and sign XQ0/ their home calls, probably from late December to January 3. Operations will be mainly CW. QSL via JA7AYE.

SOUTH SHETLAND ISLANDS, VP8. CE9AP is on the air from the Chilean Antarctic installation at Arturo Base on Greenwich Island. QSL via CE2LOL.

GIBRALTAR, ZB2. Jorma, OH2KI, has been on 10 meters operating as ZB2X.

GREENLAND. OX3XR tries to get on 1825 kHz between 2200 and 2300z every Wednesday. QSL via OZ3PZ. OX3LK is also active on 160m.

KERGUELEN ISLAND, FT8. Jean Jacques, FT5XK, is on the air most days on 14136 kHz around 1600z.

JORDAN, JY. Bob, WB9YXY, who was active as JY8XY in October, left his RTTY equipment for JY4MB, who is now working that mode.

ASIATIC RUSSIA, UA0. Oleg, R0/UR8LV, has been very busy on the low bands from Zone 18 recently. Try 160 meters around 0345z.

SWAZILAND, 3DA0. Jon, 3DA0CA, has been working American stations on 160 meters between 2300 and 2400z using a broadcast antenna. After being on 40 and 80 meters, he returned to 160 at 0250 and worked Sweden and stateside stations, including two in Colorado before the band died at 0304z, six minutes after his local sunrise. QSL via W4DR.

ZAMBIA, 9J. Ely, IN3VZE, should be active as 9J2CE until December 5. QSL via his home call.

JAMAICA, 6Y5. Alan, G3XAQ, will be QRV on QRP CW as G3XAQ/6Y5 through December 12. QSL via G3XAQ.

BAHAMAS, C6A. Listen for Meg, N2NQI, Dave, WG3I, Walt, G3NYY, and Tim, G4VXE, signing their home calls /C6A from New Providence Island, IOTA NA-001, December 2 to 10. Activity will be on all bands, mainly CW and RTTY. QSL via home calls, direct or via bureau.

BERMUDA. Bill, KM1E, will sign C6AGN from Green Turtle Cay from mid-December through mid-February, and again from mid-March to mid-April. Operations will be on 160 to 6 meters.

MOST WANTED COUNTRIES WORLD-WIDE. Results from The DX Bulletin 1995 survey, though no surprise, shows North Korea, P5, holding the number 1 spot. In descending order, the rest of the top ten are Bhutan, A5, Andaman Isl, VU4, Heard Isl, VK0, Yemen, 7O, Libya, 5A, Macquarie, VK0, Tromelin, FR/T, Laccadive, VU7, and Mount Athos, SV/A.

THIS WEEKEND ON THE RADIO. Rules for the ARRL 160-Meter Contest appear on pages 130 and 131 in November QST. Info on the QRP ARCI Holiday Spirits Homebrew CW Sprint and the TOPS Activity 3.5 MHz CW Contest are on page 116 of December QST.

From: kap01@interserv.com
Message-ID: <49l8vj$qd0@data.interserv.net>
Source record: 234602

I need some suggestions regarding a problem I am having with one of Kenwood TM241's.

I have only used this radio for packet. I disconnected the rig to move things around and when I hooked it back up and plugged
the DTMF Stock Mic into the radio and turned it on the radio keyed and stayed keyed. I checked the mic with my other 241 and
found that there was nothing wrong with the microphone. I then tried another mic that I have that does not have the DTMF
keypad and the radio functions properly. I only have a problem with the radio remaining keyed when using the mic that came
with the radio. I tried doing a reset but it did not resolve the problem.

I called Kenwood and they had no suggestion except to send it back to their service department. I would much rather find the
solution without having to return the radio.

So....the reason for this message....any ideas??? Please drop me a note with any suggestions to kap01@interserv.com

Thanks,

Kent

>Self-policing means essentially policing *yourself*, IE making
>sure *you* obey the rules.

Gary offered some *excellent* advice on this subject, but, I feel that self-policing means that other amateur radio operators take part in assuring our bands are clean. If not illegal (e.g. I feel it is a legitimate amateur radio operator on the other end), I will advise the station of what I feel they may be doing wrong. Perhaps they will take offense at this, but it is the most direct and effective way to stop whatever may be going on. You won't make friends this way, but you well might contribute to cleaning up the mess, in a very small way.

If there is clearly an unlicensed or unidentified station causing problems then my advice would be to steer clear and say or do nothing. The worst action you could take in that case would be to respond to anything and encourage whatever may be going on. If I felt the nonsense was local in nature, I might want to try to DF him (her)..but would not get directly involved in confronting them.

I would probably then report what I had learned to one of the local amateur clubs or bring it to attention of ARRL.I doubt the FCC would care one way or the other without pressure from an organization.

This of course is purely my opinion and mine alone, for whatever that is worth.

ARRL Bulletin 106 ARLB106
From ARRL Headquarters
Newington CT November 30, 1995
To all radio amateurs

SB QST ARL ARLB106
ARLB106 PRB-1 clone in MA

A new law in Massachusetts will put the language of the FCC's federal preemption of state and local laws affecting amateurs (PRB-1) on the books in that state when it takes effect next year.

H-2782, a bill in the Massachusetts legislature, was written by ARRL Volunteer Counsel Thomas Carrigan, WA1NVS, in 1992. The bill was passed by both chambers of the legislature earlier this year, then sent back to the legislature by Governor William Weld, for modification. Both chambers of the legislature then enacted the bill in the last week of this year's legislative session and sent it to the governor, who signed the bill into law on November 21.

The bill becomes law 90 days after signing, and is assigned to Chapter 225 of the Massachusetts General Laws.

Eastern Massachusetts ARRL Section Manager Phil Temples, K9HI, said ''Like PRB-1, the new Chapter 225 does not give amateurs a green light to do anything they want to do with their antennas. You are still bound by the zoning laws of your city or town, and you will still have to go through the same process for approval that you have to go through now.

''So what's the difference? Now, when you go to your town hall, you can point to Chapter 225 as requiring that local regulations be reasonable. If you should find it necessary to go to court for satisfaction, you can choose state court or federal court. State court trials would be less expensive, but the precedents set in PRB-1 cases do not transfer to Massachusetts courts,'' Temples said.

Carrigan has written a primer for Massachusetts hams on what the new law means. It is available on the World Wide Web at http://www.ultranet.com/~shawn/wa1nvs.html

Temples also suggested that Massachusetts amateurs who contacted their representatives and senators in support of H-2782 now send a note thanking them for their support.

>Plus tickets and lower are any less competent than my friends who are
>General class operators and higher.

I'd have to agree that license class doesn't tell you much of anything. There's a ham that I work with who's been licensed for decades, and has forgotten more about radio than I know. He's Advanced, I'm Extra. Another, who used to work here but has since moved on, builds and maintains repeaters and links for one of the local clubs. He's Tech+. His job here was developing IC package models using time-domain reflectometry.

The only valid bozo filter is exams that genuinely test radio and electronics knowledge. Our current multiple-guess system doesn't necessarily do that. Now, I like CW, it's a fun mode, but I don't have any illusions about it being a filter or commitment tester. I think we should still teach it because it is a simple, handy means of communicating, but the need for it is gone. Military, Coast Guard, MARS, everybody has abandoned it for better modes.

MI>ind
MI>it?

Mike,
I'm currently using a program called NewMorse 1.3 This is a windows program which interfaces with my sound card. It works really well. I downloaded it from America On Line. I've also seen it in WWW in various places. Just look around. If your board has a file list look around they may have it.

The above file is too large for me to zip up and send to you as an attachment but I have a dos program that I can zip and send to you (if you are capable of receiving attached files with your mail). This program worked really well also, only it does not interface with a sound card. When working on higher speed practice sessions I've found it much easier to have head phones on (specially with kids around). If you can't find the NuMorse file let me know your mailing address (post office) and I'll be glad to send you a floppy N/C.

Good luck

Dear om's !
Please,
Is there anybody who can prompt QSL information for the stations,
wich was active in CQ WW DX CONTEST's (CW & SSB)

Thank you in advance.

Ark,
UA4CC 5B DXCC # 1803 DXCC HONOR ROLL

I agree with you, John. Took the advanced and the extra one month apart about
a year and a half ago, and by far, the advanced was the harder. I aced the
extra as well. This is more a testament to the fact that I am a good test
taker rather than that I am an electronic whiz. I am not.

Take care. Joe Keenan AA2WE

Putting aside all the arguments which have raged here
since Marconi was a Novice -- (in other words, deactivate
your flame thrower, and substitute brainpower for firepower.)

Just supposing--
1) WARC 99 removed the Morse requirement from Amateur
Service regulations, and;
2) FCC then decided to amend US regulations to remove
the Morse requirement from Part 97.

And assuming--
1) A beginners (entry class) license is desireable, and;
2) A system of encouragement and recognition of advanced
knowledge and/or skills is desireable.

What recommendations would you make for changes in the
testing and licensing structure for licensees in the US
Amateur Radio Service?

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 30/2330Z NOVEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 30 NOVEMBER AND FORECAST FOR 01 DECEMBER - 03 DECEMBER

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 74/11

GOES satellite data for 29 Nov
Daily Proton Fluence >1 MeV: 5.3E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 1.3E+07 (normal)
X-ray background: A2.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
01 Dec 02 Dec 03 Dec
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 01 Dec: 74/11

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 29 Nov
Learmonth 7 3223 2111
Fredericksburg 14 14
Planetary 10 13

Observed Kp for 29 Nov: 3253 2222
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
01 Dec 10 quiet to unsettled with possible isolated
active periods.
02 Dec 10 As for 01 Dec.
03 Dec 10 As for 01 Dec.

COMMENT: Brief periods of active levels are possible through
until 4 Dec.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
30 Nov Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
01 Dec Normal Normal Normal
02 Dec Normal Normal Normal
03 Dec Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
30 Nov 30

Observed Australian Regional MUFs:
Townsville: 15-30% enhanced 06-11UT and 13-15UT.
Sydney: near predicted monthly values with blanketing
sporadic E 03-04UT.
Hobart: near predicted monthly values with blanketing
sporadic E 04-05UT.

Predicted Monthly T index for November: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
01 Dec 15 near predicted monthly values with possible
sporadic E conditions.
02 Dec 15 near predicted monthly values
03 Dec 15 near predicted monthly values

But this could present a problem in metro areas, such as large cities with
many surrounding 'sub-cities'....lets say the repeater phone line was in one
of these out lying cities. When one would dial 911, they would get the local
police, not neccessarly the police they wanted.

Hummmm. I seem to recall some discussion of sharing the top of the
440 MHz Band with some Radar Systems, perhaps a Doppler profiler.
Perhaps, if you looked at half of the ATV freq. you may find the foe
near or in that band.

>On the two machines I maintain, one uses "911" to get 911.
>Anything else requires a specific preamble to work.

This is the case on many machines, however in some cases abuse of the 911 patch has forced operators to use a different and unpublished code. If I need 911 and I am not near a repeater that I have patch privileges on, I usually request "a control operator or anyone who can assist with a 911 call." I have never had a problem this way. OTOH, if that did not bring a response, and I indeed had a life threatening emergency, I'd pound 911 and see if it worked.

I spend a fare amount of time on the road, and see a lot of things that should be reported to the Highway Patrol, and I do try to call them in. The most serious one however was just before I got my license. A guy passed out while driving on a very busy freeway near LA airport, and mercifully crossed four lanes of traffic and ran up an embankment without hitting anything. While my associates rendered aid, I ran to the nearest callbox, in a 3 piece suite and wingtips yet, only to find it out of service. I then ran to the nearest office and asked to use there phone for a medical emergency. I then had to explain that I was not the victim. I must have looked pretty worn down by then. :-) No, I didn't have a cell phone either, but we did get the guy aid, and I think he made it. The radio is better and more reliable.

>locator be considered an athletic event ???????

I agree with you Gareth. Contesting has no more to do with sport than curling or bowling does. The Olympic committee actually considered curling as an Olympic event, but I think they turned it down due to lack of athletic motions.

I did a lot of Fox hunting though, and believe me, it's not always driving around in a car. In Norway we always did it like Orientering and we had small homebrew 75 meter xmitters hidden several places with a map explaining what frequency the next "fox" was transmitting. We used small receivers that we purchased as kits and homebrew DF antennas. The event always took place in the forests. This was definetely a sport AND I think the original Fox Hunt. The only disadvantage is that it excludes many of the members in the club due to the big age spread.

Source record: 234627

I saw a neat job done by routing the cables through a PVC pipe
(obvisously requiring a hole!)...then take a PVC cap, drill cable-sized
appropriate holes...next step: cut the cap in two, slip the two halves
over the cable(s) then clamp'em together with a hose clamp like you use
on your car's heater hose.

Considering that all an FCC license does is give *back* some of that which has been taken away by the Communications Act -- it does NOT take anything away from someone to give it to someone else -- the comparison falls flat.

Message-ID: <49ja2m$1n9@crow.cybercomm.net>
Source record: 234661

When a person works hard for something and succeeds, its
value is more important to them. I've operated on 75 for years
and most of the problems come from those call-less or
ball-less wonders that don't have hf privileges, and those
that just make them up or use OPC. Two of them were recently
caught in Massachusetts and one in Virginia..

Hundreds of thousands of people have successfully passed their
code tests and have upgraded to whatever they desired..I am
not necessarily against another class of license allowing
limited operation on hf, but these whining little cry babies
that want to discount all the work and time hundreds of thousands
have gone through and make it mean nothing sends a message of
"screw it why bother to work for anything, it'll be free soon"
and I'm not just limiting it to radio--..

It just cracks me up to see a few whining babies slobbering all
over their keyboards...My impression of them is laziness
and potential career welfare recipients..who cares whether you
like cw..who cares whether you ever use it again. Yeah it's
a primitive form of communication, it's kinda like learning
how to build a fire in the scouts without matches, or even
having to memorize the little scouts oath. I think of cw as just
a little initiation that may someday come in handy. It separates
the requirement-less CB level from the amateur radio level.
For all the man-hour whining I have heard out of Drew, he probably
would have been able to decode Amtor in his head by now..
Take a damn vitamin E or something..
Again I reiterate, especially to Drew:

Waaaaa! Waaaaa! Waaaa!

What an EXTRA Class Cry Baby

I dont remember who posted that nasty story about Joe Reeves and HRE ripping some guy off but I'm here to tell you right now that Joe IS NOT a ripoff artist. I ordered a VFO-120 from him. Sent him a money order in advance and the VFO arrived Wednesday, 7 days after I placed the order by phone. It was in the condition he stated it was and came complete with cable and manual, was extremely well packed in bubble rap and styrofoam popcorn. It had a professional HRE label on it and the address on the label is same one as Joe advertises with on the net. It was also plastered with FRAGILE stickers. So if anyone was wondering, Joe and HRE are OK in my book.

-----BEGIN PGP SIGNED MESSAGE-----

*** The `Linux HAM HOWTO' is posted automatically by the
*** Linux HOWTO coordinator, Greg Hankins <gregh@sunsite.unc.edu>. Please
*** direct any comments or questions about this HOWTO to the author,
*** Terry Dawson <94004531@postoffice.csu.edu.au>.

- --- BEGIN Linux HAM HOWTO part 1/2 ---

Linux HAM-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, 94004531@postoffice.csu.edu.au
v1.9, 21 November 1995

It is hoped that this document will assist Amateur Radio operators in
finding and trying the various amateur radio software that has been
written for or ported to Linux. It is also hoped that as a consequence
of this information being available that more amateur radio operators
will choose Linux as the platform of choice for their experimentation,
and that software developers will choose Linux as the platform for
their software development, further expanding the role of operating
systems like Linux in the Amateur Radio field. This document also
provides some detailed information on how to configure and install
some of the more important pieces of software.

1. Introduction.

This list was prompted by comments that had been expressed in the
various Linux newsgroups about the number of amateur radio operators
that were involved with Linux. It is now clear that Linux is becoming
a popular platform for Amateur Radio development work.

This list was originally called the RADIOLINUX list, but has been
moved into the Linux Documentation Project HOWTO collection, so it has
been renamed the HAM-HOWTO. I make no apologies for the name.

1.1. Changes from the previous version

Additions:
Netrom configuration details.
mkiss - multidrop KISS support.
DARC Web site.
```

Corrections:
Updated AX.25 section.
Updated Microsat section.
Updated sattrack.
Update JNOS section.
Updated Packettwin driver.
Updated RSPF daemon.
Other fixes as submitted by contributors - thanks.

2. Where to obtain new versions of this document.

This list will be periodically posted to the comp.os.linux.announce newsgroup, and to the HAMS list on niksula.hut.fi.

It is also available from the following World Wide Web sites:

The Linux Documentation Project runs a Web Server and this list appears there as The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html>.

Dennis Boylan N4ZMZ <dennis@nanovx.atl.ga.us> makes it available at the following three locations:

www.com <http://www.com/linux/radio/index.html>, www.hboc.com <http://www.hboc.com/linux/index.html> and www.lan.com <http://www.lan.com/linux/index.html>.

John Gotts N8QDW <jgotts@engin.umich.edu> makes it available at: www.engin.umich.edu <http://www-personal.engin.umich.edu/~jgotts/linuxhamsoft.html>.

Dan Todd <dantodd@fusilli.ucdavis.edu> makes it available at the following two locations: wheel.dcn.davis.ca <http://wheel.dcn.davis.ca/~dantodd/Linux/HAM-HOWTO.html>, and fusilli.ucdavis.edu <http://fusilli.ucdavis.edu/Linux/HAM-HOWTO.html>.

Alan Hargreaves VK2KVF <alan@dap.CSIRO.AU> makes it available in Australia at: www.dap.csiro.au <http://www.dap.csiro.au/RadioLinux>.

The Tuebingen Radio Club has it available from their home page at: DARC Home Page <http://www.neckar-alb.de/darc/welcome.html>

Please let me know if you'd like to make it available somewhere too. I'd like to see it on some Web Servers that are accessible from radio.

3. Satellite Software.

The following software is for use in experimentation with Satellite communication.

3.1. MicroSat Ground Station Software

Author
John Melton, G0ORX/N6LYT, g0orx@amsat.org and Jonathan Naylor G4KLX, g4klx@amsat.org

Description
Microsat Ground Station software.

Status
BETA. Version 0.9-Xaw released.

System requirements
Alan Cox's kernel based AX.25 support ver 1.1.12 or better. X-Windows. The programs make use of the Athena Widgets and look much better with the 3D libraries.

Detail
This software allows you to use of a KISS tnc to directly communicate with the Microsat series of satellites. It provides an Athena Widgets based X-Windows interface, and allows you a comprehensive range of means of interacting with the satellite. The software should work with any window manager.

The software provides the following programs:

xpb:
broadcast monitor

xpg:
ftl0 file upload program, message upload program

xtlm:
telemetry display program

downloaded:
downloaded file list viewer

directory:
directory list viewer
message:
message preparation application

viewtext:
uncompressed ASCII text file viewer

viewlog:
display the contents of some log files

xweber:
special program for downloading webersat images

phs:
general purpose PACSAT header stripper

Where and How to obtain it.
John's software is available from: ftp.amsat.org
<ftp://ftp.amsat.org/amsat/software/Linux/microsat-0.9-Xaw.tar.gz>
or ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/satellite/pacsat/microsat-0.9-Xaw.tar.gz>.
Please check for new versions.

Licensing/Copyright
GNU Public License. Freely redistributable, No warranty.

Contributed by:
John Melton, G0ORX/N6LYT, Alan Cox, GW4PTS, Jonathon Naylor, G4KLX

3.2. SatTrack - Satellite tracking program

Name
SatTrack

Author
Manfred Bester, DL5KR, manfred@ssl.berkeley.edu, (510) 849-9922

Description
Satellite realtime tracking and orbit prediction program with X11 color graphics.

Status
Version 3.1 has been released.

System requirements
A vt100 terminal and or X11 server. A Maths Coprocessor is useful, but not essential, for good performance.

Detail
SatTrack is a satellite tracking program that has been written in 'C' language on a UNIX workstation. It provides two different live displays, for single or multiple satellites, and two different orbit prediction facilities. Cursor controls used in both live displays are compatible with the VT100 standard, which allows the program to be run basically from any terminal. An optional X Window graphics display shows the typical world map tracking chart. The orbit prediction can be run either interactively or in a batch mode. In the latter case all necessary parameters are specified on the command line. The program uses the NORAD/NASA two-line Keplerian element (TLE) sets directly.

The current version of SatTrack can track a single satellite and/or display multiple satellites for a single ground station. It also can control suitable ground station hardware, like antennas and radio equipment, and has an autotrack mode in which it switches automatically between a number of specified satellites. For calibration purposes tracking of the Sun and the Moon are also provided. Future releases will provide more options. SatTrack requires about 5 MB of disk space in the full distribution with eight different world maps (2 styles, with 4 different sizes each, to fit everyone's screen and taste) and less than 1.5 MB of memory at run time. More information can be obtained from the SatTrack WWW Home Page
<http://www.primenet.com/~bester/sattrack.html>

Compiling the software under Linux is quite straightforward.
Manfred has designed the Makefile to compile the software
directly under your home directory, this is easy to change.

The steps I took were:

```
# cd /usr/src
# export HOME=/usr/src
# gzip -dc sattrack-3.1.1.tar.gz | tar xvf -
# cd SatTrack/src
# vi Makefile
{Comment SUN4 compile options}
{Uncomment the linux options}
{Select the options you want}
# make
```

Where and How to obtain it.
SatTrack can be found at: ftp.amsat.org
<ftp://ftp.amsat.org/amsat/software/Linux/sattrack-3.1.1.tar.gz>
or ftp.jvnc.net
<ftp://ftp.jvnc.net/priv/kupiec/sattrack/sattrack-3.1.1.tar.gz>
or the SatTrack WWW Home Page
<http://ssl.berkeley.edu/isi_www/sattrack-3.1.1.tar.gz>

Licensing/Copyright
The software is Copyright of Manfred Bester. It can be used
without special permission for non-profit, non-commercial use.
For commercial applications a license from the author is
required.

Contributed by:
Manfred Bester, DL5KR

4. Shack Automation Software.

Software for simplifying tasks in the shack. Examples might include
software for controlling the newer breed of radios, logging programs,
QSL database, or antenna rotation.

4.1. FT-890 remote control

Author
Emarit Ranu, drranu@holly.ColoState.EDU, KG0CQ.

Description
A simple program to control a Yaesu FT-890 transciever via its
CAT port from linux.

Status
Working

System requirements
Yaesu FT-890, Yaesu FIF-232C interface converter or homebuilt
equivalent (Feb 1993 "QST", page 37). Linux, serial cable.

Detail
The program is started with one parameter specifying the com port to use. Once started the program is menu driven. Future versions will support an X-Windows interface.

Where and How to obtain it.
The software is currently only available from the author by email.

Licensing/Copyright
You may copy this program millions of times, the only restrictions are:

o You may not charge ANYONE for the program itself.

o You may not distribute modified versions of the program.

o If you distribute the program, it MUST be the ORIGINAL tar file as received by the author. The README file has to be included.

Contributed by:
Emarit Ranu, drranu@holly.ColoState.EDU

5. Packet Radio

Software for use in conjunction with, or for facilitating packet radio.

5.1. Kernel Based AX.25 networking.

Author
Jonathon Naylor, G4KLX, jsn@cs.nott.ac.uk and Alan Cox, GW4PTS, iialan@iifeak.swan.ac.uk

Description
Software that provides native AX.25 support in the Linux Kernel.

Status
ALPHA. Still under development. In a working state.

System requirements
Linux kernel 1.3.*, or kernel 1.2.* plus patches.

Detail
Jonathon's software provides the programmer with a berkeley socket based interface to the AX.25 protocol. AX.25 sockets can opened for either connected, or connectionless modes of operation. Support to allow tcp/ip over AX.25 is provided. Jonathon has recently added NetRom support and provided fixes and other enhancements to the code. The software comes in two parts, a kernel patch, and the configuration tools and user programs. The user programs included in the most recent distribution are:

axassociate
to associate a particular AX.25 callsign with a userid on

your system.

axattach
to convert a serial device into a KISS device.

axl
an AX.25 listener designed to start a PMS when it receives an
incoming connection. The PMS is still very new.

axsetcall
to change the callsign of a port.

beacon
generated beacon messages every 30 minutes.

call
A linemode AX.25 connection program. Call allows you to make
connections to other AX.25 nodes. It provides file transmit
and receive capabilities, and newer versions allow YAPP
binary file transfers.

listen
a packet trace tool for radio links.

mheard
a program to display callsign heard on radio ports.

netromd
a daemon program to generate netrom routing broadcasts.

noderest
a program to restore netrom routing information from a file.

nodesave
a program to save netrom routing information to a file.

nrparms
a program to configure a netrom interface.

rip98d
an implementation of the rip98 routing protocol.

Where and How to obtain it.
There are a number of different versions of the software. You
must choose the one that suits your version of Linux kernel.
Software for kernel versions older than 1.3.* is available from:
ftp.linux.org.uk <ftp://ftp.linux.org.uk/pub/linux/Radio/>

More detail on where and how to obtain the software is provided
in the AX.25 section of the `Installation, Configuration, Hints
and Tricks' chapter below.

Licensing/Copyright
Most of the software is covered by the GNU Public License, some
of the software is Copyright by the Regents of University

California Berkeley.

5.2. JNOS

Author
Brandon Allbery, KF8NH, bsa@kf8nh.wariat.org

Description
Brandon ported JNOS to Linux. His port is currently of the 1.09 (aka 1.08df) release of JNOS. Future versions will probably be based on Doug Crompton's evolution of 1.08df. Brandon suggests that JNOS for Linux is primarily of interest to people with existing DOS-based NOS configurations (especially server/switch configurations) who wish to switch to Linux or to escape the 640K barrier.

Status
Brandons code was rolled back into the main jnos distribution, so development on the two runs in parallel.

System Requirements.
Any version of Linux along with ncurses 1.8.1 or 1.8.5 (the latter is preferred). Optionally you will require Linux networking (at least loopback and slip).

Detail
If you include the Linux networking code in addition to JNOS, you can link the two by a slip link running over a pty, so that Linux can provide services to your radio users. In this way you can easily add servers without having to build them into JNOS itself.

Where and How to obtain it.
You can obtain JNOS for Linux ALPHA.4 at: ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/jnos/jnos110i.zip> ncurses is available on most Linux ftp sites.

Licensing/Copyright
Brandon's modifications to JNOS are public domain. Most of the pre-existing NOS code is copyrighted and restricted to non-commercial use by the various contributors from Phil Karn on.

Contributed by:
Brandon Allbery, KF8NH

5.3. TNOS

Author
Brian A. Lantz, brian@lantz.com

Description
TNOS is a NOS derivative that is being actively supported and which is available for both DOS and Linux. It features enhancements not found in other NOS versions.

Status
The current version is 2.0 and is stable.

System Requirements
Kernel networking slip support if you want to link the normal Linux network facilities with TNOS. A kiss tnc.

Detail
Brian maintains a World Wide Web server which contains up to date information on TNOS, you can find it at www.lantz.com <http://www.lantz.com/tnos/tnos.html>.

Where and how to obtain it
The current version of TNOS is always available from: ftp.lantz.com <ftp://ftp.lantz.com/tnos/current/linux/>, sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright etc.
Free for use by amateur radio operators and educational oraganisations

5.4. N0ARY Packet BBS for UN*X

Author
Bob Arasmith, N0ARY, ported to Linux (and others) by Bob Proulx, KF0UW, rwp@fc.hp.com

Description
A packet bbs implemented under UN*X.

Status
ALPHA. Bob is running version ARY-0.9 on both Linux and HP-UX. The next version from N0ARY which is called 4.0 is in alpha test/development release. Bob has not been able to bring this online yet and is still running 0.9+kf0uw mods. Bob has about half it working with Alan Cox's AX.25 kernel which would be the desirable combination.

System Requirements.
Linux installation, C Compiler, plus HAM radio TNC hardware.

Detail
This bbs has an excellent packet user interface. It has a compatible set of commands with the RLI bbs so users will be familiar with it immediately. It then extends the command set to be a very nice natural language style interface (e.g "list at allus about KPC-3"). Many csh style bang commands are supported. Also included is a mail interface to provide a packet to internet gateway.

Currently you need to customize the source code for your installation so you need some C programming proficiency.

Where and How to obtain it.
For a Linux version or for Linux information send mail to
rwp@fc.hp.com. For a SunOS version contact bob@arasmith.com.
This code is not packaged for distribution yet since it is not
past the alpha stage of development.

Licensing/Copyright
Copyright by Bob Arasmith, N0ARY, but freely redistributable.

Contributed by:
Bob Proulx, kf0uw, rwp@fc.hp.com

5.5. MBL/RLI message to NNTP and email converter.

Author
SM0OHI, pme@it.kth.se

Description
Software that will convert incoming MBL/RLI messages into either
NNTP or RFC-822 formatted mail messages.

Status
Development, not yet released.

System requirements
Unknown.

Detail
This software would be ideally suited to those who want to
establish a mail and news gateway between conventional tcp/ip
networks and the amateur radio mail network.

Where and How to obtain it.
Not yet availale.

Licensing/Copyright
Unknown.

Contributed by:
SM0OHI

5.6. Packet Cluster Node software

Author
Franta Bendl, DJ0ZY, and Bernhard ("Ben") Buettner, DL6RAI,
root@dl6rai.muc.de

Description
A PacketCluster like system running on Linux.

Status
Released in October 1995.

System Requirements
Linux Kernel version 1.2.0 or greater with Alan Cox's AX.25
version 025 driver, TCP/IP networking, SysV IPC. Also needs Perl

and KISS TNC hardware on serial device.

Detail
PacketCluster nodes have been available for about six years. The original software was written by Dick Newell, AK1A, and is running under DOS. clx is a system which clones a PacketCluster node. To the outside user commands and features are mostly identical, remote PacketCluster nodes, which can be networked, don't see the difference between a generic PacketCluster node and clx. So it fits well into an established network of PacketCluster nodes.

clx is not a user application, it is network node software. As such it is not of much use for the individual amateur. SysOPs of PacketCluster nodes with some experience on both PacketCluster and Linux will find this application interesting.

Here are some of the features of CLX:

o It is fully compatible with the internal PCxx protocol and from a users' point of view. It allows multitasking and different priorities for different things.

o The software detects looping DX spots without generating endless messages. clx filters out such duplicate information. We have implemented a concept which allows us to connect the network at multiple points, which would formerly have been called a "Cluster Loop". clx knows of so-called "active" and "passive" links. The outcome is that more DX information is seen by clx.

o An interface to call your external programs (even dialog programs).

o clx uses modern programming concepts like shared memory for common data, lex & yacc to implement command language, shared libraries to keep binaries small (this is still on our wish list), remote procedure calls for inter process communication. It is strictly modularized with its own dedicated process for every major task.

o Comprises the following modules:

con_ctl
interfaces AX.25 kernel code and provides a socket for local users.

rcv_ctl
manages receive spooling.

snd_ctl
manages transmit spooling.

rm_disp
receive message dispatcher, forwards messages to other

processes.

usr_req
user database requests, forks a process for every database
task to make it run in the background. The background process
later sends the results directly to send_ctl.

mb_ctl
mailbox control. The mailbox keeps messages in a file system,
header information is stored in the database.

usr_ctl
user administration (logins, logouts, logbook).

usc_mng
manages external user commands and command extensions.

iu_com
inter user communication (talk, conference).

send_ctl
transmit spooling, handling priorities.

icl_com
inter node communication (processing and generating PCxx
messages).

clx_ctl
system administration, installing shared memory pages.

int_com
manages internal program communications.

o The following is the only application program which can be run
on the console:
loc_usr
allows console operator(s) to log in like a normal user.

Future enhance planned are:

o A console monitor to watch ongoing activities

o Speed optimization

o An internal clx protocol

o An additional command shell for experienced users

Where and How to obtain it:
ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/Linux/cluster>

There are five files that make up the package:

o 00Index

o clx_200.tgz

o install.clx

o README

Licensing/Copyright
clx (c) by Franta Bendl (DJ0ZY) and is available for non-commercial use, but the authors want to keep track of who is using their product, so before you can actually use the software you have to ask for an encrypted callsign string to be placed in the configuration file. You must send mail to <clx_us@dl6rai.muc.de> to organise this.

Contributed by:
Bernhard ("Ben") Buettner, DL6RAI

5.7. Single floppy disk AX.25 router.

Author
Alan Cox, GW4PTS, iialan@iifeak.swan.ac.uk

Description
A single floppy disk version of linux with enough software to allow a PC to act as an AX.25/IP router.

Status
Development, not yet released.

System requirements.
As for any Linux system a 386SX class PC or better.

Detail
No detail yet.

Where and How to obtain it.
Not yet available.

Licensing/Copyright
Unknown/Undecided.

5.8. TNT.

Author
Mark Wahl, DL4YBG, DL4YBG @ DB0BLO.#.DEU.EU, wahlm@zelator.de

Description
A Hostmode terminal program for TNC's that support the WA8DED hostmode protocol.

Status
Version 0.8 is reportedly stable.

System requirements
TNC supporting WA8DED hostmode protocol, serial line.

Detail
TNT is a full featured hostmode terminal program. Compiling it on Linux is as difficult as untarring the source and typing

`make'. It provides both a `dumb' terminal and X11 version. It comes with some comprehensive documentation which describes its features in some detail. Its main features are:

Multiple sessions:
TNT supports multiple packet radio connections on virtual screens that you can switch between. Each session window provides split screen (seperate transmit and receive text) operation with a status line. Commands can be entered in either a command session, or in any terminal session using a command key. Each of the virtual screens can be larger than the physical screen and can be scrolled around.

Data capture, file transfer and logging:
A number of options are available for logging received text to files. You can log transmit, receive or both to a log file. You can overwrite or append received data to existing files. You can use the `autobin' protocol to transmit or receive binary files.

Remote Shell operation:
You can provide a shell to remote users so that they can access other programs on your computer. You can also run a program and direct its input/output to a channel so that users can use it.

Redirection of devices to a channel:
TNT allows you to redirect input/output from a channel to a device, a modem for example.

Umlaut conversion:
TNT provides umlaut conversion if necessary.

Remote mode:
Remote users can issue command themselves if allowed to do so.

Socket mode:
You can configure tnt so that it opens a socket for users to telnet to that allows them operation just as you have from the console. This is useful where your linux machine is on an ethernet and you want other terminal on the net to have use of your radio.

Where and How to obtain it.
The software is available by anonymous ftp from: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/tntsrc09.tgz>. This site is mirrored at a number of places so you will probably find it at other places as well.

Licensing/Copyright
GNU Public License. Freely redistributable, no warranty.

Contributed by:
Steffen Weinreich, DL5ZBG.

5.9. IPIP encapsulation daemon.

Name
Mike Westerhof's IPIP encapsulation daemon.

Author
Mike Westerhof KA9WSB (original code), then Bdale Garbee N3EUA (port to BSD), then Ron Atkinson N8FOW and John Paul Morrison (port to Linux), then Bdale rolled it all back together again.

Description
A daemon that will allow you to use your linux machine as an IPIP encapsulating gateway.

Status
Ron is running this code himself, and the other version have been run quite successfully.

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
If you've ever used an internet gateway from your amateur packet radio you have probably been connected by an encapsulation gateway of some descpription. Most run KA9Q's NOS and DOS, but others run Unix and this daemon. It allows you to encapsulate IP within IP, so that you can 'tunnel' IP connections over the Internet. The software allows you to connect a KISS TNC to your linux machine and to have all datagrams received on it carried across the Internet to a similar gateway. Bdale has installation instructions in the package.

Where and How to obtain it.
This software is available from the col.hp.com <ftp:///col.hp.com/hamradio/packet/etc/ipip/ipip.tar.gz> ftp site.

Licensing/Copyright etc.
Freely distributable, though Bdale asks that if you use the code and like it you might send him a QSL card or a postcard.

Contributed by:
Ron Atkinson, N8FOW, and Bdale Garbee, N3EUA

5.10. AXIP encapsulation daemon.

Name
Mike Westerhof's AXIP encapsulation daemon.

Author
Mike Westerhof KA9WSB, ported to Linux by Ron Atkinson N8FOW.
Description

A daemon that will allow you to use your linux machine as an
AXIP encapsul ating gateway.

Status
Not properly tested, but assumed to work ok.

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
This daemon is the partner to the IPIP encapsulation daemon. It
allows you to encapsulate AX.25 frames in IP to carry them
across the Internet. This is useful for linking AX.25 networks
in remote areas. Ron has supplied a Makefile for linux, and with
it the software compiled without errors on my system running a
recent version kernel. Ron has also written some README files
which give you the detail necessary to compile the system and
the original documentation describes how to configure it.

Where and How to obtain it.
This software is available in the sunsite.unc.edu ham apps
directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ax25ip.tar.gz>.

Licensing/Copyright etc.
Freely distributable so long as the original copyright notice is
not removed.

Contributed by:
Ron Atkinson, N8FOW

5.11. Ping-Pong Convers Server

Name
Fred Baumgartens Convers Server for Linux.

Author
Fred Baumgarten, DC6IQ, <dc6iq@insu1.etec.uni-karlsruhe.de>

Description
This is a version of the convers server that allows multiple
users to simultaneously chat with each other in a round-table
style conversation. It is compatible with the NOS convers
servers, but provides extra facilities such as saving/restoring
of Personal Text and Chanel Topics.

Status
In use of a number of popular convers servers, appears very
stable.

System requirements.
Linux, GNU make, C compiler.

Detail.
Complete installation instructions are included in the INSTALL
file that is included in the distribution.

Where and How to obtain it.
A distribution of this software is available at sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/convers/>. The home of
the software is at insu1.etec.uni-karlsruhe.de ftp server
<ftp://insu1.etec.uni-karlsruhe.de/pub/hamradio/convers/convers>

Licensing/Copyright etc.
Presumably copyright Fred Baumgarten (not specifically stated),
but some portions appear to be free for non-commercial use and
copying provided the copyright notices stay intact.

5.12. AX.25 digipeater for Linux

Name
axdigi

Author
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

Description
Allows Linux to digipeat across different ax.25 ports

Status
Beta release

System requirements
Requires Alan Cox AX.25 kernel support

Detail.
Allows frames to come in one port and out another using normal
ax.25 digipeater methods. Changes the digipeater callsign to
the correct one for the correct return port.

Where and How to obtain it.
sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/axdigi.tgz>
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/axdigi.tgz>

Licensing/Copyright etc.
GNU GPL

Contributed by:
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

5.13. Gracilis PacketTwin kernel driver

Name
Gracilis PacketTwin kernel driver

Author
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

Description
Device driver for Gracilis PackeTwin cards.

Status
Alpha - needs testing and bug reports.

System requirements.
Gracilis PackeTwin card, Linux AX.25 kernel software.

Detail.
Provides kernel based driver support for the Gracilis PackeTwin card using the kernel AX.25 code.

Where and How to obtain it.
The current version can be obtained from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/pt-driver-0.04.tgz>

Licensing/Copyright etc.
GNU GPL.

Contributed by:
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

5.14. RSPF Daemon

Name
RSPF - Radio Shortest Path First routing daemon for Linux

Author
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

Description
An implementation of the Radio Shortest path First routing protocol for linux. The daemon supports version 2.2 of the protocol which corrects a lot of bugs and problems that were present in version 2.1.

Status
Alpha - running, needs testing and bug reports. Current version is 0.05

System requirements.
Requires Alan Cox's kernel based AX.25 code.

Detail
This program will allow Linux to become an RSPF router. It addresses some of the quirks of RSPF v2.1, the version in NOS which means that it is incompatible with the NOS version. It will also allows remote/local queries via a tcp session for debugging and diagnostic purposes.

Where and How to obtain it.
Current versions are always available from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or from the author.

Licensing/Copyright
Will be covered by the GPL when formally released.

5.15. Z8530 SCC driver.

Name
generic Z8530 SCC device driver.

Author
Joerg Reuter, <DL1BKE@melaten.ihf.rwth-aachen.de>

Description
A device driver to allow you to use a range of 8530 based SCC
cards under Linux.

Status
stable

System requirements.
a modern Linux kernel

Detail
The Zilog Z8530 SCC provides Synchronous/Asynchronous, HDLC,
NRZI encoding and other capabilities. There are a number of
peripheral cards that use the Z850 as the basis of their design.
The driver is generic enough to be pushed into service for just
about any sort of 8530 card. The README file that comes with the
package provides detail on installation and configuration.

Where and How to obtain it:
The driver can be obtained from: ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/z8530drv-1.8.dl1bke.tar.gz>
for kernel versions older than 1.3.*. Kernel version 1.3.*
supports the driver in the standard distribution.

Licensing/Copyright
GNU Public License.

5.16. Multidrop kiss program.

Name
mkiss

Author
Kevin Uhlir, <kevinu@cricket.vware.mn.org>

Description
a program that will allow you to make use of the feature of
multidrop kiss mode tncs.

Status
stable, released.

System requirements.
A modern linux kernel and AX.25 kernel support.

Detail
The existing KISS support in the linux kernel is designed for simple single channel KISS TNC's. A number of TNC's support what is called multidrop mode where a single TNC may support a number of modems, each being controllable via an individual KISS port across the same serial interface. Kevin has overcome the lack of multidrop support by writing a program that takes two seperate kiss feeds from the kernel and combining them into a single multidrop feed which it passes to the tnc. The reverse process also takes place where it splits the single multidrop feed into the appropriate individuals feeds.

Instructions on how to compile, install and use the software come in the package.

Where and How to obtain it:
The program is available from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/mkiss-1.0.tgz>.

Licensing/Copyright
GNU GPL

Kevin Uhlir, <kevinu@cricket.vware.mn.org>

6. Morse Code

Software for use in conjunction with, or for facilitating Morse communication.

6.1. GW4PTS Morse trainer.

Author
Alan Cox, GW4PTS, iialan@iifeak.swan.ac.uk

Description
A Morse Code trainer that uses the PC internal speaker

Status
stable, works quite well, unfinished.

System requirements
Linux, any version

Detail
Alan wrote this small program in only an hour. It is quite neat, and allows you to play morse at a range of speeds and frequencies through the PC internal speaker. You can specify the text to be played either from the command line, from a file, or the program is capable of generating random character groups. As it stands you must invoke the program from a Linux Virtual Console, as it relies on certain kernel calls to produce the

sound, and these don't work as easily from an XTerm. As it sounds each character it lists the character in verbal form (Di, Dit, Dah etc.) to the screen. Alan is hoping that someone will take the code and enhance it with the features he has listed in the comments at the head of the source file.

Where and How to obtain it.
I've had a large number of responses from people seeking this code, so I've obtained Alan's permission to make it available. You can obtain it from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/GW4PTS.morse.tar.gz>.

Copyright/Licensing
GNU Public License 2, freely redistributable, no warranty.

6.2. morse (aka superiormorse)

Author
Joe Dellinger, Hawaii Institute of Geophysics, University of Hawaii at Manoa, joe@sep.stanford.edu, jdellinger@trc.amoco.com, joe@soest.hawaii.edu

Description
A morse-code practice program for UNIX workstations.

Status
Quite stable

System Requirements
Currently supports X11, Sun4, HP, Indigo, and Linux

Detail
Lots of features and options. Includes a utility for generating random content QSOs, similar to those used in the FCC exams.

Where and How to obtain it:
morse can be obtained from: sepftp.standford.edu <ftp://sepftp.stanford.edu/pub/UNIX_utils/morse/morse.tar.gz>.

Licensing/Copyright
Freely Redistributable

Contributed by:
Brian Suggs, AC6GV, and John Gotts, jgotts@engin.umich.edu

7. AMTOR Software.

Software for use in conjunction with, or for facilitating AMTOR.

8. PACTOR Software.

Software for use in conjunction with, or for facilitating PACTOR.

9. Slow Scan Television Software.

Software for use in conjunction with, or for facilitating Slow Scan Television.

10. Facsimile Software.

Software for use in conjunction with, or for facilitating Facsimile.

11. Design and Construction Software.

Software to assist in the design and construction of amateur radio related things. Antenna, Circuit Board, Filter, and QSL card design packages are all good candidates for this section.

11.1. Software Oscilloscope

Author
Jeff Tranter, Jeff_Tranter@Mitel.COM

Description
Scope is a simple software emulation of an oscilloscope. It graphically displays voltage as a function of time.

Status
ALPHA. First release.

System requirements
Sound card with input capability supported by the kernel sound driver. SVGALIB is used to do the display work.

Detail
Scope uses the /dev/dsp device to take audio in from the soundcard and displays it on the screen in a manner similar to an oscilloscope. Jeff claims Scope was written more for amusement value than for any serious purpose.

Where and How to obtain it.
You can obtain source, makefile and man page for Scope from:
sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/scope-0.1.tar.gz>

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

11.2. Printed Circuit Board design tool.

Author
Thomas Nau, <Thomas.Nau@rz.uni-ulm.de>

Description
An X11 based interactive printed circuit board design tool.

Status
Vers 1.3, stable.

System requirements
X11 Windowing system and a recent flex program.

Detail
The pcb package comes with good instructions on how to compile and install the software. I compiled it without error under X11R6. It comes with package layouts for a range of popular components and the example layout nicely demonstrates the capabilities of the package.

Where and How to obtain it.
You can obtain the pcb package from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/pcb-1.3.tar.gz> or from: ftp.medizin.uni-ulm.de <ftp://ftp.medizin.uni-ulm.de/pub/pcb-1.3/pcb-1.3.tar.gz>

Licensing/Copyright
GNU Public License

11.3. Chipmunk circuit design and simulation tool

Author
Dave Gillespie <daveg@synaptics.com> and John Lazzaro <lazzaro@cs.berkeley.edu>

Description
Schematic Entry and Digital or Analog Simulation.

Status
vers 5.10, stable.

System requirements
X11 windowing system and older (XFree86-2.x) libs, 8 bpp (256 color) only

Detail
I haven't tried this one out yet.

Where and How to obtain it.
You can obtain the Chipmunk package from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits>or ifi.uio.no <ftp://ifi.uio.no/pub/>.

Licensing/Copyright
Modified GNU Public License, Caltech specifically disclaimed from liability.
11.4. irsim

Author
Dmitry Teytelman, dim@leland.stanford.edu

Description
An event-driven logic-level simulator for MOS circuits

Status
Version 9.2, production.

System Requirements
X-Windows.

Detail
irsim is an X11 based simulator for MOS circuits. It has two simulation modes, either switch where each transistor is modelled as a voltage controlled switch, or linear where each transistor is modelled as a resistor in series with a voltage controlled switch, and each node has a capacitance.

Where and How to obtain it.
You can obtain irsim from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/irsim-9.2.linux.1.tar.gz>.

Licensing/Copyright
Freely Redistributable

11.5. Spice vers. 3f4

Author
University of California, Berkeley, port by Jeff@RyeHam.EE.Ryerson.Ca

Description
Spice is an analog circuit emulator.

Status
Stable release.

System requirements
Unknown.

Detail
Spice allows you to design and test circuits in a computer modelled environment to see how they will behave without having to touch a soldering iron, or solder. A readme file comes with the package. To install I did the following:

```
# cd /usr/src
# gzip -dc spice3f4.tar.gz | tar xvf -
# cd spice3f4
# ./utils/build linux
# ./utils/build linux install
```

Where and How to obtain it.
You can obtain version 3f4 of Spice from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/spice3f4.tar.gz>
Licensing/Copyright
Copyright held by University California, Berkeley. Freely redistributable provided you are not unfriendly to the U.S.

11.6. svgafft - Spectrum analyser

Author
Andrew Veliath, drewvel@ayrton.eideti.com

Description
svgafft is a spectrum analyser for Linux.

Status
Alpha software, but usable.

System requirements
F77, Linux supported sound card, svgalib, a 486DX33 or better.

Detail
svgafft uses the /dev/dsp device and currently supports 16-bit
and 8-bit sample resolution on supported Linux soundcards. It's
display is something akin to a high-end spectrum analyzer with
falling peaks.

Where and How to obtain it:
You can find the software at sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/sound/svgafft-0.2c.tar.gz>.

Licensing/Copyright
GNU Public License.

11.7. Audio Spectrum Analyser

Author
Philip VanBaren, phillipv@eecs.umich.edu

Description
An audio spectrum analyser for Linux SVGALIB or X-Windows.

Status
Alpha but usable

System requirements
Linux supported sound card, svgalib or X-Windows.

Detail
freq5a1 uses the /dev/dsp device, samples the incoming audio,
performs a fast fourier transform on the data and displays the
output in either 640x480 VGA or an X-Window.

Where and How to obtain it:
You can obtain freq5a1.tar.gz from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/sound/freq5a1.tar.gz> or
by mail from the author.

Licensing/Copyright
GNU Public License vers 2.0.

12. Training/Educational Software.

Software to assist in education or training for amateur radio. Morse
Code tutorials, technical examination database, Computer Based
Training software, and the like are listed here.

13. Miscellaneous Software.

Software that didn't neatly fit into any other category.

13.1. Linux for HAMS CD-ROM

Author
Bruce Perens, bruce@pixar.com

Description
A complete linux distribution on CDROM specifically designed for
Amateur Radio operators.

Status
Not yet available.

System requirements.
Linux compatible hardware, some software will obviously require
specialised hardware to operate. No additional software should
be required.

Detail
A complete Linux distribution specifically catering for Amateur
Radio operators. It will include a fully featured Linux
installationplus a range of amateur radio specific software such
as those listed in this document. Bruce has detail and updated
status report available at the LinuxForHams WWW page
<http://www.rahul.net/perens/LinuxForHams>.

Where and how to obtain it:
It isn't yet available, details will be made available when it
is released.

Licensing/Copyright
GNU Public License.

13.2. SunClock

Author
John Mackin, john@cs.su.oz.AU

Description
A clock that will show you instantly what parts of the globe are
exposed by sunlight and what parts aren't.

Status
Released.

System requirements.
X-Windows.

Detail
sunclock is another of those desktop gadgets that most people
think look nice but really don't have a lot of use for. I use
sunclock to obtain an at-a-glance indication of the time
anywhere in the world. In its iconic form it sits in a small
Mercator projection. When maximised it produces the same image
but obviously larger with slightly more detail. It also
displays the date, local time and UTC. sunclock actually
calculates mathematically what parts of globe are sunlit and
which aren't, it seems quite accurate, so long as you assume the
earth has no atmosphere.

Where and How to obtain it.
I haven't seen any precompiled sunclock binaries for Linux
about, so check your nearest archie server. sunclock compiled
straight out of the box for me.

Licensing/Copyright
Public Domain and may be freely copied as long as the notices at

the top of sunclock.c remain intact.

13.3. Xearth

Author
Kirk Johnson, <tuna@cag.lcs.mit.edu>

Description
A rotating earth for X-windows root window. It has real life shading, and options for geostatic view, and non geostatic view. A prettier and more modern version of sunclock but requires a bit more processing power.

Status
Version 1.0.

System requirements.
X-Windows.

Detail
xearth is a sophisticated program which draws a colour picture of the earth onto your X Windows display. It offers either an orthographic view as you would see from space or the map like mercator projection. You have a number of options in determining the behaviour of the view. The details are available from the xearth Home Page <http://cag-www.lcs.mit.edu/~tuna/xearth/> and in the documentation which is supplied with the package.

Where and How to obtain it.
The source can be obtained from its home site at cag.lcs.mit.edu <ftp://cag.lcs.mit.edu/pub/tuna/> or just about any X11/contrib directory.

Licensing/Copyright
Copyright (C) 1989, 1990, 1993 by Kirk Lauritz Johnson. The copyright notice included states that xearth is freely redistributable so long as the copyright notice is left intact, and be included in documentation.

Contributed by:
Kirk Johnson" <tuna@kanchenjunga.lcs.mit.edu>

14. Installation, Configuration, Hints and Tricks.

This section provides some detail on how to actually install and use some of the listed software. It will also detail some solutions to some tricky problems that you might encounter with the software.

14.1. AX.25/NetRom - Packet Radio protocol software.

The AX.25 protocol offers both connected and connectionless modes of operation, and is used either by itself for point-point links, or to carry other protocols such as tcp/ip and netrom.

It is similar to X.25 level 2 in structure, with some extensions to make it more useful in the amateur radio environment.

The NetRom protocol is an attempt at a full network protocol and uses AX.25 at its lowest layer as a datalink protocol. It provides a network layer that is an adapted form of AX.25.

Alan Cox developed some early kernel based AX.25 software support for Linux. Jonathon Naylor <g4klx@g4klx.demon.co.uk> has taken up ongoing development of the code, has added NetRom support and this is available in ALPHA form for you to experiment with. The Linux code supports KISS based TNC's (Terminal Node Controllers), the Ottawa PI card and the Z8530 SCC driver. Any bug reports relating to the AX.25 or Netrom software should now go to Jonathon.

The User programs contain a simple PMS (Personal Message System), a beacon facility, a line mode connect program, `listen' an example of how to capture all AX.25 frames at raw interface level and programs to configure the Netrom protocol. Included also are an AX.25 server style program to handle and despatch incoming AX.25 connections and a NetRom daemon which does most of the hard work for NetRom support.

14.1.1. Where to obtain the AX.25/Netrom software.

The AX.25 software is comprised of two components, the kernel source and the utility programs. As of the version 1.3.* release of Linux kernel source the AX.25, Netrom, Z8530 SCC and PI card drivers are all included as a standard. I recommend you obtain and use the version 1.3.* kernel source. There are three reasons I'm recommending you use the alpha version software and they are:

o it makes the process of building and configuring the software a whole lot simpler. There are no patches to apply it is a simple matter of configuring and compiling a kernel with the appropriate options enabled.

o it is the most recent software and is most likely to provide the most satisfactory results.

o like all new software, it needs testing and bug reports. The more people that take the software and attempt to use it in their own configurations the more likely it will be that bugs are uncovered and the easier it will be to get the software debugged. Join the team, contribute bug reports and help everybody.

Be warned though, this software is alpha and may have problem that you wouldn't otherwise encounter. Please take all the usual precautions and be sure to keep a working kernel as backup when testing new kernels. It is wise to test a new kernel by booting from it from floppy before actually installing it with lilo, though I haven't bothered for about 90 kernels revisions so I'm fairly confident you can pretty safely run with alpha kernels.
You can obtain the latest kernel source from:

ftp.funet.fi

/pub/OS/Linux/PEOPLE/Linus/v1.3/

You will also need the utility programs. The latest version of those can be found at:

sunsite.unc.edu

/pub/Linux/apps/ham/ax25-utils-1.3.30.tar.gz

or:

ftp.ucsd.edu

/hamradio/packet/tcpip/incoming/ax25-utils-1.3.30.tar.gz

14.1.2. Installing the AX.25 software.

The software comes in two parts, the kernel source, and the user programs.

14.1.2.1. The kernel source.

If you are using the 1.3.* kernel source then all you have to do is build the kernel as you would normally.

The following should be safe:

```
# cd /usr/src/linux
# make config
# make dep;make
```

o Be sure to answer `yes' when you are asked if you should include the AX.25 support in the make config step.

o You will also need to answer `y' to including SLIP if you want the AX.25 code to support a KISS TNC or if you intend running a version of NOS on your system and you wish to be able to link it with the rest of your system.

o You will be asked if you wish to include the Z8530 driver.

o If you wish to support the Ottawa PI driver then you must answer `y' when asked: Do you want to be offered ALPHA test drivers ?

and: Other ISA cards ?

then `y' when prompted:

Ottawa PI and PI/2 support.

14.1.2.2. The user programs.

To install the user programs you should try:

```
# cd /usr/local
# gzip -dc ax25-utils-1.3.30.tar.gz | tar xvvof -
```

```
# cd ax25-utils-1.3.30
... if you are using a.out binaries:
# install.sh a.out
... if you want to install ELF binaries:
# install.sh ELF
```

If you want to compile your own binaries then you should do the following:

```
# cd src
# make clean
# make install
```

14.1.3. Configuring an AX.25 connected mode interface.

Configuring an AX.25 port is very similar to configuring a slip device. The AX.25 software has been designed to work with a TNC in kiss mode or an Ottawa PI2 card. You will need to have the TNC preconfigured and connected to your serial port. You can use a comms program like minicom or seyon to configure the TNC into kiss mode if you wish.

You use the axattach program in much the same way as you would use the slattach program (refer to the NET-2-HOWTO for more information on slattach and the other network software for Linux). For example:

```
# /usr/local/sbin/axattach -s 4800 /dev/ttyS1 VK2KTJ-1 &
# sleep 2
```

would configure your /dev/ttyS1 serial device to be a kiss interface at 4800 bps, with the hardware address VK2KTJ. The sleep of 2 seconds is necessary just to give the kernel a little time to do some housekeeping that it has to do before you try and change the interface.

You can use the axsetcall command to change the callsign of an AX.25 interface after it has been created if you wish.

All this step has done is to actually activate the device in the kernel, you need to run other programs before you an actually make use of the port. The AX.25 ports have a configuration file that can be read by any program that wants to use AX.25 to find information about the port. This file is called the:

/usr/local/etc/axports

file. The format of the file is as follows:

callsign baudrate window label

where:

callsign
is the AX.25 callsign you want to assign to the port.

baudrate
is the speed at which you wish the port to communicate with your TNC.

window
is the AX.25 window (K) parameter. This is the same as the MAXFRAME setting of many tnc's.

label
is a name for the port.

In my case, mine looks like:

VK2KTJ-1 4800 1 radio

At this stage not all of this information is used, it will be picked up and used in later developments. You now should be able to make outgoing AX.25 connections. To test AX.25 connected mode you could use something similar to the following:

/usr/local/bin/call VK2DAY via VK2RVT

The call program is a linemode terminal program for making AX.25 calls. It recognises lines that start with ` ' as command lines. The ` .' command will close the connection.

Please refer to the man pages in /usr/local/man and the README file in ax25-utils-1.3.30 distribution for more information.

14.1.4. Configuring Linux to accept Incoming AX.25 connections.

Linux is a powerful operating system and offers a great deal of flexibility in how it is configured. With this flexibility comes a cost in configuring it to do what you want. When configuring your Linux machine to accept incoming AX.25 connections there are a number of questions you need to ask yourself. The most important of which is: "What do I want users to see when they connect?". As detailed in the software list at the start of this document there are BBS systems that are being developed that you might want users to see when they connect, alternatively you might want to give users a login prompt so that they can make use of a shell account, or you might even have written your own program, such as a customised database or a game, that you want people to connect to. Whatever you choose, you must tell the AX.25 software about this so that it knows what software to run when it accepts an incoming AX.25 connection.

You do this within the /usr/local/etc/ax25d.conf. This file is the configuration file for the ax25d AX.25 daemon which handles incoming AX.25 connections.

The file is a little cryptic looking at first, but you'll soon discover it is very simple in practise, with a small trap for you to be wary of.

The format of the ax25d.conf file is as follows:

```
# This is a comment and is ignored by the ax25d program.
[<interface_call>]
<peer1> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer2> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
defaults window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer3> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
default window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
```

Where:

at the start of a line marks a commment and is completely ignored by the ax25d program.

<interface_call>
is the AX.25 callsign of the interface that this particular paragraph is for.

<peer>
is the callsign of the peer node that this particular configuration applies to. If you don't specify an SSID here then any SSID will match.

window
is the AX.25 Windows parameter (K) or MAXFRAME parameter for this configuration.

T1 is the Frame retransmission (T1) timer in half second units.

T2 is the amount of time the AX.25 software will wait for another incoming frame before preparing a response in 1 second units.

T3 is the amount of time of inactivity before the AX.25 software will disconnect the session in 1 second units.

N2 is the number of consecutive retransmissions that will occur before the connection is closed.

<mode>
provides a mechanism for determining certain types of general permissions. The modes are enabled or disabled by setting or resetting bits in an 8 bit map. You set that map by setting <mode> to the sum of the following values:

1 Setup utmp, and run on a ptty (planned).

2 UNUSED.

4 UNUSED.

8 UNUSED.

16 UNUSED.

32 UNUSED.

64 Disallow digipeated uplinks, only allow direct connections.

128
Lockout, Barred, immediate disconnect.

<uid>
is the userid that the program to be run to support the
connection should be run as.

<cmd>
is the full pathname of the command to be run, with no arguments
specified.

<cmd-name>
is the text that should appear in a ps as the command name
running (normally the same as <cmd> except without the directory
path information.

<arguments>
are the command line argument to be passed to the <:cmd> when it
is run. You pass useful information into these arguments by use
of the following tokens:

%U AX.25 callsign of the connected party without the SSID, in
uppercase.

%u AX.25 callsign of the connected party without the SSID, in
lowercase.

%S AX.25 callsign of the connected party with the SSID, in
uppercase.

%s AX.25 callsign of the connected party with the SSID, in
lowercase.

You need one section in the above format for each AX.25 interface you
want to accept incoming AX.25 connections on.
There are two special lines in the paragraph, one starts with the
string `defaults' and other starts with the string `default' (yes
there is a difference). These lines serve special functions.

The `default' lines purpose should be obvious, this line acts as a
catch-all, so that any incoming connection on the <interface_call>
interface that doesn't have a specific rule will match the `default'
rule. If you don't have a `default' rule, then any connections not
matching any specific rule will be disconnected immediately without
notice.

The `defaults' line is a little more subtle, and here is the trap I
mentioned earlier. In any of the fields for any definition for a peer
you can use the `*' character to say `use the default value'. The
`default' line is what sets those default values. The kernel software
itself has some defaults which will be used if you don't specify any.
The trap is that the these defaults apply only to those rules below
the `default' line not to those above. You may have more than one
`default' rule per interface definition, and in this way you may
create groups of default configurations.

Ok, an illustrative example:

```
# ax25d.conf for VK2KTJ - 21/11/95
# This configuration uses the AX.25 port defined earlier.
[VK2KTJ-1]
NOCALL * * * * * 0 guest /usr/games/fortune
defaults 1 10 * * * 0 root /bin/login ax25login
VK2XLZ-1 * * * * * * * * *
VK2DAY-1 * * * * * * * * *
default 1 10 5 100 5 0 root /usr/local/bin/bbs bbs %u
#
```

This example says that anybody to the interface on my machine with the callsign VK2KTJ-1 will have the following rules applied:

Anyone whose callsign is set to `NOCALL' should use the kernel default parameters and have the fortune program run as guest for them.

The defaults line changes two parameters from the kernel defaults (Window and T1) and will run the /bin/login login program for them. Any copies of login run this way will appear as ax25login in a ps listing so that you can easily distinguish AX.25 logins from others. Following are definitions for two stations who will receive those permissions.

The last line in the paragraph is the catch all definition that everybody else will get (including VK2XLZ and VK2DAY using any other SSID other than -1). This definition sets all of the parameters implicitly and will cause the bbs program to run with a command line argument of the callsign of the connecting peer in lower case with no SSID.

If you wanted to define rules for another interface, even a Netrom interface, then you would add another paragraph coded in the same way with rules and callsign appropriate to it.

This example is a contrived one but I think it illustrates clearly the important features of the syntax of the configuration file. Jonathon includes a much longer and more detailed example in the ax25-utils package.

14.1.5. Configuring an AX.25 interface for tcp/ip.

If you want to carry tcp/ip over the AX.25 port you have configured, all you need to do is use the ifconfig program to configure the ip address and netmask details for the port and add a route via the port.

```
# /sbin/ifconfig sl0 44.136.8.5
# /sbin/ifconfig sl0 netmask 255.255.255.0
# /sbin/ifconfig sl0 broadcast 44.136.8.255
# /sbin/ifconfig sl0 arp mtu 256 up
# /sbin/route add -net 44.136.8.0 sl0
# /sbin/route add default sl0
```

The commands listed above are typical of the sort of configuration many of you would be familiar with if you have used NOS or any of its derivatives or any other tcp/ip software. Note the default route might not be required if you have some other network device conifgured.

To test it out, try a ping or a telnet to a local host.

14.1.6. Configuring an AX.25 interface for Netrom.

To configure Netrom for an AX.25 interface you must configure two files.

The first is the /usr/local/etc/nrports file. This file describes the Netrom port.

This file is formatted as follows:

callsign alias description

Where:

callsign
is the callsign that the Netrom traffic from this port will use.

alias
is the Netrom alias this port will have assigned to it.

description
is a free text description of the port.

An example would look something like the following:

VK2KTJ MTCOLAH Netrom Switch Port

Note again that the first line refers to the first Netrom interface, the second line refers to the second Netrom interface and so on.

The second file is the /usr/local/etc/nrbroadcast file.

This file is formatted as follows:

port min_obs def_qual worst_qual verbose

Where:

port
is the port number obtained from the /usr/local/etc/axports file. The first line in the file describes AX.25 port number one, the second describes port number two etc. If you do not have an entry in /usr/local/etc/nrbroadcasts for a port then this means that no Netrom routing will occur and any received Netrom broadcasts will be ignored for that port.

min_obs
is the minimum obselesence value for the port.

def_qual
is the default quality for the port.

worst_qual
is the worst quality value for the port, any routes under this
quality will be ignored.

verbose
is a flag determining whether full Netrom routing broadcasts
will occur from this port or only a routing broadcast
advertising the node itself.

An example would look something like the following:

```
1 1 200 10 1
2 1 200 10 1
```

14.2. Ottawa PI/PI2 card driver.

The Ottawa PI card is a Z8530 SCC based card for IBM PC type machines that is in common usage by Amateur Radio operators worldwide. While it is most commonly used by Amateur Radio Operators, it could be pressed into service in other fields where it is desirable to have the features of a Z8530. It supports a high speed half duplex (single DMA channel) port, and a low speed (<9k6bps interrupt driven) half duplex port. The PI2 is a new version of the card that supports an on board radio modem, and improved hardware design.

A driver for this card has been written by David Perry, <dp@hydra.carleton.edu>, and is available from in the standard linux kernel. Please refer to the AX.25 section above for details on how to configure the kernel to include the PI card driver.

Once you have the PI card driver configured into your kernel then you should reboot and when you do you should see mention of the PI card driver in the messages that appear on the screen while the kernel is booting. The kernel tests each of the I/O port addresses that a PI card might be configured for and reports any that it finds. You should then look at the /proc/net/dev file and you should see reference to devices called pi0a and pi0b etc.

If you don't then recheck that you have configured and compiled your kernel correctly and that you are in fact actually running your new kernel. If you still don't then this suggests that your PI card was not detected by the kernel while it is booting and may indicate that you have some sort of hardware conflicting with your PI card that prevented it being detected.

If all of the above went as planned then you will need to configure your PI card for IP. The configuration of the PI card is virutally identical to that of any other IP interface. Something like the following should work ok for you:

```
# /sbin/ifconfig pi0a 44.136.8.5
# /sbin/ifconfig pi0a netmask 255.255.255.0
```

```
# /sbin/ifconfig pi0a broadcast 44.136.8.255
# /sbin/ifconfig pia arp mtu 256 up
# /sbin/route add -net 44.136.8.0 pi0a
# /sbin/route add default pi0a
```

Note that pi0a refers to the `a' port on the first PI card found, and that pi0b would therefore refer to the `b' port on the first PI card found etc.

As usual, when this has been done you can test the interface with the ping or telnet command to ensure it is working.

14.3. HOWTO link NOS and the Linux kernel networking software

Many people like to run some version of NOS under Linux because it has all of the features and facilities they are used to. Most of those people would also like to have the NOS running on their machine capable of talking to the Linux kernel so that they can offer some of the linux capabilities to radio users. Brandon S. Allbery, KF8NH, contributed information to explain how to achieve this.

Since both Linux and NOS support the slip protocol it is possible to link the two together by creating a slip link. You could do this by using two serial ports with a loopback cable between them, but this would be slow and costly. Linux provides a feature that many other unix-like operating systems provide called `pipes'. These are special pseudo devices that look like a standard tty device to software but in fact loopback to another pipe device. To use these pipes the first program must open the master end of the pipe, and the open then the second program can open the slave end of the pipe. When both ends are open the programs can communicate with each other simply by writing characters to the pipes in the way they would if they were terminal devices.

To use this feature to connect the Linux Kernel and a copy of NOS, or some other program you first must chosoe a pipe device to use. You can find one by looking in your /dev directory. The master end of the pipes are named: ptyp[1-f] and the slave end of the pipes are known as: ttyp[1-f]. Remember they come in pairs, so if you select /dev/ptypf as your master end then you must use /dev/ttypf as the slave end.
Once you have chosen a pipe device pair to use you should allocate the master end to you linux kernel and the slave end to the NOS program, as the Linux kernel starts first and the master end of the pipe must be opened first. You must also remember that your Linux kernel must have a different IP address to your NOS, so you will need to allocate a unique address for it if you haven't already.

You configure the pipe just as if it were a serial device, so to create the slip link from your linux kernel you can use commands similar to the following:

```
# /sbin/slattach -s 38400 -p slip /dev/ptypf &
# /sbin/ifconfig sl0 broadcast 44.255.255.255 pointopoint 44.70.248.67 /
mtu 1536 44.70.4.88
# /sbin/route add 44.70.248.67 sl0
# /sbin/route add -net 44.0.0.0 gw 44.70.248.67
```

In this example the Linux kernel has been given IP address 44.70.4.88 and the NOS program is using IP address 44.70.248.67. The route command in the last line simply tells your linux kernel to route all datagrams for the amprnet via the slip link created by the slattach command. Normally you would put these commands into your /etc/rc.d/rc.inet2 file after all your other network configuration is complete so that the slip link is created automatically when you reboot. Note: there is no advantage in using cslip instead of slip as it actually reduces performance because the link is only a virtual one and occurs fast enough that having to compress the headers first takes longer than transmitting the uncompressed datagram.

To configure the NOS end of the link you could try the following:

```
# you can call the interface anything you want; I use "linux" for convenience.
attach asy ttypf - slip linux 1024 1024 38400
route addprivate 44.70.4.88 linux
```

These commands will create a slip port named `linux' via the slave end of the pipe device pair to your linux kernel, and a route to it to make it work. When you have started NOS you should be able to ping and telnet to your NOS from your Linux machine and vice versa. If not, double check that you have made no mistakes especially that you have the addresses configured properly and have the pipe devices around the right way.

15. How to contribute or update an entry.

I'd like for this list to be as complete and up-to-date as possible. So I'm keen to hear about any developments or products that I don't already know about, or that the entry is obselete or outdated for.

What I'd like as a minimum set of requirement would be something like the following:

Name
The name of the software in question.
Author
Who wrote, or ported the software. An email address, or some other means of contacting them is also essential.

Description
A single line description of what the software does.

Status
An indication of the software's status. Is it still in testing? Is it a production release? Is it still in the design stage?

System requirements
What does the software require to run? Does it require X-Windows? Does it need a soundcard? Does it need a certain version of kernel? Does it need other software to support it?

Detail
I'm not keen on including a large amount of detail on each piece of software as this would consume a lot of time reading and trying to keep up to date. So instead what I'd like to list is what makes this software unique, anything special about it. Perhaps its most outstanding features, that sort of thing.

Where and How to obtain it.
If the software is freely distributable then ftp details would be great. If it is commercial software then the name of the company distributing the software, and an address or telephone number. If it is available only by some other means, say mail order, then details on where and how to obtain it.

Licensing/Copyright
Is the software Copyleft? Copyright? Shareware? Public Domain? Restricted in use in any way?

Don't worry if you don't know all of these details, just send me what you do know and I'll list what I can. I'd rather have an incomplete listing than no listing at all.

Please mail any contributions to:

94004531@postoffice.csu.edu.au or terry@perf.no.itg.telecom.com.au

I'd list a packet radio address too but I'm still not properly operational again yet after moving house.

16. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio tcp/ip discussions), and you might also try the #linpeople channel on the undernet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion of the use of advanced protocols, of which tcp/ip is one, in Amateur Radio. Linux specific questions should not ordinarily go there.

17. Copyright.

The HAM-HOWTO is Copyright (c) 1995 Terry Dawson.

Permission is granted to make and distribute verbatim copies of this document provided the copyright notice and this permission notice are preserved on all copies.

Permission is granted to copy and distribute modified versions of this document under the conditions for verbatim copies above, provided a notice clearly stating that the document is a modified version is also included in the modified document.

Permission is granted to copy and distribute translations of this document into another language, under the conditions specified above for modified versions.

Permission is granted to convert this document into another media under the conditions specified above for modified versions provided the requirement to acknowledge the source document is fulfilled by inclusion of an obvious reference to the source document in the new media. Where there is any doubt as to what defines 'obvious' the copyright owner reserves the right to decide.

```
List Of Stamp Applications (L.O.S.A for short)
==============================================

If you have done something with the BASIC Stamp (big or small)
that you are willing to tell others please use the form below and
write a short description, nothing fancy is needed just a simple
explanation. If you have source code to share that's even better but
it's not necessary.

Then e-mail the form to:

cj@algonet.se

With the following as the subject:

L.O.S.A Contribution

Or you could point your Web-browser to the following URL and fill in
the L.O.S.A form on the Web-page...

http://www.algonet.se/~cj/losa.html

The latest version of L.O.S.A is going to be posted to the following
mailing lists and news groups, I will update it approx. once a month.

Mailing lists:

BASIC Stamp Mailing List

Mews groups:

comp.robotics.misc
comp.home.automation
sci.electronics
sci.electronics.misc
rec.radio.amateur.homebrew
rec.radio.amateur.misc

Hello,

I am conducting a survey for a graduate-level communication research
project at the University of Dayton. This survey concerns the
use of technology in society.

Point your web browser to this location to fill out the survey:

http://www.udayton.edu/oca/bartz/survey/

There are only 10 quick questions to answer. No fill in the blanks,
and no sentences to write. It's quick and easy and possibly even
fun! All responses will remain anonymous.

Results will be made available online when the project is finished.

Thanks for your time,
Mike

Evan, or Santa, or whatever you want to call yourself ...

I suggest that you visit news.admin.net-abuse.announce and read
a few of the postings there. After you have done that, then you
can come back here and tell Bill that he is wrong.

There is a term that is used to describe what you are crying about,
but 'spam' is not it. In fact, it might be a good exercise to see
if you can find out what the correct term is.

John

Subject: Emily Postnews explains how to spam the net
Newsgroups: alt.current-events.net-abuse,news.admin.policy

Q: Emily, how can I put out my billboard on the information superhighway?

A: The best way to do it is to perform a spam. It's called that because everybody loves it as much as the customer in the Monty Python "Spam" sketch loves his spam.

The best way to do this is to find some naive programmer and ask it to write a script that posts your message to every newsgroup. You'll start by getting as big a list of newsgroups as you can find. The members of USENET, hoping to see your ad, have prepared these lists just for you. It doesn't really matter what your product is. If people on the net might use it, they'll be happy to read about it in every group.

Now create a message promoting yourself. Be bold, be daring, and be sure to provide info on how to contact you in ways that people on the net can't shut off. (More on that later.)

Because the reaction is going to be so overwhelming, be sure to take the following steps:

a) Unlist your phone number. The networking public is going to want to contact you so much to talk about your product or service that they'll even try to call you at home. If they get your home phone or address, they'll be sure to share it with all the other people seeking to send you their admiration, and your fame may prove too much. You want business, of course, but do you want to take orders all night?

b) Get an account with some other internet account providers. For reasons not quite certain, your provider probably has a clause in their contract with you saying not to do this. Even if they don't, they will probably delete your account a few hours after you announce your product, so be sure to get other accounts under assumed names so you can follow what's going on. This is the reason that expecting E-mail replies to your ad won't work.

c) Be sure you've led a clean life. You and your product are going to become as famous as Gary Hart and O.J. Simpson! But, as you know, such fame has its downsides, as your eager fans research every tawdry episode from your past history. So be sure there are no skeletons in

your closet. (Unless your product is skeletons!) Of course, since you're no net-communist, you probably have had a clean life.

d) Due to the Brady Bill, you may want to file your firearms acquisition permit a few days in advance of your ad. Soon you're going to be rich, and you'll need to protect that wealth.

e) Load plenty of fax paper in your fax machine. Hire extra staff to load the rolls. There may be orders in all the faxes you will get.

f) Resign any memberships you may have in any professional associations you may have joined relating to your business that might have something as pesky as a code of ethics. Why put them through the trouble of handling all the calls from your adoring fans, looking for somebody to talk with about you.

Ok, now you're ready. Unleash the posting program. Have it send your message once to every group. There are thousands. Now picture in your mind the prospective customer. She starts her day, perhaps, reading a group about her hobby. And right there is your ad! The title is curious so she reads it. Your name is now inserted into her mind -- you've got mindshare. It's true your product didn't have anything to do with her hobby, but the net is there to find customers for you, not for people to share their thoughts.

Then she goes to her next group, perhaps about her brand of computer. There's your ad again! You've sneaked into the great demographics of the high-tech world. As she goes on, she sees your ad again and again. Imagine her joy as she sees your now familiar headline everywhere she goes. "Wow, they must be really big and important," she'll think. "They're as famous as IBM." Soon that joy will be so much that she'll be ready to buy, buy, buy.

Now comes the bad news. USENET is unreliable, and postings don't always work. So, for unknown reasons, a few hours after you make your postings they will all have disappeared. Normally you would just post them again, but by this time your internet mail access will have been deleted, as I said above, so you'll have to just sit back and bask in the adulation and orders. There is a theory that some people, who don't like your ad, will have a smarter program than your posting program root around the net and stamp it out, but I hardly think it's likely anybody would do that.

There will be some people annoyed, it's true. But the net has at least 10 million people on it, and you'll probably only *really* annoy perhaps 3 to 4 million of them -- a minority!

Others who have tried this have reported not only that a mere minority show displeasure, but that vast numbers of people take the time to send back inquiries and orders just so you can have more to read. Unfortunately, they rarely actually pay. Some theorize that those in the vocal minority who don't like you are sending in pretend positive responses, to waste your time. Who would bother to do that? Perhaps just 1% out of the 3 to 4 million annoyed people, at most. That shouldn't bother you too much.

A similar percentage may try to phone you, or fax you, or send bricks postage due, or subscribe you to magazines. Ignore them. They're just 40,000 or so of the lunatic fringe, communist element you find on the net. They're just upset because you're making money and they're not. In fact, suckers that they are, they actually ended up paying to transmit your ad everywhere. Learn to ignore them. (That's not advice, it's just something you'll have to do.)

Now at this point you probably have to stop answering your phone, but keep those faxes coming in, and of course get ready for the mail. If you ever do get to see some of the E-mail you got sent -- wow, what a flood!

When it settles a bit, threaten to sue anybody who didn't like you. That should put some fear of God into them. They should have known better than to build a system so open. Sure, they built the network as a cooperative effort, but if they didn't want your ads, why didn't they put in protections against them or enact laws to stop them? What you did was probably legal, so what's their complaint? They're like people who leave their keys in their cars and whine when they get stolen. Really, like they didn't deserve it. They just don't see the wonderful new purpose to which their network can be put, to help small, exciting firms like yours get famous. That's the American dream, after all, and you're living it, or will, when the time comes to come back out of your bunker and reconnect your phones.

-Emily Postnews

[Ok, so this is more satire than pure sarcasm, the way my original Emily Postnews was. Sue me. (*)]

[(*) Above remark not addressed to Canter and Siegel.]

3009. Cable Routing to Outside

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-30 00:00:00 UTC
From: michaelc@mikeport.raleigh.ibm.com
Message-ID: <49kdm1$8u3@sernews.raleigh.ibm.com>
Source record: 234671

Does anyone have any good ideas about getting cables from the inside to the outside? I would like to hear from anyone that has methods of doing this WITHOUT major/visible holes in the wall or floor. I have access to a window if that helps.

ANY AND ALL IDEAS WELCOME!

73, de KB4LFH

QSL COLLECTION - the largest collection of its kind worldwide - is trying
to establish information on Howard Mason who on 12 January 1930 set the
world record for long distance communication when contacting Ernst Krenkel
at Franz-Joseph-Land from the base of Admiral Byrd's Antarctic expedition.
We are being told that Howard is in his late nineties now.
- Call sign?
- Address?
- Any other hints?
We are working on a book covering amateur radio pioneers and need this
background information for the Krenkel-RAEM chapter.
Tnx, 73

One more bit ... there are Amateur Radio groups that retransmit Space Shuttle audio. I think the NASA Ames Research Center radio club retransmits in your area around 145.58 MHz. That would be from near Moffett Field. You might not get it in Livermore. There may be other local frequencies in your area.

Good luck,
Ed, KF7VY

>You must be the life of the party.

What do YOU think is fun and exiting Burt. Why don't you share your secret to happiness and success with us so we can be better people... yeah, just like you!

Don't let me down. I'm eager to find out what's boring and what's exiting. I'm sure you don't mind sharing it with me - being a teacher and all. I'll bet you're a good one too!

See, I'm an active and enthusiastic Contester, DX'er, rag-chewer, tower climber, fisher man, hunter and much more. I enjoy it too, or I wouldn't be doing it. Please let me know which of these 'topics' are boring and which are exiting so I can change my life style and be just like you. Add or subtract a few items as you go too if you like.

P.S
I'm a CW and radio theory instructor as well. Is that better or worse than "Teacher of video, broadcasting and electronics"? Show me the way! Show me the policy of life! I need to know. I can't think for myself. I'm open for all suggestions. I don't wish to change my name to Burt Fisher though, but only if that's ok by you.

73, (oopps!, can I use 73 here or is that boring? Let me know!)
Thanks in advance

>
>Those damn Radio Shack engineers...how DARE they manufacture a solid, >reliably performer like the HTX-202, which ONLY works well AS ADVERTISED.
>
><g>

This sort of complaint (I'm not blaming you, Clint!) reminds me of the time QST did a review on the Yaesu FT-101 HF transceiver in which the author opined that perhaps Yaesu should have left out the 11M band. They promptly got a letter that basically called them "ugly Americans" for ignoring the fact that the Yaesu was being sold in countries where 11M was still an amateur band. (The complainer ignored the fact that Japanese and other companies routinely make otherwise-identical radios that have different band coverage for different countries, not only in the amateur field but in others as well.)

Of course, many FT-101s found their way into the hands of CB pirates. I've heard it alleged that more 101s were sold in the U.S. than there were hams licensed to transmit on HF.

Getting back to the topic, if Tandy wants to make a radio that only does 144-148 MHz they have every right to do so. Anyone who refuses to buy a 2M HT that doesn't also happen to be a 200-channel scanner for the 108-174 MHz band has that right as well. Both positions have their good and bad points.

Anyone know the right people to get reprint permission
from them (after you get turned down via normal
channels?)

Has anyone tried winter hiking and VHF contesting? The
two best spots to reach lots of VHF contesters, in my opinion,
are Slide Mountain in the Catskills and Grand Manadnock in
New Hampshire. Both are popular spots for winter hiking.

The January VHF Sweepstakes is January 20-22, 1996.

http://www.infoanalytic.com/ka9fox/welcome.html
is a good

place to find contest rules and information.

From: forsberg@cts.com
Message-ID: <30bd3ef6.4214340@news2.cts.com>
Source record: 234683

We are having problems locally in San Diego with our ATV repeater on the 900 Mhz band. The input is being torn up by radar. I was wondering if anyone knows what radars are present on the 900 MHz band. We are guessing that it is some sort of Navy radar. Possibily ship based. If anyone has any ideas they would be appreciated. The scan rate on the radar is about 5 seconds with a PRI of about 5 ms.

Don't let it throw you Dave. The usenet is *NOT* representative of the amateur radio community as a whole. It is a small, statistically skewed subset of the group that has (for better or worse) great 'propogation' and whose 'signals' exist for as long as your newsreader's retention period.

Follow their antics if you choose but don't make the mistake of thinking that the airwaves are as bad as they'd lead you to believe.

I've been licensed for about 5 years now and I'm still in a 'learning' mode. I started on HF with CW then got involved in a few clubs and some 2 meter FM drive-time and net stuff. Recently I've discovered HF-mobile, packet, computer logging and contesting. I'd like to learn more about ATV and satellite work over the next year or two. I'M HAVING A BALL and haven't yet met an operator that caused me more than a few seconds grief. I know EXACTLY where the tuning knob is and I KNOW how to operate it.

Welcome back Dave. I wish you well. Let me know if I can help you with anything.

And I offer my services to you, Burt. As your attorney, I would suggest you:

1. Quit cheating on your taxes
2. Stop ker-chunking the local repeater
3. Sell the wife and kids
4. Whereupon you DXpedition to Clipperton Is.
5. Come back and whoop it up at the local Go-Go bar
6. Ditch the Ford Pinto
7. Put up a real antenna
8. Buy more guns
9. Buy more vests
10. Host a radio talk show with the rest of the radicals and
convicted felons
11. Continue your prozac medication
12. Invest heavily in Ginsu Knives
13. Cease and desist in playing reville
for your neighbors at 6 AM
14. Stop swatting at those huge flying
bats, they really aren't there.
15. Inspect all packages with a 50ft pole
16. Replace your finals, "tune for maximum smoke"
was just a joke
17. Quit trying to smoke those banana peels, it
was just a joke

Now pay me. Thankyou.

P.S. I can also provide a counseling service too, provided I receive payment for the above services first.

>not being jumped. The truck was parked, and the occupant would turn
>the engine on about once every twenty minutes or so to warm up the
>passenger compartment. The battery exploded several seconds after the
>hood was raised. Who manufactured the battery and why did it explode?

The problem with these batteries is that they are prone to hydrogen
gas build-up when not properly vented. This is especially true when the
battery is charging. Somehow or another a spark was made when the
hood was raised. Possibly metal scraping metal, or maybe a spark was
produced when an under-hood lightbulb lit up. Was the guy smoking?

Automobile batteries shoul always be handled with extreme caution and
should never be used without proper ventilation. When re-charging these
batteries the caps should be removed. It would be a good idea to "fan"
the area around the battery before making any electrical attachment to it
to disperse the built-up gas.

PR>pruth@ocvaxa.cc.oberlin.edu

Hey Bill,

For a long time I wondered why the FCC does not get more involved in this. I had an extensive conversation with a lawyer friend of mine (he's also a ham radio operator). He has done some work with the FCC and has brought up this issue with some folks in Washington. Their unwillingness to get their feet wet has a name and it's called "money". We're not talking Federal Cuts here, but they are affraid of a major lawsuit with some wacko that wants to try to take a case all the way to the Supreme Court just to prove what profanity has to do with his 1st Ammendment Rights. It would not surprise me to see how quickly the ACLU would jump on that wagon. Sure there have been some cases recently but most have been prosecuted under some other reason like causing interfearance and interfering with police communications. So we go from "politically correct" to "politically affraid".

It's a shame that so few can ruin such a good thing. I really think that those of us who would like to see this end need to get involved. Wether by getting after them on the air or complaining to the FCC until they have to do something about it regardless of the consequenses.

I read some of the responses on this newsgroup and unfortunately like on the bands there seems to be a lot of uneducated Riff Raff here. Hang in there

Nonsense! My wife is a ham and she is not a citizen of the US. She
does have a green card as a permanent resident. She's a citizen of
Canada; was born in Belgium.

Not true.

You can have a US licence if,-

1. Your are in US legally

2. You are not a representative of a foreign government.

3. You have a US maling address.

I think you are wrong in using the examples you chose. Anyone who has
spent 7 to 9 hours in a fighting chair landing a near record Marlin would
know this is very physical.After 5 hours my hands began to bleed from
worn flesh. Racing is totally exhausting. T-hunting is difficult terrain
is brutal. I have done all three.

3043. FIRST COMPLETE MUSIC VIDEOS RELEASED IN THEIR ENTIRETY ON THE INTERNET

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-01 00:00:00 UTC
From: info@mw3.com
Message-ID: <49nr7a$i5n@dalesbred.terra.net>
Source record: 234554

FIRST COMPLETE MUSIC VIDEOS RELEASED IN THEIR ENTIRETY ON THE INTERNET

November 28, 1995, Binghamton, NY & Boston, MA - Today NAMS International, Inc. unveiled their World Wide Web site which allows users to access the Internet's first complete music videos to be available in their entirety.

Released on-line by MobileVision Technology Inc. is a live performance of the song `Somebody To Love' by the British super group QUEEN from MobileVision's 1992 `We Will Rock You' in-concert feature film. Other digital music video selections include two complete remix versions of the song `If 60's were 90's' from the group BEAUTIFUL PEOPLE featuring JIMI HENDRIX vocal and guitar samples and the full-length music video of MICHAEL QUATRO's new `The Ocean Song' from his VISION CD and video tape.

Internet users can access and download the music videos as promotional shareware at no charge from the NAMS World Wide Web site, which is hosted by Boston based Baudway Communications, creators of Music World 3, one of the Internet's most visited music related web sites. NAMS video files use a non-standard MPEG compression and decompression format combined with secondary compression to pack video, audio, text and still image data into smaller files, which means transmission times are reduced substantially.

Users first download the Interactive Multimedia Interface (NAMS-IMI) playback software and install it on any Windows 95 or 3.1 PC equipped with an audio playback adapter. NAMS videos can then be downloaded and played back from the PC's local hard drive in their entirety at twice the resolution of non-MPEG digital video clips now found on the Internet. At 28,800 modem speeds, downloading an entire music video with an average running length of four minutes takes about thirty to forty minutes. Digital videos of this running length and resolution currently found on the Internet would normally take three to four hours to download at these modem speeds.
The videos are freely redistributable by users as shareware.

"There are a number of exciting video technologies becoming available, some of which are attempting to deliver ten to fifteen frames per second of digital video through the Internet using standard modem connections.", says Greg Loveria, President and founder of NAMS, the National Association of Multimedia Shareware. "We applaud these efforts, however, users often just see a `slide-show' because the same video still image often remains on-screen for one to ten seconds before it updates to the next frame of video. This is because modems still have a very limited

bandwidth for transmitting motion video in real-time and piping this much information through the Internet is even more difficult. We chose to release downloadable motion video files as shareware because they playback in real-time off a PC's hard disk." Steve Getman, NAMS General Manager and Vice President explains, "Because NAMS video files are shareware, they can be retransmitted freely and reach on-line users that may not yet have Internet access, such as with Bulletin Board System users. This means that NAMS promotional video files can also move beyond the Internet to reach millions of other on-line users not yet connected to the Internet. Additionally users that access the World Wide Web via commercial on-line services, such as CompuServe and America Online, don't have to worry about incompatibility with their web browser not supporting a real-time data stream that often cause server and socket errors. On the NAMS Web site you simple download the video file and play it back off-line."

The NAMS world wide web site can be reached at http://www.mw3.com/nams/ or ftp users can access files at mw3.com in the pub/nams/video subdirectory. NAMS International, Inc. is a New York state corporation based in Binghamton, New York, USA and may be reached at:

Drew is calling someone else a "whinner"! Interesting. My Granmother used
to have this saying, "Boy thats about the pot calling the kettle black."

Besides, Drew has no evidence or proof of this 'change', nothing more than
his (unfounded) opinion.

In general, yes.

Country of citizenship or even country of residence is not a factor in applying for a straight US license so long as the applicant is not the *representative* of a foreign country and can give a US postal address.

On the other hand, country of citizenship is a factor in applying for a U.S. reciprocal license. An applicant must be the citizen of the country issuing the license upon which the reciprocal application is based and US citizens are not permitted to apply for a US reciprocal license.

I just thought of a great way to fix the entire problem--The "V" Chip"...
Yep, the major equipment manufacturers could install the chip in the
transmitter and receiver..If a transmitter senses a word such as poo-poo
or other indecent words it will send out a digital burst..If the receiver
on the other end activates his "V" chip he will reject the transmission..

This should only add an additional $850.00 to the cost of a radio which
should not cause a major impact to the amateur radio community according
to fact finding reports released by President Clinton's top level aides.

Waddya think...I'll have to petition the FCC immediately..maybe I'll
go to the "White House Web Page"...

Bob did not mention that recent revisions to the FCC Rules specifically
put these unlicensed spread-spectrum data systems at the BOTTOM of the
list of secondary users, with Amateur Radio only one step up. For details
read the FCC Report DC 95-21 dated Feb 6, 1995 (67 pgs) and the related
Private Radio Docket 93-61.

You might want to send a certified letter to San Diego Gas & Electric
andthe closest remaining FCC Field Enforcement Office advising them that
you believe that SDGE is causing destructive interference to a licensed
Part 97 radio system, with copies to FCC Gettysburg and ARRL HQ. All
unlicensed users are required to cease operation upon notification by a
Commission offical if they cause interference to any LICENSED user
(primary or secondary, including Amateur) of the 902-928 MHz band.

Propagation Forecast Bulletin 50 ARLP050
From Tad Cook, KT7H
Seattle, WA December 1, 1995
To all radio amateurs

SB PROP ARL ARLP050
ARLP050 Propagation de KT7H

Solar activity was down just slightly from last week, still listlessly drifting around the low part of the solar cycle. Geomagnetic conditions have been stable, except for November 27 and 29, when they were somewhat active. The stormiest period was around 1200z on the 27th when the K index reached six, quite a high value.

Expect conditions to stay somewhat unsettled through December 5, and then become very stable and quiet until just before Christmas. Unfortunately the solar flux should remain low, with values just above 70.

With low solar and geomagnetic activity, as well as the extended night in the northern hemisphere, December should be a good month to explore propagation on 80 and 160 meters.

There will be just two more propagation bulletins for this year, as the author will be vacationing in Brazil in the state of Bajia after mid month.

Sunspot Numbers for November 23 through 29 were 12, 0, 0, 0, 11, 14 and 18, with a mean of 7.9. 10.7 cm flux was 72.7, 72.2, 71.8, 72.7, 70.8, 73 and 72.3, with a mean of 72.2.

The path projection for this week is from Seattle and Dallas to Brazil.

From Seattle, 80 meters should be open from 0030 to 0930z, 40 meters from 2330 to 1000, and 30 meters from 2230 to 0030. Check 20 meters from 1900 to 2230 and 17 meters from 1800 to 2100. 15 meters may be open some days from 1800 to 2100.

From Dallas check 80 meters from 2330 to 0930z, 40 meters from 2230 to 1000 and 30 meters from 2130 to 0000. 20 meters looks good from

1500 to 2230, 17 meters from 1530 to 2100 and 15 meters from 1630 to
1930.

What an attitude! Sounds like you're the one that's whining...probably because you realize that the membership of your little "private club" is dwindling every day as more and more of YE OLDE FAHRTZ get the silent key. No code HF is only a matter of time...not "if", but "when."

When the day comes, I will be the first one to throw it in your face and say "I told you so." In the meantime, get off your high horse and face reality...your kind is becoming more and more rare as the natural process of aging takes it's toll. Meanwhile, the numbers of no-code techs continue to increase at a staggering rate, with more and more of them becoming increasingly vocal about demanding HF access. It doesn't take Einstein to see how this will eventually all play out, does it?

I bought a piece of plexiglas to fit the window opening. I
drilled holes in the plexiglas and put it where the
screen goes. The window stays open and the plexiglass keeps the
cold air out. When we sell this house, I'll just replace the
screen and keep the plexiglas for the next house.
Works great.

Besome an Amateur Radio Operator and then you can send packet, Amtor,
Pactor, RTTY, SSTV or FSTV digitally all over the world. SW is regulated
and you will get in deep trouble if you start broadcasting on unassigned
frequencies.

I would bet that their is probably a VHF packet network already
established between the two areas you mentioned and all you would need
would be a small 2Meter transmitter and a Packet TNC and you could send
all the digital messages you wanted for just a few hundred dollars.

This may be old hat but I noticed a mistake in the Dec. 1995 QST ad for the Kenwood TM-241A 2 meter transceiver. The ad is on page 175; under the TM-241A lettering in the lower right hand part of the page is the phrase "Dual Band Transceiver" or something like that, implying the 241 is a dual bander.

Wondered how it slipped through...

Given your (deleted) premises, I'd like to see both of our beginner licenses (Novice and Tech) have a time limit (2-5 years). Actually, there would no longer be any need for the Novice, so get rid of it. They (or it) should also be limited to subbands of no more than 50%, at least on HF (full privileges already being a done deal above 30MHz), and limited in power output (the Novice limit would do). Since the reason for the dropping of Morse testing relates to today's more advanced technologies, I'd say a written test of at least the level of the Advanced should be our first "permanent" class. Welcome the newcomers in with a simple entry-level license, but require that they in turn take the time and effort to show at some point via an advanced (small 'a') exam that they do have enough grasp of the fundamentals to remain on the rolls.

SPARTAN PACKET RADIO EXPERIMENT (SPRE)

General Information (long)

By: Ken McCaughey (N3FZX)
File: spre02pr.txt
Date: 29-Nov-95

The Spartan Packet Radio Experiment (SPRE) is an Amateur Radio (HAM radio) communications experiment. The primary mission is to test satellite tracking using amateur packet radio and a Global Positioning System (GPS). SPRE was developed and built by the University of Maryland Amateur Radio Association (UMARA) with assistance from NASA, volunteer engineers, and volunteer software professionals.

SPRE is one of four experiments on NASA's Spartan/OAST-Flyer spacecraft. The Spartan spacecraft is scheduled for launch on January 11, 1996 aboard the space shuttle Endeavour as part of mission STS-72. The spacecraft is a cube shaped, battery powered, retrievable satellite. Spartan will be deployed by the shuttle's robot arm and likewise retrieved after approximately 48 hours of free flight.

Mission Objectives:

* Promote amateur radio and amateur satellite communications.
* Test GPS and packet radio based tracking system using a Low Earth Orbit (LEO) satellite.
* Provide an educational tool to inspire elementary and high school students to pursue science and engineering.
* Provide a unique hands-on educational opportunity for college students.

SPRE is designed to relay ground station positions and transmit telemetry containing the GPS location of the spacecraft and housekeeping data. The GPS data is generated by another Spartan experiment.

Special software called APRtrak (tm) will be used at SPRE ground stations to plot the positions of stations and objects world-wide using SPRE transmissions. APRtrak uses full color maps and graphics with the capability to display detail maps of selected geographic regions. Amateur radio ground stations can transmit their locations to SPRE, and if heard, SPRE will relay GPS information back to Earth. All ground stations within range of SPRE will see the relayed stations plotted at the on the map at the correct geographic location. The APRtrak software will also decode and display SPRE housekeeping telemetry including temperatures, voltages, and system status. This software is freely available on the Internet for

installation on IBM compatible computers.

This technology has many applications in the amateur radio as well as the commercial worlds. Low cost Low Earth Orbit (LEO) satellites could be used to track storms, weather balloons, boats at sea, trucks, etc. Satellites could collect the location data from ground targets and download it to ground control stations. If the SPRE mission is successful, this capability may be incorporated into future amateur spacecraft, thus supporting the amateur's effort for technological improvement.

The operational aspects of SPRE will include amateur radio operators throughout the world. Elementary and High Schools are encouraged to enlist the aid of local amateur radio operators to set up ground stations and participate in the SPRE experiment. SPRE can be used as an educational tool in many classes including math, science, and geography.

SPRE can still be used as an educational tool even if a school is not in session during a fly-over. A simple amateur packet radio station can be configured to listen to the SPRE telemetry and record the data for later study.

Amateurs and schools who participate are encouraged to send the data they collect to the SPRE Project to help to piece together a composite picture of the mission. The final results will be made available to participating schools and the amateur radio community.

SPRE will use a ground control network, SPREnet, consisting of specially equipped amateur radio stations to distribute data via the Internet. These control stations will monitor the health and activity of SPRE.

In addition to the amateur radio experiment, the SPRE system will forward to Earth a sampling of real-time telemetry for two of OAST Flyer's experiments: REFLEX and GADACS. Spartan is equipped with on-board recorders to capture data from each of the experiments. Traditionally, an experimenter must wait several weeks to receive the mission data. SPRE provides a low cost, innovative solution giving experimenters the opportunity view a small sample of data during the mission while advancing amateur radio satellite technology.

The sample REFLEX data from the mass spectrometer will be used by the experimenters to provide feedback on how well their experiment is performing. SPRE will be providing GPS location and time information from the GADACS experiment. This information will provide some insight on the health of the GADACS GPS receivers as well as indicate the current location of the Spartan satellite. Using the APRtrak software described above, amateur radio stations and schools will be able to observe the track of the satellite as it passes overhead.

Data is transmitted on a downlink frequency of 145.55 MHz. The is the same frequency used by the MIR space station and the Shuttle Amateur Radio EXperiment (SAREX). The data format is completely printable ASCII characters and therefore is fully compatible with all amateur packet radio

equipment in common use today.

All of the hardware and software has been designed and constructed by students and volunteers. This low cost project has provided a great hands-on opportunity to gain experience in space communications. So far, several students have earned college credit for their work on SPRE. It has also helped some graduating students secure employment in the aerospace industry.

Information Summary

Mission: STS-72, Space Shuttle Endeavour (OV-105)

Launch: January 11, 1996 at 09:18 UTC (60 minute launch window)
Orbit: 28.45 Degrees

SPRE Deployment: 3 days 2 hours mission elapsed time
SPRE mission: Approximately 46 hours

Operating Mode: FM, AFSK 1200 baud packet radio
Frequencies: 145.550 MHz Simplex

Landing: January 20, 1996 at 04:54 UTC at KSC

WWW Home Page: http://w3eax.umd.edu
Anon. FTP site: w3eax.umd.edu /pub/spre directory

Ground Stations:

* Any amateur radio station or school with packet radio capability
* ARPtrak Software (available on the Internet)
- Runs on an IBM compatible PC
- Displays SPRE telemetry
- Unattended data collection capability
- Can replay satellite passes
* Simple packet radio station setup
- Licensed Amateur Radio Operator
- Terminal Node Controller (TNC)
- VHF Radio (amplifier recommended if transmitting to SPRE)
- VHF Antenna (beam recommended if transmitting to SPRE)
- PC Compatible Computer
- APRtrak Software Package4
- Satellite Tracking Software (Recommended)

To Participate:

Schools wishing to participate should contact the SPRE Project for more information and the APRtrak software. Send electronic mail (e-mail) to Ken McCaughey at kenneth@w3eax.umd.edu. Or send a self addressed stamped envelop and a 3.5 inch high density floppy disk to:

Attn: SPRE Project
Century Computing Inc.

8101 Sandy Spring Road
Laurel, MD 20707

For information on local amateur radio clubs, operators, and volunteer instructors please contact Peter Budnik from the Amateur Radio Relay League (ARRL). Send mail or e-mail to:

Peter Budnik
ARRL
225 Main Street
Newington, CT 06111

e-mail: pbudnik@arrl.org

That's why even the negative-IQ federal govenment assigns HF channels at
no less than 2.5 kHz increments. Tighter spacings are possible ONLY with
much steeper filter skirts than the manufacturers are building into
amateur or commercial SSB transceivers.

Now, I 've known three different Dan Newbys so far, and I'm wondering if
you are one of them. (One was from Fairview [OH] High School, one from
Moto, and one from Southern Company)

3072. Re: How to clean up the ham bands?

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-01 00:00:00 UTC
From: vbreault@rinhp750.gmr.com
Message-ID: <VBREAULT.95Dec1094802@rinhp750.gmr.com>
Source record: 234583
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

In article <49fq8n$cqi@news.cc.oberlin.edu> pruth@ocvaxa.cc.oberlin.edu writes:

> Although I change frequencies when I come across hams using
> profane, obscene language I wonder where, and how, the "self-
> policing" hams are supposed to do comes into play?

<Bill went on to wonder what we can do do clean up the amateur bands.>

I'm not sure there's much we can do about it Bill. I believe the behavior you see (hear) is but one more manifestation of the dwindling respect Americans show one another. This is a problem in our public schools, on our highways and even in our workplaces. I believe this stems at least in part from the "modern" and "enlightened" mindset that releases people from personal responsibility.

I'm not one to confront strangers about their anti-social behavior because I worry that instead of counseling a misguided or absent minded person I may be confronting a sociopath. Perhaps other, less phobic persons would jump right in. I KNOW that some equally anti-social people jump in all too frequently.

So what can we do?

(a) Nothing - It's a widespread social problem that will self-correct with Armegeddon.

(b) Confront them on the air - Embarrasing people publicly often works counter to the way you'd expect.

(c) Send them a letter - May work better and you can omit the return address if you're paranoid.

(d) Allocate LOTS more spectrum to the amateur radio service so the chances of encountering one of those lids is smaller.

<Warning - these aren't flame bait but are intended to foster discussion>

(e) Raise the licensing requirements and tax the dickens out of amateur radio in order to make it an exclusive passtime for the gifted and wealthy. Make it as tough as a commercial pilot's license and as expensive as owning a vacation home. I'd fail on both those counts so I'd be off the air but those that DO manage to get on/stay on would treasure their license MUCH more than some seem to do today.

(f) Enact legislation that provides for the creation and empowerment of private industries who's revinues come from the successful prosecution of criminal offenders. Make it a profit center and watch

a new industry grow.

(g) Revoke private ownership of transmitting equipment. Permit transmitters only in licensed, taxed, insured club buildings. Place the burden of policing the individuals on their peers who share in the leagal and financial liability.

(h) <any others?>

I'm posting this to ".policy" as well as ".misc" and have added a followup pointing to ".policy". I encourage people to place their followups in ".policy" where this kind of discussion belongs.

I furthermore encourage people engaged it similar policy related discussions to take theirs there too.

Source record: 234584

<<Probably - The FCC is being underfunded and re-organized because most if
not all of their frequency monitorring activities will eventually be done
by the National Security Agency.

What makes me feel this may be true is the mention in the press that there
may be closures of existing monitorring field stations by paid staff and
these
functions will be controlled remotely from a centralized site in the state
of
Maryland.... hmmm Fort Meade? >>

****

The NSA will *not* be monitoring the Ham bands. But it is a cute
fantasy.

Reed Hundt (FCC Chairman and by John Malone to be "the most
dangerous man in America"- an opinion I concurr with) --- Hundt said
in a statement that monitoring would be done remotely from the FCC's
Laurel Monitoring station.

3074. Re: rec.radio.amateur.burt_fisher?

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-01 00:00:00 UTC
From: n4jvp@ix.netcom.com
Message-ID: <c17cb$152ec.2f8@kirk.microsys.net>
Source record: 234585

Dear Mr Fisher
I must apologize for stating that you authored the post entitled "Gutless Assholes". After receiving your E-mail I reviewed the header to that post. I found the header to be incomplete and therefore invalid. In addition the path shows that it originated from a server at the University of California at San Diego and not from either ccsnet.com or alterdial.uu.net.
As far as having nothing better to do in my life than seeing what you are doing, you are gravely mistaken. I downloaded the latest headers for the newsgroup rec.radio.amateur.misc to see what was happening in the newsgroup. With my post I was attempting to make a point to all subscribers of the newsgroup that the primary topic of the newgroup is amateur radio and not to comment continually on your inane posts. When nine percent of the posts involve one individual in either the subject line or as the author something is askew!
Your posts generate threads with drivel that rivals yours, in my opinion. Generally these threads contain nothing constructive to say concerning the hobby. A great deal of the time these threads do not have the key words "Burt" or "K1OIK" in the subject line so I can only hazard a guess as to what percentage of posts relate to you and your posts.
As you have stated more than once ignoring you will not make you go away. Not ignoring you will cause many others to go away. You my friend seem to have little better to do than sit at your keyboard and make meaningless post after post after post. Ah once again I am mistaken, you also sit there and read all the responses your posts generate. How many hours a week do you devote to this aspect of your life? Is this any better or any worse than contesting or passing traffic?
I will continue to visit the newsgroup from time to time in hopes of finding threads truly relevent to the hobby but I fear relevency will be on the decline as long as you and your banal topics seem to dominate.
My reference to your wife as a "trophy wife" is based upon your continual characterization of the lady. Whenever you mention your wife you seem to mention her physical attributes as if she is of more value to you for the image she projects than for the person she is. I mean no offense to Mrs Fisher.
Please adhere to the copyright notice that closes the post. I do not wish to be quoted out of context so that I might appear to sanction you or your pedestrian posts.
In closing Mr Fisher let me quote the author Ilka Chase. "When he said we were trying to make a fool of him, I could only murmur that the Creator had beat us to it."

sincerely
Fritz

I would love to speak to them.
I would do it for free, no conditions.
They would not have the balls.

I could pick any topic, SSTV, youth in ham radio, farts in ham radio, the internet.

That club has got to be the worst example of hams worldwide.

3076. rec.radio.amateur.burt_fisher?

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-01 00:00:00 UTC
From: n4jvp@ix.netcom.com
Message-ID: <c17cb$42410.390@kirk.microsys.net>
Source record: 234587

This morning I took a break from studying OOP and decided to see what was going on in the usenet newsgroups that I no longer subscribe to. One of these newsgroups is rec.radio.amateur.misc. and I stopped that subscription because of the high number of posts by Mr Fisher and the high number of responses to the same.
My newsreader loaded 588 new posts for r.r.a.m. and it seemed that an extremely high percentage were from Burt or related to one of Burt's posts. I ran a simple search using "Burt" as the key word and 53 posts (9%) had the key word either in the title or in the author's name. A simple search using "k1oik" as the keyword yielded four additional posts. A total of 9.7% of the posts had one of the two keywords in the title or author's name while 6.3% of the posts showed a key word in the author's name. The searchs obviously do not include the numerous responses to Mr Fisher's posts or responses to posts concerning Mr Fisher's posts. I suggest renaming rec.radio.amateur.misc to rec.radio.amateur.burt_fisher.
While I consider most of Mr Fisher's posts to be frivolous and not germane to amateur radio, I do support his right to publicly show himself to be a fool. I do not, however, support his use of innuendos concerning other amateurs' sexuality, education or morals (BTW, Burt, the word is spelled eunuch not unik) nor his use of profanity in either the title (re: "Gutless Assholes") or body of his posts. In addition I am not concerned what Mr Fisher's trophy wife thinks of amateur radio operators.
Reviewing the headers of Mr Fisher's most recent posts, I must commend him for no longer cross-posting to multiple non-related newsgroups.
I guess I'll be visiting this newsgroup even less often...

Gareth Crispell <stranger@ccsnet.com> writes:
>I guess I must be missing something here,but I fail to see how sitting on
>your butt for 10 hours and calling CQ contest is in any way,shape,or form
>an athletic endevour. Likewise, how can driving around in a car with a
>locator be considered an athletic event ???????
>
>N1MSV

Yep Gareth,

contesting IS a kind of sports event. Of course it differs from
a 100yard sprint during athletic competitions. There are many
other forms of more or less strange sports like chess, shooting,
fishing, car racing to name some popular ones. Contesting is not
popular and other people always consider those activities unknown
to them to be merely idiotic.

You need to be in good physical shape to perform well in a contest.
During last weekend's CQWW I didn't sit on my butt for 10 hours -
I sat there for 42 hours and I had fun!
But I think noone outside contesting will get this...

The best thing for you to do if you want to talk about contesting without
getting flamed by such dimbulbs as Burt Fisher is to subscribe to the contest
mailing list. Send a message to cq-contest-request@tgv.com, with no title
and the single word SUBSCRIBE in the text. Volume on this list averages
about 20 messages per day unless there has just been a major contest,
in which case there may be 50 per day or more as people post their scores
and comments.

If you really want to get their attention post this message to some of the comp.sys hierarchy. In the great scheme of things there just are not that many hams!

good luck

SW radio is regulated CB is not. usually CB does not bend over the horizon.
To use SW radio you need an amateur licence...

>
> Does anyone know how possible, leagal and/or expencive is this project?
>
possible, yes. If you've got the licence it's even legal, but still then not
appiciated by other ham's. If you are using CB you'll find the chanels to small
(close together) to use 28k8, common practice on CB is 1k2 or 2k4. This
is due to the bandwith required to transmit 28k8 over loger distances
while leaving some s/n ratio at the receiving end.
1k2 is not expencive, a few bugs for the modem is all you need to spend.
If you're willing to learn for the licence, the ham-radio packet-network
might come close to your needs.

If you want to know more about hams just ask an american ham. Maybe you
should reed rec.radio.amateur.digital.misc for a while.

Hello all.

I am interested in an interesting idea that I have for my computer:

I want to connect the computer to another one over the radio waves.
I need it to be running 24 hrs a day 7 days a week. It has to broadcast
over about a 60 mile range. And have a speed of about a 28.8 modem.

Preferably I would want a full-duplex connection just hooked up to
modems on both sides. But other similar ideas I want to consider for
myself too.

I live in the US, and in fact I want to transmit from the east cost of New
Jersey to Long Island NY.

I thought that maybe SW radio would be good, since it's a. not regulated,
and b. can bend over the horizon.

Does anyone know how possible, leagal and/or expencive is this project?

(e-mail is prefferable)

Generally, a flashing display means the PLL is unlocked. Your radio needs service.

Transmitting data over HF radio is done all the time by agencies in Aviation, Military, Maritime and Commercial. Basically the problem has to do with both regulation and bandwidth. First, the HF bands are highly regulated and you would have to get the FCC to assign you a channel, or you could become an amateur radio operator and use one of the many data frequencies available to them.

Next, the typical transmission rate on HF is less than 1200 baud. The fastest commercially available modem I am aware of is made by HAL electronics and using a special modulation scheme called CLOVER, they can attain a rate of 4800 baud, theoretically. But given propogation conditions it is usually much slower than this.

Because HF frequencies are assigned to many users internationally, what may appear to be a non-congested spectrum is actually quite busy. Therefore the channel bandwidth is narrow, giving everyone a chance to get on the air, but because of this the transmission rate for digital data is very slow, often 100 baud or less.

I would recommend that in order to get up to speed on the latest technology and to try out some ideas that you first contact the local amateur radio club and see what they are doing.

Craig

3090. CW Software?

3092. Maxtrac help please!

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-02 00:00:00 UTC
From: skoone@vnet.net
Message-ID: <49oaj6$70u@ralph.vnet.net>
Source record: 234493

Hi all. I just picked up a VHF lo-band 42-50 mhz maxtrac 300 radio and have been desperatly trying to get the maxtrac software to go outside the 50 mhz limit on into the ham 6m band. But, thanks again to Moto's determination to get as fara away from the ham freqs as much as they can, I cannot get their software to go up to 52 mhz. I tried the "hold the shift key while typing in the frequency" trick like what is done in the radius software but no luck. I tried USING the radius software on it and no go either. I am now stuck. Has anyone out there found a way around the 50.0 mhz limit in the maxtrac software???

All I can determine is that if the radius version will go up to 54 mhz, so will the maxtrac, but how???????

Thanks for your help!

Steve KA4YMY

skoone@vnet.net

PS..I have tried several different versions of the maxtrac and radius software but nothing there either..

: the answer is YES.

You just can not work for Her Majesty's government.

If you hold a British license, just apply for a Alien Amateur Radio
permit, therefore you can get extra class privs.

URGE THE US TO SIGN CEPT!!!!

I sold computers at a local dealership for about a year.
We also built custom computers as well. I was hired because
I had experience building computers from scratch. In March
of '95 we picked up the PB Line and man was I amazed. We
discovered that PB was putting very slow hard drives, very
slow video cards, and other parts that were not what I would
call "current". Our 486 DX2-66 computers would exceed the
performance of PB's Pentium systems up to 75 Mhz. We also
built 486 DX4 80 & 100 systems that blew the socks off PB's
Pentium 90 & 100 systems. What gives??? Their poor
supporting hardware (HDD, HDD controller, Video controller)
seems to bottleneck what is otherwise a fantastic processor.
As far as service was concerned, when someone had a problem,
we simply exchanged the computer for up to 1 year!! We were
the #1 PB dealer in the area so we could easily make PB eat
it or drop their line!

My suggestion to computer buyers is to build your own!! If
you don't know how, find someone that does. You can then
hand pick each piece that goes into it and get a good
performance machine. Another rule of thumb I use is to NEVER
buy a computer based on the software packaged with it. It is
only a sales gimmick!

Price wise custom built computers run a little higher but the
performance advantage is worth it in the future. And by
hand picking good, brand-name parts, you'll have less service
problems.

btw...we commonly referred to the PB as our best POS (Piece of
$hit) computers!

Forget it. Use phone lines for that kind of speed. Only microwaves allow
that kind of bandwidth!

3097. This Week in Amateur Radio #140 (for air through 12/8/95)

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-02 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <xTLlLpz.sanderman@delphi.com>
Source record: 234498

Here is a summary of news items covered on edition #140 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 8-Dec:
-
1. Massachusetts Enacts "PRB-1 Clone" to Protect Amateurs' Rights
2. Merger of Major Equipment Manufacturer Won't Affect Ham Sales
3. ARRL Announces Winner of Annual Hiram Percy Maxim Award
4. Amateur Radio Mourns Loss of Two of its Most Notable Citizens
5. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
6. "This Week in Amateur Radio" to Temporarily Suspend Operations
7. Upcoming Special Event Stations with George Bowen, N2LQS
8. "Amateur Radio Newsline" - Edition #955 from Los Angeles
9. "The RAIN Dial-up" from Chicago
10. Weekly Propagation Forecast
-
Funding for the program's transmission and production expenses was
provided this week by a grant from the N6ICW Repeater Fund, of
Sacramento, California, which carries "This Week in Amateur Radio"
on the N6ICW repeaters in Sacramento, serving the Sacramento Valley
and San Francisco Bay area on 147.195 MHz, and in South Lake Tahoe,
serving Tahoe, Reno, and Carson City, Nevada on 145.15 MHz.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard each Saturday at 8:00 PM (EST) and carried on VHF/UHF
repeaters throughout North America and on 160 meters at 1860 kHz.
Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
Due to the loss of satellite facilities, the service is being
temporarily suspended. The "Tech Talk Network" expects to complete
negotiations with a new satellite uplink carrier by the beginning
of January. "This Week in Amateur Radio" will return at that time.
Details will be posted as conditions warrant. All affiliates are
requested to contact the producers for further information.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (e-mail kxkvi@delphi.com) or Stephan Anderman, WA3RKB,
at 518/664-6809 (e-mail sanderman@delphi.com). You may also reach
them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

>Japan's "No-code HF" license is effectively the same as our CB radio
>license.

Not even close. They have to pass a written exam considerably stronger
than our amateur exams, and they face an on-site inspection of their
HF station, which few of our stations would pass, before they are issued
a station license. (Many Japanese amateurs don't have a station license,
and have to operate HF from a club station, because of the strict inspection
requirement.)

We ran into this latter requirement when we wished to take a satellite
truck to Japan. We had to have a separate inspection and station license
endorsement for each and every uplink location we wished to use. A major
hassle.

Message-ID: <49psog$phm@giga.bga.com>
Source record: 234502

3 khz is the standard "international good amatuer practice", any less, will cause interference to stations
above or below it, actually, 5khz is preferred spacings of most QSO's. 1.8khz is not a very good space
& WILL cause interferance. We must remember that the frequency that your rig is set on(displayed) is the
center of your bandpass, & 1.5khz each side of that is the normal "acceptted" bandwidth.

3102. Re: Repeaters masking tones

Newsgroup: rec.radio.amateur.misc

Source record: 234503

Jeff, your reply is incorrect....

The ACC controller does NOT affect PL or subaudible tones...
ONLY DTMF (Touch Tone) signals are muted by most repeater
controllers (and NOT just ACC)..

THE MAIN problem with PL thru a rptr is the audio path it takes..
Mic inputs cannot pass PL for the most part and this is the most
likely place a rptr ties its audio into....therefore the RPTR
cannot retransmit the user's PL tone...

I don't think contesting is mindless, althought it makes the bands
very zoo like.

I don't get into every contest, but I do like working field day and
I tried the VHF contest last summer.

For field day every year myself and my friends try something different.

I believe that some of the important aspects of ham radio that I've
learned are as a result of working field day contests for the last
four years.

Next year we're planning on running strictly from deep cycle batteries,
and we're planning on building a human powered generator to recharge
batteries that are not in use.

I agree I don't believe the ham bands are the place for fowl language.

Don't get me wrong, I'm no saint, I've certainly spewed my fair share
of fowl language on almost a daily basis. I'll tell you though that
I don't use fowl language on e-mail, snail mail, anywhere on the
internet, on ham radio, on CB when I use to hang out there up until
1990, and in front of my mom.

Also I hear a lot of stories of people talking about how hams on HF
were heard using profanaty. I'm not on the radio on a daily basis
but I've rarely heard any of the profanity some people routinely
complain about.

Message-ID: <FAUNT.95Dec2113834@netcom20.netcom.com>
Source record: 234507

Actually, if you have a UK license, and apply for a reciprocal permit,
you are limited to the frequencies that you can use in both countries.
For instance, with a UK A license, and a US reciprocal permit, you're
only allowed to use 3.5 to 3.8 MHz, 7.0 to 7.1MHz, 50 to 52 MHz,
144 to 146 MHz and 430 to 440MHz of these applicable US bands, and the
UK power limitations are in effect because otherwise you'd have more
privileges here than in the home country. 97.107(b)2
Other bands are the same, so you'd have full band privileges here,
although would be required to obey the US phone band limitations.

One of the problems with signing the CEPT agrrement is that the
testing would have to meet certain requirements. In the UK, they had
to add testing about valve (tube) amplifiers to meet the CEPT
requirements. The CEPT also requires Morse code testing for HF
privileges. I don't know any more detail about these requirements,
and how much change would be required in the US to meet these
requirements. It's difficult to get the ARRL to answer such
questions, I suspect because they don't have definitive answers.

I plan to take the UK RAE and Morse code test next May, in order to
get a CEPT license. Their code test is noticeably harder than ours,
but my studying indicates the RAE (written test) is not as difficult
as the Advanced Class US test.

3107. GB2RS News 3rd December 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-02 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <817959054snx@llondel.demon.co.uk>
Source record: 234508
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 3rd of December and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

At the Annual Meeting of the RSGB yesterday, the 2nd of December, the President, Clive Trotman, GW4YKL, presented a cheque for 25,000 to Ron Broadbent, G3AAJ, for the AMSAT Phase 3d satellite project. In addition, it was announced that the Society's Council has agreed to make a further contribution of 25,000 on condition that AMSAT-UK raises a similar amount from other sources.

A new permanent special event station is being opened officially today, Sunday the 3rd of December. At Bletchley Park in Buckinghamshire, RSGB President Clive Trotman, GW4YKL, opens GB2BP which is being run jointly by the Bletchley Park Museum Trust and the Milton Keynes and District Amateur Radio Society.

Conditions were excellent for the CQ World Wide DX CW contest last weekend, especially on the lower-frequency bands. Japanese and Caribbean stations were worked on 160 and 80 metres, as were stations in Zone 3 - the Western states of the USA. However, there was very little DX available on 28MHz. TY5A, operated from Benin by Roger Western, G3SXW, among others, was much in evidence on all bands.

A new GB2RS broadcast is being introduced today, from the station of G1ZCW near Louth in Lincolnshire. The transmission is on 70 centimetres, channel SU21, at 10.00am. Although initially this broadcast will be made with low power, this is an excellent site and is expected to give wide coverage. Reports should go to G1ZCW, and would be much appreciated.

On the 25th of November the RSGB Repeater Management Group discussed problems relating to the GB3NA and GB3SY repeaters which have been off the air since September. Before issuing a new Notice of Variation to allow them back on the air, the RMG felt that it would be sensible to wait until after the UK FM Group Northern had held its AGM, and the new Committee had taken over from the existing caretaker committee. The RMG will inform the group of the conditions agreed between the RA and the RMG that must be accepted before the NOV is issued. This will allow the group to explain everything to their members at their AGM. The AGM is to be held at the King William the Fourth public house, Cutsyke, Castleford, on Sunday the 10th of December, meeting at 7.30pm for 8.00 pm, and all are welcome to attend.

And now a message from the Chief Morse Examiner, to RSGB Morse test examiners in Scotland, who may have been affected by the backlog of mail

caused by the recent postal strike. Examiners in Scotland are reminded that if they have not received examination papers from the RSGB, candidates should be tested using the emergency test-on-demand forms already issued for just such an eventuality. The results should be telephoned to Lynnette Ranger at RSGB HQ. Candidates in affected areas may also telephone Lynnette at the RSGB, on 01707 659015, if their results have not been received within ten days.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Thailand, DL2FDK will sign HS0/DL2FDK from Friday the 8th of December until the 12th of January, on all bands from 40 to 10 metres, CW, SSB and PacTOR.

From the Netherlands, VE3MR is signing PA3EVJ from the North Sea Coast (South) Island Group, which counts as EU-146 for the RSGB IOTA Awards. He is active from now until Monday the 13th of December. Check around 14260 and 21260 kHz.

And Peter, ON6TT, is on a Red Cross mission in the Ivory Coast, TU, until just before Christmas. He hopes to be active, but much of his equipment is still in Australia because of the postponed Heard Island DXpedition.

Now news of some special event stations:

SP0TPAX is a special event station in Poland is on the air from the 1st to the 15th of December. It commemorates the 70th anniversary of the first amateur radio contact in Poland which took place on the 6th of December 1925 between Tadeusz Heftman, whose callsign was TPAX, and Dutch amateur Ten Kate, NOPM. SP0TPAX will be active on all the HF bands on CW, SSB and RTTY.

And PA6AAA is a special event station in the Netherlands which will celebrate the one-thousandth broadcast of the weekly "Randstad Amateur Net". PA6AAA will be on the air from Friday the 8th to Sunday the 10th of December on all bands from HF to UHF. British amateurs are invited to call the station and every QSO will be confirmed by QSL card.

Next the Rally News:

The Verulam Amateur Radio Club rally takes place at the Watford Leisure Centre in Horseshoe Lane, Garston, near Watford today, Sunday the 3rd of December. The event features trade stands, a bring and buy stand and a grand raffle and the doors open at 10.00 am.

The Thames Valley Electronics Rally also takes place today at Kempton Park Racecourse, Sunbury on Thames, in Middlesex. This event features manufacturers and retailers, antenna supplies, a bring and buy stall, specialist groups, and computer and component retailers. Doors open at 10.30 am.

The first Portland Amateur Radio Club Amateur Radio Rally and Craft Fair takes place at the Burton Cliff Hotel, Burton Bradstock, near Bridport in Dorset today, the 3rd of December. The event features traders; local radio club, RNARS and RAIBC stands; a Novice information desk; and a bring and buy stall. Doors open at 10.30 am.

And the SDX Support Group is hosting an Amateur Radio and Computing Rally at the Maryhill Community Central Halls, Maryhill Road in Glasgow today. There are two lecture streams and a large RSGB presence at this event. RSGB Council or Committee members will be represented at a Packet Forum, RSGB VHF Committee Forum, HF Contests Committee Forum and Council Forum.

Now for the HF contest news:

The "TOPS" Activity Contest is taking place this weekend, and finishes at 1800 UTC tonight, Sunday the 3rd of December. Activity is between 3510 and 3560 kHz, CW only, and logs should be sent to OE1TKW.

The ARRL 10-metre Contest takes place next weekend, the 9th and 10th for 48 hours. CW and/or SSB can be used and everyone works everyone else. Send a report and serial number. Unfortunately the dates and rules published in the December RadCom were incorrect. Anyone intending to enter this contest who requires a copy of the rules is invited to contact the RadCom office at RSGB HQ on 01707 659015 as soon as possible.

Next some VHF contest news:

The RSGB's 144MHz AFS, Fixed Station, and Listeners' Contests are taking place today, Sunday the 3rd of December, from 0900 to 1700 UTC. The rules are in the July RadCom.

The fifth and final session of the RSGB 1.3 and 2.3GHz Cumulative Contest takes place tomorrow evening, Monday the 4th of December. The rules are in the June RadCom. Please note that this contest takes place between 1930 and 2200 local time, as printed in the rules, and not at the times stated in the Contest Exchange column in the November RadCom.

And now the solar factual data:

The period from the 20th to the 26th of November saw solar activity at very low levels, and the geomagnetic field at extremely low levels. Sunspot numbers declined from 15 on the 20th to zero by the 24th, with a mean of 8. Solar flux levels also declined from 74 units on the 20th, to 72 units, with an average of 73 units. No solar flares were reported. The electron fluence remained at moderate levels, and X-Ray flux remained at the minimum level of A1.0 units. The 90-day solar flux average on the 26th was 75 units, the same level as last week.

Geomagnetic activity remained at quiet levels, and declined from an Ap index of 7 on the 20th, to only 1 unit on the 24th, 25th and the 26th. The average was Ap 3 units, which is the lowest level this year. The period from the 20th to the 26th of February 1995 had an average Ap

index of 4 units. The aa indices, as supplied by the British Geological Survey for the period from the 14th to the 20th of November, saw activity at unsettled levels with an average of 11 nanoTeslas, which is just K2. Bartel's rotation number 2217 started yesterday, the 2nd of December.

I'll repeat the figures: spots - 8, flux - 73, Ap index - 3, X-Ray flux - A1.0.

Unfortunately we have no ionospheric data for Central France this week.

And lastly the solar forecast:

This week, with the quiet side of the sun looking our way, solar activity is expected to remain at very low levels, with the solar flux levels remaining around the mid 70s. Geomagnetic activity is expected to start the week at active levels, but then decline to quiet levels for the rest of the week. Ionospheric MUFs during daylight hours are expected to be about 23MHz for the south, and 20MHz for the north. The darkness hour lows are expected to be about 9MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Quebec and G7 Victor X-Ray series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Papa series.

I've done some reading and it appears that in order to operate
no-code HF in Japan the operator must operate at no more than 5 watts
PEP. I wouldn't want to exchange 95 watts of my Kenwood and 295 watts
of my Drake in order to operate no-code. In fact at 5 watts code
would be more reliable than SSB.

Just a thought.

S. Sampson (ssampson@icon.net) recently wrote
in <ssampson.19.00082DD2@icon.net>:

: I'm pretty sure the interference he's seeing is from the military. And they
: don't really care about Part 15 or Part 97. The only way to get them to change
: frequencies, is to jam the radar. They will either blank the azimuth or shift
: frequency. No need for high power, just repeat the pulse train back to the
: radar with a random delay. This will look real pretty on the screen...

That would require the Amateur station to communicate on the air with the other service. Do you suggest this is proper? This is shared spectrum, with several licensees of higher standing and multiple uses with lower standing. You might want to review some of the newer phased array spread spectrum radar systems the military as well as commercial operators are using today. Radio location has many applications in the civilian sector.

All amateur spectrum above 420 MHz is shared with other radio services. Jamming them is not the answer. We only stand to loose more spectrum using your tactics.

The military government stations really do not have to care about Part 97 or Part 15 stations. The military is the Primary user. All others are secondary.

The commercial radio location services on 902 are primary and can ask amateur stations to vacate their frequencies. This has been done many times in southern California. An ATV station is a big target as they consume well over six MHz of their commercial spectrum.

<<The American ham community is a fairly representative subset of
American society as a whole.>>

WRONG Ham radio's demographics are extremely narrow.
Overwhelmingly white men over 40. Statistically speaking there are
few women, and fewer minorities.

Ham radio is an institutionally racist hobby. Hardly diverse.

Ron says:

<< I may never learn code - one of the reasons is HF is a
<< don't care in my book. My experience has been that those who
<< adamantly believe code is so important are typically defiencient
<< in their knowledge of modern technology.

As always, No-Coders blame everyone but themselves. They "don't care" to learn it. OR They call those that support the code as test criteria as arrogant. OR challenge their opponents "knowledge of modern technology".

You haven't learned the code because you don't have the "fire in the belly". You don't want it bad enough. Lethargy comes to mind. Lazy, complacent, tired.

The issue isn't whether a 19th century mode of communication is relevant. The issue is *YOU*. And *you* come up short.

Good luck on VHF with your fellow NO-CODE apologists.

>Tell me, how many people can troubleshoot/repair the likes of the IC-775DSP
>or a similar high-end transceiver? They're like the latest cars and trucks,
>requiring special test equipment and techniques, to service.

So your complaint is that hams haven't kept up with current technology?

Whose fault is that?

Do you want the manufacturers to keep making simple obsolete radios so
that hams don't have to learn new things and update their test equipment
when they update their radios?

Perhaps we should never have come down out of the trees?

> Are they all FM?
> Can they be received from Malaysia?

They are all WFM except for the Ham ones which are NFM.
143.625 is also a frequency they use. Mir does pass over Malysia about 5 times
a day. Here are the next passes in UTC:
12/02 01:54 9 min window
03:31 9 min window
13:32 3 min
15:04 10 min
16:45 2.5 min

12/03 01:00 7 min
02:34 10 min
14:09 10 min
15:46 8 min

My suggestion is to get a Satellite tracking program, that way you will
be able to predict the passes. The times I gave are good for Butterworth.
Let me know if you have any luck. 145.55 is usually active in Packet.

FreeWave Technologies makes a spread spectrum modem that, depending upon conditions, might be able to meet your needs. With clear line of sight we can transmit full duplex 115 KB data over 20 miles.
Under ideal conditions much greater range can be achieved (recently a customer of ours had a 90 mile link from Mt. Everest to
Kathmandu with a 5 watt amplifier on only 1 end). The product can also be used as a store and forward repeater. Therefore,
with a combination of directional antennas, good line of sight, and a repeater or two, our product can do the job. Please let
me know if you would like some more information.

FREE PAGER FACT SHEET (Prices/Spec subject to change without notice)

FOR YOUR PROTECTION, WE ARE A PARTICIPANT IN THE BETTER BUSINESS BUREAU CUSTOMER SATISFACTION PROGRAM !!

- PAGER COST - FREE !!! (retail value is $ 75 to $ 85) Activation is required
at time of order.

- Basic service is just $9.95 per month, billed quarterly.

- No long term contracts or credit checks !

- Special Discount - Accounts who order 4 or more pagers receive a discounted
rate of just $8.95 per month !

- All pagers are NEW and carry a 1-Year Manufacture's limited warranty.

- Pagers are shipped with Black cases. Requests for color cases will be honored, subject to availability and additional cost.
- Minimum pager features include, but are not limited to the following:
Standard Features:

- Local telephone number to access pager
- Digital display PLUS 9 CUSTOM-PROGRAMMED (from your own phone) preformed Alpha messages.
- 18 telephone number memory
- Each call is time stamped
- 4 Tones and silent/vibrate mode select switch
- Basic service covers a radius of approximately 250 miles

Optional Features:

- 800 telephone number access
- Voice Mail
- Dual Area Code telephone access (Same Pager Number)
- Nationwide Paging with 800 telephone number access

- One time activation fee of $37 for programming and phone number selection.

- In Summary - After activation, the Pager is YOURS to Keep ! - This is NOT a lease ! - At time of order - a deposit is required for the first and last month of service (non-refundable), along with the one-time activation fee, and a $ 3.00 shipping charge. (Grand Total - $ 59.90 - Provides FREE Pager and 2 Months of Service - Each additional month of service is just $ 9.95 per month, billed quarterly)

- Check, Visa, Mastercard, American Express are accepted for payment.

100% SATISFACTION GUARANTEE - CALL US TO ALSO FIND OUT HOW YOU CAN EARN INCOME FOR YOURSELF OR NON-PROFIT ORGANIZATION.

TO ORDER, E-mail your name and mailing address to: jpcirone@aol.com OR call 1-800-473-9934.

I just experienced a funny thing. The memory presets on my Kenwood TH-22 were erased.

Now, I did have the radio in the car and it slid across the carpeting. Perhaps static electricity?

I have recentered a few frequencies and it is fine. Has anyone else ever experienced this? What could this have been?

Thanks
Avery N3TOU

: No, their yelling back and forth arguing about who's cock was bigger,
: who called who, who fed ex'd what, who's son was a ham, who's annoying
: while they type in all caps.. THAT is spamming. YOUR spamming, telling
: someone the're spamming. Get a life..

A "spam", by net convetion, is a posting to multiple groups - where some of the groups have nothing to do with the matter of discussion. They are usually, but not always, of the "make money fast" type crap.

People sometimes continue the spam unknowingly, when they reply to a post without checking the newsgroups list - and trimming it to the applicable groups.

Your misuse of the word, to provide more emotional impact (apparently) does NOT change this meaning.

I was not saying that the others were spamming the net. Far from it, which you would realize if you bothered to read what I wrote. It is listed above, since you were polite enough to quote the comment. I even trimmed the groups to the radio groups - which are the only ones to which this particular discussion belong.

Bill

Mike,
I agree with ever thing you say except the ideas about the Novice and Tech license. The Novice license IS still needed (let people get their " feet wet and test the waters"), however, it should be as of old and not renewable. The Tech license is a step up from the Novice and when I got my Tech (back in '76) the theory was the same as for the General (which we all know). That should be brought back and the Tech be a license for those that have the theory.

The General and above would require more theory and regulation testing.

The privileges granted to the Tech and above should be kept as they presently stand.

Thanks for listening and 73

3126. Re: HF TOO CROWDED?

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-02 00:00:00 UTC
From: Charles Thompson <cthompso@north.nsis.com>
Message-ID: <49orop$5pa@ra.isisnet.com>
Source record: 234527

Hf is not to crowded, it is just that HAMS will will not stay in their own band space... As a Ve we have a band PLAN but who is looking after it?
I work only cw and on low power, this is hard to understant by some hams and the QRM is bad.
So my comments to the VEs is to stick to the band plan and we all can do what we want to do...
This is my first time on the big screen and I love the chanch to air my viaws.

3127. Re: The good old hamdays.

Newsgroup: rec.radio.amateur.misc

Message-ID: <49ot1k$5pa@ra.isisnet.com>
Source record: 234528

As a ham of 18 years I may be concidered young, that is air time not age.
But I have something to say about the new age...
There is a time and a space for all hams,and I want to share it with
all.
I use only Cw and am proud of my ablities in this mode but I am just
as happy to chat to some new ham on 2 meters.
All I ask is that the hams new and old keep the band plan in mind, you
mind your space and I will mind mine...
This is a hobby and not a hores race or I'm louder than you contest.
So my fello hammers(new phrase) let us all enjoy the hobby that we
have choosen. 73s.

Ha Ha Ha Ha!!...Mama Mama Mama...Drew you sound more and more like Jesse Jackson
and Al Sharpton every day...the only thing you know how to throw is self
pity and bull. You are such a laughable joke my sides are splitting
A number of us had a big laugh after I showed them your posts...It's not the
cw question, but how pathetic you are...to say that I'm the one that's whining
shows how out of touch you really are..I could care less what the govt. does
with their regulations..It is not going to change the ideals that I have set
for myself...On the other hand, you personally wish to reduce standards that
hundreds of thousands have attained before you, that obviously are beyond your
ability..based on your rantings it is easy to determine your character..
probably a person that would rather quit than go the extra mile..maybe a person
that has an excuse for everything..C'mon Drew maybe we can find you a new
class of amateur license...something not too challenging like a Donny and
Marie Osmond wireless microphone...Ha Ha Ha Ha!!! KF4DD_M_ what's missing Drew? UB..
Ha Ha Ha Ha!!!

I am interested in experimenting with using Digital Signal Processing (DSP) for the implementation of a HF high-performance amateur-radio receiver. I would like to have everything from after 1st mixer handled by DSP.

Does anyone have any experience or references in this connection. I would need details regarding possible HW solution and algorithms for filtering, demodulation (AM, SSB, CW, SyncAM), spurious signal elimination etc. Are there any good books available that focuses on these problems?

Regards,
Per-Tore

Mike,

I was not exactly sure what you had meant by doing away with the Novice and the Tech license, as long as we "grandfather" those people that already have the Tech license.

However, now I have no problems with your ideas just include some sort of "grandfathering" for us pre-1987 Techs (I am happy were I am at present).

My apologies if I overlooked a comment for your orginial post.

Message-ID: <49t5drhla2@mhafn.production.compuserve.com>
Source record: 234405

Does anyone have experience with RFI being generated by the beam sensors on the new generation of Garage door openers.

I installed a pair of STANLEY ST200 openers and found that the beam sensors cause SERIOUS RFI on 10 meters about every 12 kHz.

I've tried ferrite chokes on the sensor wires, ferrite chokes and AC line filters on the opener motors, all to no avail.

Any ideas? By the way, disconnecting the beam sensors stops the RFI, but then the doors won't work!

>TRUTH IS TRUTH REGARDLESS OF THE SOURCE

Have you ever considered that for some people, ham radio is just a
hobby & not an all comsuming passion ? I have a no code tech license,
probably will not upgrade. It is nice to have the radio, but I only
talk on 2m or 440 less than once a week. I'm not motivated to study
code.

BTW- I am a periodontist (I do gum surgery). Six years of college,
four more in dental school & two more specializing. I lecture
nationally on dental pharmacology (drugs). I write a monthly column
for my state dental association. I have many publications in national,
peer reviewed journals. I serve on committees for both the state
dental association & board of dentistry. I have been invited to speak
at the national meeting next year for the American Academy of
Periodontology. I am a private pilot & fly my own experimental
aircraft. Ham radio is a hobby.

Am I a "lazy, unmotivated, self pitying, entitlement driven loser" ?

Do you think you may have been a little hasty in your generalization
of those with a no code license ?

>There might be some information here that would help us learn code.

When I was going to radar repair school at Keesler in 1972, we had a bunch of "ditty-bop" (not derogatory) students in our squadron. They went through very fast. They used to make me mad because they wouldn't even be passing local water before being shipped out. I do recall one guy having trouble because his typing wasn't good. I think they phased him back to typing and then he returned back to code. I never heard of anyone flunking out, but I'm sure there was. If you flunked out, they made you an Air Policeman, so there was an incentive to learn! ha.

This doesn't come close to answering your question, but brought back some old memories...

>passenger compartment. The battery exploded several seconds after the
>hood was raised. Who manufactured the battery and why did it explode?

The problem with these batteries is that they are prone to hydrogen gas build-up when not properly vented. This is especially true when the

battery is charging. Somehow or another a spark was made when the hood was raised. Possibly metal scraping metal, or maybe a spark was produced when an under-hood lightbulb lit up. Was the guy smoking?

Automobile batteries shoul always be handled with extreme caution and should never be used without proper ventilation. When re-charging these batteries the caps should be removed. It would be a good idea to "fan" the area around the battery before making any electrical attachment to it to disperse the built-up gas.

FOR YOUR PROTECTION, WE ARE A PARTICIPANT IN THE BETTER BUSINESS BUREAU CUSTOMER SATISFACTION PROGRAM !!

- PAGER COST - FREE !!! (retail value is $ 75 to $ 85) Activation is required
at time of order.

- Basic service is just $9.95 per month, billed quarterly.

- No long term contracts or credit checks !

- Special Discount - Accounts who order 4 or more pagers receive a discounted
rate of just $8.95 per month !

- All pagers are NEW and carry a 1-Year Manufacture's limited warranty.

- Pagers are shipped with Black cases. Requests for color cases will be honored, subject to availability and additional cost.
- Minimum pager features include, but are not limited to the following:
Standard Features:

- Local telephone number to access pager
- Digital display PLUS 9 CUSTOM-PROGRAMMED (from your own phone) preformed Alpha messages.
- 18 telephone number memory
- Each call is time stamped
- 4 Tones and silent/vibrate mode select switch
- Basic service covers a radius of approximately 250 miles

Optional Features:

- 800 telephone number access
- Voice Mail
- Dual Area Code telephone access (Same Pager Number)

- Nationwide Paging with 800 telephone number access

- One time activation fee of $37 for programming and phone number selection.

That's why even the negative-IQ federal govenment assigns HF channels at no less than 2.5 kHz increments. Tighter spacings are possible ONLY with much steeper filter skirts than the manufacturers are building into amateur or commercial SSB transceivers.

Now, I 've known three different Dan Newbys so far, and I'm wondering if you are one of them. (One was from Fairview [OH] High School, one from Moto, and one from Southern Company)

>

I just thought of a great way to fix the entire problem--The "V" Chip"...
Yep, the major equipment manufacturers could install the chip in the
transmitter and receiver..If a transmitter senses a word such as poo-poo
or other indecent words it will send out a digital burst..If the receiver
on the other end activates his "V" chip he will reject the transmission..

This should only add an additional $850.00 to the cost of a radio which
should not cause a major impact to the amateur radio community according
to fact finding reports released by President Clinton's top level aides.

Waddya think...I'll have to petition the FCC immediately..maybe I'll
go to the "White House Web Page"...

Mike,
I agree with ever thing you say except the ideas about the Novice and Tech
license. The Novice license IS still needed (let people get their " feet wet
and test the waters"), however, it should be as of old and not renewable. The
Tech license is a step up from the Novice and when I got my Tech (back in '76)
the theory was the same as for the General (which we all know). That should
be brought back and the Tech be a license for those that have the theory.

The General and above would require more theory and regulation testing.

The privileges granted to the Tech and above should be kept as they presently
stand.

Thanks for listening and 73

So your complaint is that hams haven't kept up with current technology?

Whose fault is that?

Do you want the manufacturers to keep making simple obsolete radios so
that hams don't have to learn new things and update their test equipment
when they update their radios?

Perhaps we should never have come down out of the trees?

ka9egw@aol.com (KA9EGW) writes:
>I have seen what no-code did for VHF.

200% increase in activity. Ham radio was dying on the vine prior to restructuring the antiquated coded-license.

If you can find a CW key jack on an Alinco, Icom, Kenwood, Radio-Shack, or whatever, VHF/UHF/SHF radio, I'll say we should go back to the bad old days, and run CW based licenses again.

>Only a fool would want the same for HF.

I have an HF radio. I listen to it. I listen to what is going on and try to decide if I want to participate. Will studying 13 wpm and upgrading, give me pleasure I ask. From what I can tell, the HF bands are a cesspool of the failed Great Society. 1 out of 50 conversations I listen to are interesting, and well done. The rest are retired old white men, who hate all other races, are mostly democrats, and can't stand anything.

It's a non-issue. Real men aren't going to spend $2k to get on HF, code or no code. They may spend $50 to build a CW rig. But SSB is a wasteland. I think the ARRL should abandon all awards. Having done that, it would remove from the bands the awful non-communications bad habits.

I don't think contesting is mindless, althought it makes the bands
very zoo like.

I don't get into every contest, but I do like working field day and
I tried the VHF contest last summer.

For field day every year myself and my friends try something different.

I believe that some of the important aspects of ham radio that I've
learned are as a result of working field day contests for the last
four years.

Next year we're planning on running strictly from deep cycle batteries,
and we're planning on building a human powered generator to recharge
batteries that are not in use.

Subject: How to clean up the ham bands?

In article <49fq8n$cqi@news.cc.oberlin.edu> pruth@ocvaxa.cc.oberlin.edu writes:

> Although I change frequencies when I come across hams using
> profane, obscene language I wonder where, and how, the "self-
> policing" hams are supposed to do comes into play?

<Bill went on to wonder what we can do do clean up the amateur bands.>

I'm not sure there's much we can do about it Bill. I believe the
behavior you see (hear) is but one more manifestation of the dwindling
respect Americans show one another. This is a problem in our public
schools, on our highways and even in our workplaces. I believe this
stems at least in part from the "modern" and "enlightened" mindset
that releases people from personal responsibility.

I'm not one to confront strangers about their anti-social behavior because I worry that instead of counseling a misguided or absent minded person I may be confronting a sociopath. Perhaps other, less phobic persons would jump right in. I KNOW that some equally anti-social people jump in all too frequently.

So what can we do?

(a) Nothing - It's a widespread social problem that will self-correct with Armegeddon.

(b) Confront them on the air - Embarrasing people publicly often works counter to the way you'd expect.

(c) Send them a letter - May work better and you can omit the return address if you're paranoid.

(d) Allocate LOTS more spectrum to the amateur radio service so the chances of encountering one of those lids is smaller.

<Warning - these aren't flame bait but are intended to foster discussion>

(e) Raise the licensing requirements and tax the dickens out of amateur radio in order to make it an exclusive passtime for the gifted and wealthy. Make it as tough as a commercial pilot's license and as expensive as owning a vacation home. I'd fail on both those counts so I'd be off the air but those that DO manage to get on/stay on would treasure their license MUCH more than some seem to do today.

(f) Enact legislation that provides for the creation and empowerment of private industries who's revinues come from the successful prosecution of criminal offenders. Make it a profit center and watch a new industry grow.

(g) Revoke private ownership of transmitting equipment. Permit transmitters only in licensed, taxed, insured club buildings. Place the burden of policing the individuals on their peers who share in the leagal and financial liability.

(h) <any others?>

I'm posting this to ".policy" as well as ".misc" and have added a followup pointing to ".policy". I encourage people to place their followups in ".policy" where this kind of discussion belongs.

I furthermore encourage people engaged it similar policy related discussions to take theirs there too.

>There might be some information here that would help us learn code.

When I was going to radar repair school at Keesler in 1972, we had a bunch of "ditty-bop" (not derogatory) students in our squadron. They went through very fast. They used to make me mad because they wouldn't even be passing local water before being shipped out. I do recall one guy having trouble because his typing wasn't good. I think they phased him back to typing and then he returned back to code. I never heard of anyone flunking out, but I'm sure there was. If you flunked out, they made you an Air Policeman, so there was an incentive to learn! ha.

This doesn't come close to answering your question, but brought back some old memories...

>passenger compartment. The battery exploded several seconds after the
>hood was raised. Who manufactured the battery and why did it explode?

The problem with these batteries is that they are prone to hydrogen gas build-up when not properly vented. This is especially true when the battery is charging. Somehow or another a spark was made when the hood was raised. Possibly metal scraping metal, or maybe a spark was produced when an under-hood lightbulb lit up. Was the guy smoking?

Automobile batteries shoul always be handled with extreme caution and should never be used without proper ventilation. When re-charging these batteries the caps should be removed. It would be a good idea to "fan" the area around the battery before making any electrical attachment to it to disperse the built-up gas.

FREE PAGER FACT SHEET (Prices/Spec subject to change without notice)

FOR YOUR PROTECTION, WE ARE A PARTICIPANT IN THE BETTER BUSINESS BUREAU CUSTOMER SATISFACTION PROGRAM !!

- PAGER COST - FREE !!! (retail value is $ 75 to $ 85) Activation is required
at time of order.

- Basic service is just $9.95 per month, billed quarterly.

- No long term contracts or credit checks !

- Special Discount - Accounts who order 4 or more pagers receive a discounted
rate of just $8.95 per month !

- All pagers are NEW and carry a 1-Year Manufacture's limited warranty.

- Pagers are shipped with Black cases. Requests for color cases will be honored, subject to availability and additional cost.
- Minimum pager features include, but are not limited to the following:
Standard Features:

- Local telephone number to access pager
- Digital display PLUS 9 CUSTOM-PROGRAMMED (from your own phone) preformed Alpha messages.
- 18 telephone number memory
- Each call is time stamped
- 4 Tones and silent/vibrate mode select switch
- Basic service covers a radius of approximately 250 miles

Optional Features:

- 800 telephone number access
- Voice Mail
- Dual Area Code telephone access (Same Pager Number)
- Nationwide Paging with 800 telephone number access

- One time activation fee of $37 for programming and phone number selection.

- In Summary - After activation, the Pager is YOURS to Keep ! - This is NOT a lease ! - At time of order - a deposit is required for the first and last month of service (non-refundable), along with the one-time activation fee, and a $ 3.00 shipping charge. (Grand Total - $ 59.90 - Provides FREE Pager and 2 Months of Service - Each additional month of service is just $ 9.95 per month, billed quarterly)

- Check, Visa, Mastercard, American Express are accepted for payment.

That's why even the negative-IQ federal govenment assigns HF channels at
no less than 2.5 kHz increments. Tighter spacings are possible ONLY with
much steeper filter skirts than the manufacturers are building into
amateur or commercial SSB transceivers.

Now, I 've known three different Dan Newbys so far, and I'm wondering if
you are one of them. (One was from Fairview [OH] High School, one from
Moto, and one from Southern Company)

I just thought of a great way to fix the entire problem--The "V" Chip"...
Yep, the major equipment manufacturers could install the chip in the
transmitter and receiver..If a transmitter senses a word such as poo-poo
or other indecent words it will send out a digital burst..If the receiver
on the other end activates his "V" chip he will reject the transmission..

This should only add an additional $850.00 to the cost of a radio which
should not cause a major impact to the amateur radio community according
to fact finding reports released by President Clinton's top level aides.

Waddya think...I'll have to petition the FCC immediately..maybe I'll
go to the "White House Web Page"...

Mike,
I agree with ever thing you say except the ideas about the Novice and Tech
license. The Novice license IS still needed (let people get their " feet wet
and test the waters"), however, it should be as of old and not renewable. The
Tech license is a step up from the Novice and when I got my Tech (back in '76)
the theory was the same as for the General (which we all know). That should
be brought back and the Tech be a license for those that have the theory.

The General and above would require more theory and regulation testing.

The privileges granted to the Tech and above should be kept as they presently
stand.

Thanks for listening and 73

So your complaint is that hams haven't kept up with current technology?

Whose fault is that?

Do you want the manufacturers to keep making simple obsolete radios so
that hams don't have to learn new things and update their test equipment
when they update their radios?

Perhaps we should never have come down out of the trees?

>I have seen what no-code did for VHF.

200% increase in activity. Ham radio was dying on the vine prior to
restructuring the antiquated coded-license.

If you can find a CW key jack on an Alinco, Icom, Kenwood, Radio-Shack,
or whatever, VHF/UHF/SHF radio, I'll say we should go back to the bad old
days, and run CW based licenses again.

>Only a fool would want the same for HF.

I have an HF radio. I listen to it. I listen to what is going on and try to
decide if I want to participate. Will studying 13 wpm and upgrading, give

me pleasure I ask. From what I can tell, the HF bands are a cesspool of the failed Great Society. 1 out of 50 conversations I listen to are interesting, and well done. The rest are retired old white men, who hate all other races, are mostly democrats, and can't stand anything.

It's a non-issue. Real men aren't going to spend $2k to get on HF, code or no code. They may spend $50 to build a CW rig. But SSB is a wasteland. I think the ARRL should abandon all awards. Having done that, it would remove from the bands the awful non-communications bad habits.

Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner,rec.radio.shortwave,alt.radio.scanner

Hello all,

A friend of mine has a "bunch" of Yaesu Dual Band Radios which he would like to sell at a great price. He purchased them for the emergency response group which he is envolved in and has decided to sell them and get radios which do not have as many functions and features. His policy appears to be "the simpler the better" for emergencies. Anyway, each radio is under 2 years old (some only 4 months old) and comes with the following:

Yaesu FT-530 Dual Band HT
Yaseu Standard 2 Watt Battery
Yaesu Hi-Power 5 Watt Battery
Yaesu Rapid Charger (for both of the above batteries)
Yaesu Standard Battery Charger
Yaesu External Speaker/Mic
Yaesu Standard "Rubber Duck" Antenna
Antenna Specialist's Dual Band "Rubber Duck" Antenna

There are Eighteen (18) Radios, and each of them have had the out-of-band modification done by a local Southern California Dealer at time of purchase. He is asking $460.00 for each radio with the listed accessories in quantities of 5 or more (hoping they can be of good use to an amateur group, etc).

Any interest may be directed to me via e-mail at: asplund@scf.usc.edu

Standards for RF emissions

Standards for RF emissions

With considerable media attention focused recently on the possible effects of radio frequency emissions on humans, little has been said of work being carried out by Standards Australia regarding standards on RF emissions.

Standards Australia TE/7/1 Committee on Standards for Radio Frequency Emissions has been examining the issue for some years. In 1994, Victorian amateur, Doctor Vince McKenna VK3AOY, volunteered to represent the amteur radio community on this committee, on behalf of the WIA.

Dr McKenna reports that this is a joint Australian-New Zealand committee, which includes representatives from the Commonwealth Scientific and Industrial Research Organisation (CSIRO), the Defence Department, Austel, Civil Aviation and the Australian Council of Trade Unions (ACTU). Dr McKenna notes that a New Zealand amateur, Andrew Corney ZL2BBJ, is a committee member.

The Australian Standard AS2772.1-1990 is still the basis for Australian discussion, but an amended draft version for Australia and New Zealand is being discussed.

According to a recent report to the WIA Federal Council from Dr McKenna, the issue of effects of exposure to radiation between 3 kHz and 300 GHz is a highly emotive one, and there is a distinction made between a scientifically measured safe level and a politically acceptable defined level.

Essential factors being considered in setting standards include maximum exposure levels, partial or total body exposure, length of time of exposure, peak field strangths, and critical frequencies.

Dr McKenna noted in his report that, in legislating standards, consideration may be given to cases where there is an element of choice for the individual, and hence personal responsibility -- such as whether one opts to hold a transmitter close to the head (as with handheld transceivers and mobile phones), as opposed to living or working near fixed site installations, such as radio transmitters or cellular-phone relay towers.

A comprehensive report from CSIRO scientist, Dr S. B. Barnett, reported Dr McKenna, lists much of the research that has been and

is being conducted, but it is difficult to find any conclusive evidence from studies undertaken so far. The emphasis of research efforts is now on the effects of RF emission on single cells.

Dr McKenna said that there is presently no requirement for any WIA action and that the needs of the amateur radio community in both Australia and New Zealand are being considered in a favourable and sympathetic light.

From the Federal Media Liaison Officer

Intruder watch

Intruder watch, your help needed

As an active amateur, do you have HF receiving equipment and ten or 20 minutes a week to spend in the shack? Do you care about protecting your hobby?

If you can answer yes to the above questions, then why not translate that commitment into action and look for intruders on our exclusive HF amateur bands?

Persistent intrusions of broadcast, military, diplomatic, utility and other non-amateur services cause interference to legitimate amateur radio operations on the HF bands.

Observing and logging intruders on our bands has never been easier, with the help of the WIA Intruder Watch Service. Reports of intruders, co-ordinated on an international level through the International Amateur Radio Union (IARU), have been effective in removing intruders, especially in recent years.

WIA Intruder Watch Co-ordinator, Gordon Loveday, VK4KAL, needs reports on intrusions to enable action to taken to have the intruders shift frequency out of our exclusive bands. On request, Gordon will forward details to anyone interested in helping Intruder Watch defend our bands against interference from unauthorised users. He can be contacted via his Call Book address.

New directions for Federal

New directions for WIA Federal Council

Among the decision (sic) made at the WIA Federal Council meeting held over the weekend of 28-29 October, was the formation of three Council "Working Groups", each to be convened by an appointed Federal Councillor, to address important issues and activities for the WIA.

The three groups and their convenors are: the Strategic Working Group, headed by WA Federal Councillor Bruce Headland-Thomas VK6OO; the Growth and Retention Working Group, headed by Richard Jenkins VK1RJ; and the Marketing and Advertising Working group,

headed by Bob Allan VK5BJA.

Broad terms of reference and activity plans are being developed to be discussed at the next WIA Federal Council meeting, early in 1996.

The Wia Federal Council also resolved, at the October meeting, to hold only three meetings next year, tentatively scheduled for February, May and October. It has been the policy and practice of the WIA Federal Council over the past five years to hold four meetings throughout each calendar year, one Federal Convention (the AGM) late in the first half of the year (April or May), and three Extraordinary Conventions at roughly quarterly intervals, which have been held usually in February, July and October. The move has been made in line with other efforts to contain the costs of running the Federal organisation.

VK2WI Packet news

DIVISIONAL NEWS

Listeners who submit news items via packet, please note: Barry White VK2AAB , the sysop of the Divisional packet BBS, has implemented a "news server" on the system. The practical upshot of this is that you can now submit your packet news items to:

NEWS @ VK2WI.NSW.AUS.OC

or in most cases, simply:

NEWS @ VK2WI

Your news item will be automatically forwarded to the volunteer who will make sure it ends up in printed form in front of the announcer.

WIA examinations

Divisional news

The last examinations for 1995 will be held at Amateur Radio House, Parramatta, on Sunday 10 December. Applications will close on Thursday 30 November. Candidates should report at 12 noon.

Applications close Thursday 30 November 1995 at 2.00 pm.

--- Eric Fossy VK2EFY, Divisional Secretary

VK2 Bookshop

Divisional news

Reminder -- 4 weeks to Christmas.

The Parramatta office library and bookshop are now open on Saturdays from 10am to 1pm, with lots of ideas for Christmas presents. How about letting the XYL purchase that book you've always wanted!

--- Eric Fossy VK2EFY, Divisional Secretary

VK2 WICEN news

WICEN News

It appears that many WICEN events are not being notified to the Publicity Officer, maybe because no further personnel are required, or perhaps for parochial reasons. The "PR" value of these broadcasts should not be underestimated, especially when the Amateur Radio Service is coming under increasing pressure to justify its millions of dollars worth of radio spectrum; what are YOU doing to help? Will you join the only accredited rescue squad within the Amateur Radio Service, or will you just turn up in your thongs and T-shirt, when the balloon goes up? If it's the latter, then we assure you that the various authorities will have other opinions.

The only event this month (apart from the many events this weekend) is the closing date for the WICEN newsletter on Thursday, to John Howard VK2AMH.

Events next month include the Lion Island Ski Race, run by David VK2UDT, and the Gosford Railway Bridge opening, advised by Andy VK2XRX; both events are on Sunday 10th December.

Those regions wishing to have their activities publicised on this broadcast are requested to get the details to the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to the VK2KFU system itself (AX.25 or TCP/IP), or failing that, to VK2DAA, VK2OP, or VK2GJB.

Incidentally, we note that once again some packet radio messages are not making it to the Publicity Officer, Dave VK2KFU; the "blockage" appears to be somewhere to the north of Sydney, so could those people sending these messages please use a different medium (or perhaps a different BBS), until this problem can be sorted out.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains each Monday at 8.30pm on 7175 simplex, Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, the State-wide HF net each Wednesday at 8.30pm around 3610 kHz, Central Coast each Thursday at 8.30pm on the Wyong repeater 7125, and Sydney each Thursday at 9.30pm on the Chatswood repeater

7150/8275.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

IPS Report
IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(17 NOVEMBER - 23 NOVEMBER)

ISSUED 24 NOVEMBER

SUMMARY

Date 17 18 19 20 21 22 23
10cm 75 75 74 73 73 73 73
A 6 5 7 6 2 4 (3 estimated)
T 27 17 7 -7 10 15 6

SOLAR ACTIVITY WAS LOW ON 17TH AND VERY LOW FOR THE REMAINDER OF THE PERIOD.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS UNSETTLED TO QUIET ON 17TH, AND QUIET FOR THE REST OF THE WEEK.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE ENHANCED TO 15 PER CENT ON 17TH, THEN MOSTLY NEAR PREDICTED MONTHLY VALUES. THERE WAS A SHORT, SLIGHTLY DEPRESSED PERIOD EARLY ON 20TH, AND A BRIEF ENHANCEMENT TO 10 PER CENT ON 21ST, WITH 23RD ENHANCED 15 TO 40 PER CENT. SPREAD F WAS REPORTED DURING LOCAL NIGHT ON 23RD, WITH SPORADIC E PRESENT ON THE SAME DATE.

FORECAST (24 NOVEMBER - 30 NOVEMBER)

SOLAR: VERY LOW.

GEOMAGNETIC: QUIET, WITH BRIEF PERIODS OF ACTIVE LEVELS FROM 28 NOVEMBER.

IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES.

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Heard Is. DX update

HEARD ISLAND DXPEDITION UPDATE

As many of you might be aware, the latest Heard Island Dxpedition has been posponed for about a year, due to what might be termed "organisational difficulties". The following was received from Ralph Fedor - K0IR, via the Internet DX Mailing List:

"As most of you are aware, the Heard Island DX'pedition team ran into difficulty in Australia. As a result, we must postpone the DX'pedition. Upon arriving in Australia, the advance team of

ON6TT and PA3DUU found our charter vessel, the Tallarook, unsuitable for a voyage into the southern ocean. The owner/operator of the Tallarook, a Mr. Kris Mitchell of K & DM Transportation, misrepresented his vessel in the contract and did not outfit the vessel as we had specified. He fled under the cover of darkness with the team's down payment.

"Investigations into Mr. Mitchell's credibility revealed no problems prior to these incidents. Legal limitations on information that can be released shielded Mr. Mitchell from thorough scrutiny during our initial contact with him.

"Legal council in Australia tells us our chance of recovering our down payment is essentially zero. We have, however, contacted the police, the Attorney General of Australia, the Minister of Tourism, and other Australian government officials. Although our loss seems unrecoverable, perhaps our action will shield other visitors from Mr. Mitchell. Save for our contact with Mr. Mitchell, the Australian people and the Australian amateur community have been gracious hosts and saddened by our misfortune.

"Our team at first considered a hurried reorganization and a trip to Heard Island in January of 1996. Securing a ship on such short notice and rearranging our personal schedules has proven unrealistic. We are therefore planning a one year delay in the operation.

"The losses resulting from our encounter with Mr. Mitchell are substantial. They exceed $100,000. However, no contributions sent to The Heard Island Expedition; P.O. Box 163; Waite Park, MN 56387 have been spent. Checks have not been cashed. Contributions will all be returned to those who sent them. In addition, funds from the NCDXF and INDEXA remain untouched. From the beginning I made it clear that the risks of this DX'pedition would be born by the team members. Acceptance of those risks was a prerequisite for becoming a member of the Heard Island team. The same was true of the 3Y0PI team. Painful as it is, the Heard Island team members will honor that commitment and be responsible for the loss.

"While we regret what has happened, we are fortunate in that we did not let the emotion of the moment control our actions and board a vessel that was unsafe. We are all alive and well and anxious to get on with our commitments, all be it a year later. Undoubtedly there will be changes, but team's consensus is to carry on.

"I have doubts that my schedule will allow me to participate in an expedition a year from now. Therefore, I have asked KK6EK and ON6TT to assume the leadership role in developing future plans.

"Thanks to all of you who supported us and encouraged us."

--Ralph Fedor - K0IR, forwarded via the Internet DX Mailing List.

Club news: SPARC

The next meeting of the SYDNEY PROGRESSIVE AMATEUR RADIO CLUB (SPARC) will be held jointly with the AUSTRALIAN MICROCOMPUTER USERS SOCIETY (AMUS).

This will be a special meeting and will involve the auction of the equipment from a deceased estate, and also members' goods. It is anticipated that the SES will have a number of computer systems to dispose of. The auction will be held at the club rooms at 2:30pm on Sunday 10 Decmber. This will replace the normal monthly meeting.

The club premises are located at Middlemiss Street, Milsons Point, in the first arch below the railway line immediately to the north of the intersection of Lavender Street and Milsons Point Road. These are also the SES headquarters for North Sydney.

This meeting will also mark the recent creation of a new limited company to merge the business interests of SPARC and AMUS, to be known as the AUSTRALASIAN COMMUNICATIONS AND COMPUTING ASSOCIATION (ACCA) LTD.

Refreshments will be available for a nominal charge, and all are very welcome.

--Peter Jensen VK2AQJ, Publicity Officer

Club news: HADARC

Hornsby and District Amateur Radio Club

The next meeting of HADARC will be this coming Tuesday 28th Nov commencing as usual at 8pm at the Mt Colah Community Centre, Mt Colah. In addition to the normal meeting and this month's presentation, the WIA will as part of its program to visit all clubs each year will officially visit and bring Hornsby members up to date with the latest happenings in Amateur Radio and more importantly will advise and provide information in the form of a handout about the new regulations which all of us now are subject to!

Caesar VK2TCM will be the representative and he will welcome any questions you might have about the WIA or the new SMA Regulations.

HADARC

Club news: AATC

The AATC will hold the next general meeting as usual on the 2nd Sunday of the month - December 10th at a changed location. The location for the December meeting will be at Bankstown Scout Activities Centre 68 Restwell St - use the back entrance off the large car park area. Note this is the last meeting for 1995 and

the meeting strats at 1.00pm, any body with an interest in ATV - welcome; technical lecture to be finalised and announced next week. Bring the club floppy disc for updates or purchase new one.

Notice to all AATC committee members - committee meeting tomorrow night at Paul's place - Guildford - 7.30 pm - bring floppys.

AATC Inc. Publicity Officer Bob Barnes

Club news: St George

From the St George Amateur Radio Society

The last monthly meeting of the Society for 1995 will be held at the usual venue, that is in the 1st Allawah Scout hall, corner of Bellevue Pde. and Blakesley Rd., South Hurstville at 7.30 pm next month on Wednesday evening the 6th of December 1995.

Guest speaker for the evening will be Rusy Breznik VK2AOT. Rudy will be exhibiting his manufactured range of Emtron linear amplifiers and switch mode power supplies that he has had considerable success in exporting to many overseas countries.

If prompted there is a high probability that Rudy, a long time businessman in our hobby will voice his stong opinion of the future direction of amateur radio in Australia.

Members are reminded that as usual there will be no meeting of the society in January of the new year 1996.

Visitors are always welcome to club meetings, coffee, tea and biscuits are provided and the members look forward to meeting those interested in attending.

from - Allan VK2XF Publicity Officer

VK2 news submissions

If you would like to submit a news item for inclusion in the VK2WI weekly broadcast, you can send it to us by post, fax, packet, or Internet email.

By post to the Divisional office, PO Box 1066 Parramatta 2124

By fax to the Divisional Broadcast Officer, Michael Corbin VK2YC, on (02) 626-6066, or phone him on (02) 626-9288.

By packet mail to NEWS@VK2WI.NSW.AUS.OC (note - new address)

or by Internet mail to wiansw@sydney.dialix.oz.au

Your news items should be received by close of business on the Friday preceding the broadcast; if you're sending printed copy, please print on one side of the page only, double space your text, and use a plain font such as "Arial" or "Helvetica", 12 point or larger, especially if sending your news item by fax.

Please avoid shorthand and abbreviations in the text, and use the exact words you would like the announcer to say when reading your item.

Remember, the clearer the copy, the better your news item will be read.

HEllo again, I am looking for the mod that one has to do to wire the dj160 to
packet. I am using a baycom modem running baycom software.
Currentlt I get a "Whicked" howl when the connection are in place..
I think it is a matter of a resistor here and a capacitor there..
am I correct?
please reply here as well as baack@maine.maine.edu
Thanks, Jason N1RWY

Drew is calling someone else a "whinner"! Interesting. My Granmother used
to have this saying, "Boy thats about the pot calling the kettle black."

Besides, Drew has no evidence or proof of this 'change', nothing more than
his (unfounded) opinion.

He did shop locally. And he was willing to pay extra for the value-added of being able to see it, to talk to a knowledgeable sales rep about it, to see it work. And he was given the same--no, a LESSER--amount of service as you'd get from HRO on one of their 1-800 lines. So--guess what--he can get it cheaper from HRO on one of their 1-800 lines! So let AARS compete with AES, HRO, Jun's, etc and starve on the margins.

As for your "we the consumers" declarations--speak for yourself! I haven't given up on the local store except where the local storekeeper has already given up on me. Advice, support, service--they're important to many of us still, and many of the businesses that provide it are still flourishing.

Any businessman who expects to treat a walk-in customer the same as a caller on a national WATS line shouldn't be surprised when nobody walks back out the door with merchandise in-hand. And he gets no sympathy (or patronage after I hear a few stories like this) from me!

From: pmn@tharp.demon.co.uk (Ron)
Subject: Conversion of Motorola MX 360/330

I hope this is the correct group to put this question. I'm not sure if anyone can help but I an trying to find out whether it is at all possible to convert these walkie-talkies to the 70cm band. I brought a MX 360 out of curiosity. It is the UHF model but I can't tell if it is high or low band (I believe low), but no TX/RX. I think that this particular one was designed for some special use. The guy who sold it seemed to have a lot of them going for dirt cheap and said that the conversion was possible with little difficulty. Though I must say I was rather suspicious. When I tried to get any specifics from him he tried to avoid a direct answer. I also found a MX 330 which is working TX/RX on one freq. (around 455MHz). Any help or info would be really appreciated.

Thanks,
Ronald Newell (N2YSV)

I've done some reading and it appears that in order to operate no-code HF in Japan the operator must operate at no more than 5 watts PEP. I wouldn't want to exchange 95 watts of my Kenwood and 295 watts of my Drake in order to operate no-code. In fact at 5 watts code would be more reliable than SSB.

Just a thought.

From: Mike Whatley <73057.2225@CompuServe.COM>
Subject: No-Code = Affirmative Action

Ron says:

<< I may never learn code - one of the reasons is HF is a
<< don't care in my book. My experience has been that those who
<< adamantly believe code is so important are typically defiencient

<< in their knowledge of modern technology.

As always, No-Coders blame everyone but themselves. They "don't
care" to learn it. OR They call those that support the code as test
criteria as arrogant. OR challenge their opponents "knowledge of
modern technology".

You haven't learned the code because you don't have the "fire in the
belly". You don't want it bad enough. Lethargy comes to mind. Lazy,
complacent, tired.

The issue isn't whether a 19th century mode of communication is
relevant. The issue is *YOU*. And *you* come up short.

Good luck on VHF with your fellow NO-CODE apologists.

**** Want Old Telegraph Keys ****
Hello,
I am looking for old Vibroplex bugs for my collection. Also interested
in off-brand bugs, hand keys and pre-1920 telegraph instruments. Will
purchase or trade my duplicates. Email for my list of duplicates for trade.

>locator be considered an athletic event ???????
>
>N1MSV

Yep Gareth,

contesting IS a kind of sports event. Of course it differs from
a 100yard sprint during athletic competitions. There are many
other forms of more or less strange sports like chess, shooting,
fishing, car racing to name some popular ones. Contesting is not
popular and other people always consider those activities unknown
to them to be merely idiotic.

You need to be in good physical shape to perform well in a contest.
During last weekend's CQWW I didn't sit on my butt for 10 hours -
I sat there for 42 hours and I had fun!
But I think noone outside contesting will get this...

I once read that the manuals and drawings that describe a 747 weigh
as much as a 747.

: >
: >Note the trimmed newsgroups. Your post WAS a spam.

: No, their yelling back and forth arguing about who's cock was bigger,
: who called who, who fed ex'd what, who's son was a ham, who's annoying
: while they type in all caps.. THAT is spamming. YOUR spamming, telling
: someone the're spamming. Get a life..

A "spam", by net convetion, is a posting to multiple groups - where some of
the groups have nothing to do with the matter of discussion. They are usually,
but not always, of the "make money fast" type crap.

People sometimes continue the spam unknowingly, when they reply to a post
without checking the newsgroups list - and trimming it to the applicable
groups.

Your misuse of the word, to provide more emotional impact (apparently) does
NOT change this meaning.

I was not saying that the others were spamming the net. Far from it, which
you would realize if you bothered to read what I wrote. It is listed above,
since you were polite enough to quote the comment. I even trimmed the groups
to the radio groups - which are the only ones to which this particular
discussion belong.

SB QST ARL ARLB106
ARLB106 PRB-1 clone in MA

A new law in Massachusetts will put the language of the FCC's federal preemption of state and local laws affecting amateurs (PRB-1) on the books in that state when it takes effect next year.

H-2782, a bill in the Massachusetts legislature, was written by ARRL Volunteer Counsel Thomas Carrigan, WA1NVS, in 1992. The bill was passed by both chambers of the legislature earlier this year, then sent back to the legislature by Governor William Weld, for modification. Both chambers of the legislature then enacted the bill in the last week of this year's legislative session and sent it to the governor, who signed the bill into law on November 21.

The bill becomes law 90 days after signing, and is assigned to Chapter 225 of the Massachusetts General Laws.

Eastern Massachusetts ARRL Section Manager Phil Temples, K9HI, said ''Like PRB-1, the new Chapter 225 does not give amateurs a green light to do anything they want to do with their antennas. You are still bound by the zoning laws of your city or town, and you will still have to go through the same process for approval that you have to go through now.

''So what's the difference? Now, when you go to your town hall, you can point to Chapter 225 as requiring that local regulations be reasonable. If you should find it necessary to go to court for satisfaction, you can choose state court or federal court. State court trials would be less expensive, but the precedents set in PRB-1 cases do not transfer to Massachusetts courts,'' Temples said.

Carrigan has written a primer for Massachusetts hams on what the new law means. It is available on the World Wide Web at http://www.ultranet.com/~shawn/wa1nvs.html

Temples also suggested that Massachusetts amateurs who contacted their representatives and senators in support of H-2782 now send a note thanking them for their support.

Who the heck is attacking scouts? My wife is a Girl Scout leader!!
I was giving it as an example, if the scouts can learn something
that is not a daily requirement...then Drew can learn the code..
either could come in handy one day...Try to read a little more
carefully next time...I went all the way to Eagle Scouts and my son
is in the Boy Scouts and my daughter is in the Girl Scouts!!!!!
Hopefully you now understand what I was saying..Learning the code
in the Cub Scouts is what led me to get my ham license in the first
place...

My understanding is that knowledge of the code is required
by international treaty. The idea is that any government giving
a license to operate on HF must require the licensee to know at least
some Morse. I think it's still a good idea, though I can understand
why people who live in countries where keeping a complex rig running
is a comparatively simple matter would not.
Like it or not, a CW transmitter is STILL much simpler to
keep running than for any other mode; while there are some people
for whom digital technology functions reliably (because they can
go to a store, order a part, expect that it will arrive, and that
they will pay a price they know in advance when it does), there are
others for whom it does not.
The original idea of the treaty (so I remember hearing
someplace) was to maximize the chances that in an emergency someone
who had only the most rudimentary equipment could be understood
and get help. Is this concern also out of date?

I heard Mike Whatley (73057.2225@CompuServe.COM) say:
: <<The American ham community is a fairly representative subset of
: American society as a whole.>>

: *WRONG* Ham radio's demographics are extremely narrow.
: Overwhelmingly white men over 40. Statistically speaking there are
: few women, and fewer minorities.

: Ham radio is an institutionally racist hobby. Hardly diverse.

I was thinking more in terms of character and personality than race or gender, as my other comments should've indicated.

Race or gender imbalance in the American amateur population is a non-issue of roughly the same magnitude as race or gender imbalance in the ranks of stamp collectors or cat breeders: it just doesn't matter.

Well, get a piece of wood the same length as your window is wide, drill a hole through the wood, run your coax through, solder on a connector, place the wood in your window, close the window down on the wood, and then seal the slight hole in the wood with something like silicon caulk.

As an aside if you don't live on the third floor or so, window locks that prevent the window going up anymore are a very good idea to discourage unwanted visitors entering through the window. 73 de N8BLK/1

>knowledge and/or skills is desireable.
>
>What recommendations would you make for changes in the
>testing and licensing structure for licensees in the US
>Amateur Radio Service?

1.) Test with more emphasis on FCC rules and regulations. It's a real shame when a Technician class ham believes that he can transmit on 10 meters without upgrading.

2.) Require fewer questions involving calculations, all too many people memorize them anyway apparently. As an aside, the math isn't all that complicated on any of the exams.

3.) Have only two classes of licenses, similar perhaps to the Canadian system without any need for code. Basic would be limited to only certain frequencies.

4.) Have as a substitute for a significant portion of the exam, for example, someone who can build a working somewhat complicated kit (receiver perhaps) under supervision or as part of a class for hams might automatically have 30% correct. Or, someone who has passed one of the exams dealing with technical considerations (SBE for example) might only have to deal with regulations, and 10% of the technical material.

5.) Require real knowledge of how things like oscillators, mixers, amplifiers and let's say impedance matchers work rather than something that's easily memorized. As an aside, it's possible to design a multiple choice test that can't be memorized even with the answers readily available. Of course, it would require increasing the size of the question pool, and then producing questions that are similar with the same facts but a slightly different slant.

6.) Make the basic exam something that an 11 year old can pass. Ham radio needs lots of youngsters even if they can't afford everything in QST, CQ, or

any of the other amateur magazines.

As a final comment, I noticed looking at the prices for used and new gear, that few young people can actually afford to enter amateur radio unless they have parents who are interested too. It's hard for example to see an 11 year old with at least $800.00 for a decent new HF rig (Like Ten Tec Scout with a couple of bands), and not many retirees are going to buy a Kenwood TS-870 if they have to watch what they spend. It might be useful to come up with cheap circuits that newcomers could build in modules as they could afford it.

I think you may just be hung up on the names. If no-code HF comes, we only need one beginner's license. The Novice written alone is much too simple for this, so make it the Tech written (with more HF questions added). That's the entry license, whatever it's name, and it should have a limited term. The next license needs to have more meat (as you realize, given your comments about the "old" Tech). I'd suggest something at around the Advanced level. That should be the basic "permanent" license.

[ANARTS - Australian National Amateur Radio Teletype Society]

A.N.A.R.T.S. News Bulletin 886 26th November 1995

SARTG Amtor contest ends

Sad news in the IDRA Digital Journal that the last SARTG Amtor contest has been held, due to decreasing interest in this event.

However the SARTG will continue with its RTTY contests, as, it says, the ever-increasing number of logs demonstrates that the RTTY mode is still the most popular one for the contests.

ANARTS meeting

The next meeting of ANARTS will be on Friday 1st December at the usual venue. Contact Col VK2CTD QTHR for further information.

All welcome

TARA RTTY Sprint rules

9-10 December 1995

Contest Period: from 2100z Saturday to 0100z Sunday (4 hours).

Modes: RTTY only

Bands: 80, 40, 20, 15, and 10m

Classes: A) Single op, all band
B) Less than 150W output
C) More than 150W output
D) Multi-op, single transmitter

Exchange: USA stations send RST plus state
Canadians send RST plus province
All others send RST plus QSO nr.

Multipliers: each USA state, DXCC country, and each Canadian province, plus VE8 and VY1

Notes
Multipliers count only once, not once per band.
KH6 and KL7 count as DXCC countries only
USA and Canada do NOT count as DXCC countries

QSO points: Count 1 point per QSO
Final score: Total of QSO points x total of mults.
Deadline: Logs must be received by January 17th.

Mail to:
Bill Eddy, NY2U
c/o TARA, 2204 22nd St
Troy NY 12180

NOTES OF INTEREST:
Heard Island, VK0. According to a report from Ralph, K0IR, the owner/operator of the "Tallarook", misrepresented his vessel and the advance team found the charter vessel unsuitable for the voyage. Ralph also stated that the voyage is now postponed for a year. KK6EK and ON6TT have assumed the leadership role in developing future plans.

Kerguelen, FT5. According to reports, FB1LYF will be signing FT5XL for one year, CW,SSB and RTTY.

Crozet, FT5. Jean Jacques and Samuel, F5SZK and F5IJT, will be signing FT5WF and FT5WG from Crozet, December this year until February 1997.

THE VK2SG RTTY DXNOTES are also available on Internet at reflectors dx@ve7tcp.ampr.org, and digital-dx@st.rim.or.jp. See also the OH2BUA WebCluster at URL http://www.clinet.fi/~jukka/webcluster.html

For next week's bulletin send your bandpass to Jules, W2JGR, at W5KSI.#NOLA.LA.USA.NA

REMEMBER, DX DON'T SLEEP.

ARLD058 DX news
November 16, 1995

This week's bulletin was made possible with info provided by Tedd, KB8NW, Jean Michel, F6AJA, John, W4VOS, Tom, K8LA, and Contest Corral from QST. Thanks to all.

ANGOLA, D2. YO3YX is active from a UN hospital as D2/YO3YX. Check 21273 kHz between 1700 and 1830z or 14226 kHz around 2030z. QSL via YO3YU. YO9CWY/D2 is a UN related operation and is expected to be active for several months on all bands.

PHILIPPINES, DU. Martti, OH2BH, and Olli, OH0XX, will operate multi-single from the QTH of DU9RG in the CQWW CW Contest.

TUNISIA, 3V. Andy, DJ7IK, Hein, DL2OBF, and Felix, DL8OBC, will be active in the CQWW CW Contest. They will operate multi-op, single transmitter from club station 3V8BB in Tunis. Hopes are to be on the air one or two days before the contest. Every QSO will be confirmed with a QSL card via the bureau. If you can not wait for your bureau card, QSL direct to DL2OBF.

MADAGASCAR, 5R. Ray, 7P8SR, is going to 5R8 after he leaves Lesotho, though does not expect to be active until April 1996.

KENYA, 5Z. After his activity in Seychelles as S79JD, F2JD, will be in Kenya for 10 days in early December. He hopes to use his previously issued call, 5Z4JD. QSL S79JD via F6AJA.

MADEIRA ISLAND, CT3. Listen for the following stations in the CQWW CW Contest November 25 and 26. On 160 meters, CR9X. QSL via DK8WF. On 80 meters, CT3FN. QSL via HB9CRV. On 20 meters, CR9U. QSL via DL2HYH. All three will be active before and after the contest starting around November 16 and ending on the 31st. Listen for CT3/DL2HYH, CT3/DF5AN, CT3/DK8WF and CT3/DL4ZBI.

TOBAGO, 9Y. Bernd, DL1VJ, will operate single op all band in the CQWW CW Contest from Tobago Island, IOTA SA-009. No call sign has been mentioned as of press time.

GUYANA, 8R. Erik, WZ6C, should be signing 8R1ZG soon. Plans were to be QRV in mid-November.

EL SALVADOR, YS. Tom, K8LA, will sign YS1ZTM November 18 to 28. Activity will be all CW. He has an R5 for 20-10 meters but will try to get on 80, 40 and 30 meters. Tom will also do a low key operation in the CQWW CW Contest.

COMING EVENTS

DECEMBER 9TH-20TH TARA RTTY SPRINT

JANUARY 6TH-7TH ARRL RTTY ROUNDUP

FEBRUARY 10TH-11TH WW RTTY WPX CONTEST

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President(Col) VK2CTD at VK2DAA, or the Secretary (Pat) VK2JPA at VK2WI.

News items may be sent to Broadcast Officer PO Box 60
Blacktown 2148 Australia, or by packet to VK2JPA at VK2AAB.
Email address for the Broadcast Officer is :

patl(at)pitt.conmusic.su.oz.au
or
patl(at)extro.ucc.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 03/2330Z DECEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 03 DECEMBER AND FORECAST FOR 04 DECEMBER - 06 DECEMBER

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 73/9

GOES satellite data for 02 Dec
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA
X-ray background: A0.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
04 Dec 05 Dec 06 Dec
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 04 Dec: 73/9

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 02 Dec
Learmonth 7 2112 3222
Fredericksburg 6 14
Planetary 6 11

Observed Kp for 02 Dec: 3233 3321
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
04 Dec 10 quiet to unsettled
05 Dec 7 quiet to unsettled
06 Dec 5 quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

03 Dec Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
04 Dec Normal Normal Normal
05 Dec Normal Normal Normal
06 Dec Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
03 Dec 7

Observed Australian Regional MUFs:
Townsville: near predicted monthly values with blanketing
sporadic E 01-02UT.
Sydney: near predicted monthly values with some spread F
during local night and regular sporadic E observed.
Hobart: near predicted monthly values with blanketing
sporadic E observed at 14UT.

Predicted Monthly T index for December: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
04 Dec 5 near predicted monthly values
05 Dec 5 near predicted monthly values
06 Dec 5 near predicted monthly values

Interesting, but in my neck of the woods, spam is exclusively used to
describe cases of a single message being send separately to several groups
under separate Message IDs. And we call the use of excessive and
inappropriate cross-postings velveeta.

>let the guy make a living.

He did shop locally. And he was willing to pay extra for the value-added of being able to see it, to talk to a knowledgeable sales rep about it, to see it work. And he was given the same--no, a LESSER--amount of service as you'd get from HRO on one of their 1-800 lines. So--guess what--he can get it cheaper from HRO on one of their 1-800 lines! So let AARS compete with AES, HRO, Jun's, etc and starve on the margins.

As for your "we the consumers" declarations--speak for yourself! I haven't given up on the local store except where the local storekeeper has already given up on me. Advice, support, service--they're important to many of us still, and many of the businesses that provide it are still flourishing.

Any businessman who expects to treat a walk-in customer the same as a caller on a national WATS line shouldn't be surprised when nobody walks back out the door with merchandise in-hand. And he gets no sympathy (or patronage after I hear a few stories like this) from me!

>something like that, implying the 241 is a dual bander.

My December 1995 QST has an ad for the TM-733A on page 175. The 733 is
in fact a dual band transceiver.

First and foremost, make a *substantial* question bank that cannot be purely memorized in less than a week, questions, answers and all, without knowing the material that underlies the questions. Even better, allow a group of questions to be custom-generated for each test with a computer by changing circuit parameters, so that NO specific Q and A has been seen and memorized without understanding of the material.

Second, get the material in line with today's technology. Digital comm should be moved to entry level testing and increases in the breadth and depth of this knowledge should be integral to every test thereafter. Incorporate the basics of DSP, advanced modulation techniques--keep us near the cutting edge, if not in our equipment at least in our technical knowledge.

Bob

3184. Re: PACKARD BELL >>WILL<< SCREW YOU!!

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-04 00:00:00 UTC
From: Gareth Crispell <stranger@ccsnet.com>
Message-ID: <49tm2n$2s8@alterdial.UU.NET>
Source record: 234435

I was having a problem with a 4 month old Packard Bell 17" monitor. I called PB and spoke with a Tech.(it was very difficult to get thru) He felt the monitor should be replaced and within 2 weeks a brand new 17" monitor was delivered to my house and the old one was taken away. Maybe I was lucky, but I thought that was pretty good service since I live in the Northeast.

>of vehicles all over southern California.

Vehicle locating systems, and all of the unlicensed part 15 systems and
amateurs all secondary users of 902 to 928. The government is THE
primary user. High powered, airborne radiolocation is a common
government use for this spectrum. The secondary users have to live with
any interference, and not cause any to the primary user.

Military radar is just something you have to deal with on 900.

[ANARTS - Australian National Amateur Radio Teletype Society]

A.N.A.R.T.S. News Bulletin 887 3rd December 1995

ANARTS meeting postponed

The next meeting of ANARTS has been postponed to Friday 8th December at the usual venue. Contact Col VK2CTD QTHR for further information.

All welcome

Enod-of-year Brodcast date

The last ANARTS broadcast for the year, at this stage, will be on 17th December. Volunteers will put together the last one for the year as your Broadcast Officer will be on leave. Watch next week for the resumption date for 1996.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(24 NOVEMBER - 30 NOVEMBER)

ISSUED 01 DECEMBER

SUMMARY

Date 24 25 26 27 28 29 30
10cm 72 72 73 71 73 72 74
A 2 2 1 21 8 14 (14 estimated)
T 8 10 4 24 -4 22 30

SOLAR ACTIVITY WAS VERY LOW THROUGHOUT THE PERIOD.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET 24TH TO 26TH NOVEMBER, INCREASING TO MOSTLY ACTIVE TO MAJOR STORM LEVELS ON 27TH. THE FIELD WAS QUIET TO UNSETTLED ON 28TH TO 30TH, WITH A BRIEF ACTIVE PERIOD ON 29TH.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE NEAR PREDICTED MONTHLY VALUES 24TH TO 26TH NOVEMBER, THEN 15 TO 30 PER CENT ENHANCED EARLY ON 27TH, BECOMING DEPRESSED TO 30 PER CENT AFTER 1700 HRS UT. FREQUENCIES WERE AGAIN DEPRESSED TO 20 PER CENT DURING LOCAL DAY; AND NEAR PREDICTED MONTHLY VALUES 29TH

TO 30TH NOVEMBER. SPORADIC E WAS PRESENT AT TIMES DURING LOCAL NIGHT.

FORECAST (01 DECEMBER - 07 DECEMBER)

SOLAR: VERY LOW.

GEOMAGNETIC: QUIET TO UNSETTLED, WITH POSSIBLE ISOLATED ACTIVE PERIODS 01-04 DECEMBER.

IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES.

COURTESY OF IPS RADIO AND SPACE SERVICES

RTDX1201 RTTY DX

VK2SG RTTY DX NOTES FOR WEEK ENDING 1 DEC 1995 (BID RTDX1201)

Next weekend is the TARA RTTY Sprint. This is a four hour contest starting Saturday, 9 December at 2100Z and ending at 0100Z Sunday. For details see the Digital Journal, November 1995, page 18. See also the WWW page of the Troy Amateur Radio Association at URL http://wizvax.net/spectrum/rtty.html Rules are the same as the ARRL RTTY Roundup, so you can use your WF1B RTTY contest program. Good luck in the contest. Have fun!

Our information this week came from DJ3IW and the Central Europe Cluster DB0SPC, I5FLN and the IK5PWJ Packet Cluster, K1BV, OH2BUA, VK1FF/WB2FFY, WB2CJL, W5KSI, WS7I,, ZS5S, 425 DX News, and the NJ0M node of the Minnesota Packet Cluster Network. Thanks to all for your help.

Notes of Interest:

SPECIAL EVENT STATIONS -
VI100GM will be aired by the Wireless Institute of Australia 5-11 December to commemmorate the 100th anniversary of Marconi's first wireless experiments. Look for it on RTTY, CW and SSB (plus a special EME demonstration on 11 December between 1800Z and 2330Z on 70 or 73 cm.) QSL to VI100GM, GPO Box 600, Canberra, ACT, 2601, Australia.

SP0TPAX will be active 1-15 December, on all HF bands, on CW, SSB, and RTTY, to commemorate the 70th anniversary of the first amateur radio contact in Poland performed by Polish amateur Tadeusz Heftman (TPAX), and Dutch amateur Ten Kate (N-OPM). QSL directly via SP2FAP, or directly to the "QTC" magazine at P.O. Box 18, 82-312 Elblag 13, Poland.

BAHAMAS - From 2-10 December, N2MQI, WG3I, G3NYY, and G4VXE will operate /C6A, CW and RTTY from New Prvidence Island. QSL WG3I to G3AUA, others to home CBA.

BRITISH VIRGIN ISLANDS - Jay, VP2V/WB8ZTY will spend his honeymoon, and operate radio from Peter Island 1-12 January 1996. He plans both RTTY and SSB every day. Equipment will consist of a Yaesu 890, HAL PCI-4000, and a Butternut vertical. Look for him in the ARRL RTTY Roundup January 6-7. QSL to his home CBA.

The VK2SG RTTY DX Notes are also available on Internet at reflectors dx@ve7tcp.ampr.org and digital-dx@st.rim.or.jp See also the OH2BUA Webcluster at URL http://www.clinet.fi/~jukka/webcluster.html

For next week's bulletin send your bandpass and notes of interest to Luciano, I5FLN at ZS5S.ZAF.AF

73 es good hunting de Jules W2JGR at W5KSI.#NOLA.LA.USA.NOAM

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 231
Excerpts
November 19, 1995

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N3ADL, K4CEF & Southeastern Cluster Group, AA4LI, WD5N, KT6V, NM7M, K8PYD, NW8F, W9VNE, K0IR, DF4RD, DL3DXX, EY8MM, JA1BK, JA6VZB, JH1ORA, ON6TT, VE9RHS, NPDXG News Bulletin and G4BUE & The DX News Sheet for the following DX information.

4U/KC0PA CARD UPDATE. Rudi, VE9RHS, reports he has finally received the logs from Tim (4U/KC0PA). Tim's computer is still down, but he has managed to retrieve the logs after a lot of monkeying around with the machine. Rudi mentions that he has crashed his system, but has managed to get his machine to copy the logs to paper. He is now in the process of trying to clean up the back log that he has on hand. There is at least a 1500-2000 card back log, so it will take a few weeks to catch up, and he is hopeful that some cards would be going out this past weekend. So please be patient; all cards will be answered ASAP.

9L, SIERRA LEONE. Paul, 9L1PG, is currently stateside on vacation until December 15th (on or about). Paul bought a new rig and a amplifier to take back to Freetown with him. Also, Cecil, NW8F, has sent antennas for 80-40 and 12 meters which should arrive the same time Paul does in Freetown. So begin looking for 9L1PG on the low bands in mid-December.

FT5, KERGUELEN. FT5XK has been heard active on 20 meters SSB working Europeans on 14136 kHz around 1600z. QSL via F6KQD. According to the NPDXG News Bulletin, FB1LYF will staying for one year on the island and that he will be using the callsign

FT5XL. His expected activity of operation will be CW , SSB and RTTY.

HP, PANAMA. Ellis, AA4LI, will be active as AA4LI/HP1 the first two weeks in December. He will concentrate mostly on CW operating on all bands. His activities will be limited to the evening hours (probably from 0200-05000z) daily, because he will be working during the day.

"OD5ZZ & OD5RAK" QSL, WHERE ARE THEY? Dwaine, WA8MEM, reports he was supplied with a certain amount of QSL cards by Walid, OD5ZZ, and has apparently run out. Dwaine talked with Walid in early 1995 and told him he was out of cards and needed log sheets to confirm cards. Walid stated that he would be sending Dwaine some more cards for OD5ZZ and OD5RAK plus certificates to send out for the OD50RAK special event. Since then Dwaine has been trying to contact Walid again by phone and InterNet, but with no success. Dwaine has now announced he will no longer be the QSL Manager for OD5ZZ, OD5RAK and OD50RAK because he has run out of time and patience. Stations that sent Dwaine return envelopes and postage will be getting their cards back soon. All other stations that sent their cards via the bureau will have to resend them again once a new route is announced. Dwaine wants to thank all the DXers for their patience and is sorry that he couldn't provide a card for those who needed it for a new one. As a DXer himself (Dwaine) states he knows how it feels not to get a card that you need for a new one.....

P5, NORTH KOREA. The DXNS reports that there is a rumor floating around stating that Zorro, JH1AJT, has a licence to operate.

TU, IVORY COAST. Peter, ON6TT, will be leaving on November 21st for TU on a 4 week Red Cross mission. He did not state what call sign would be used, but he did mention most of his equipment is still in VK6-land so do not expect too much activity during this mission.

VH0, MACQUARIE ISLAND. Recently, reports of a station signing VK0MI, which claimed to be active from Macquarie Island, turned out to be the work of a pirate. But good news was reported by Bob, NM7M, who talked to Greame, VK0GC, and states VH0WH, Warren Hull, will be arriving on Macquarie around the end of November and will be there for the full year. You may recall Graeme from earlier SSB operations on the island.

SPECIAL NOTE FROM EDITOR: There will probably be no bulletin next week (November 27th) due to the contest and holiday weekend. Please keep sending your DX information. (You never know, I may put one together if I receive enough information before the weekend.)

Excerpts and distribution of The OPDX Bulletin are granted as
long as KB8NW/OPDX/BARF80 receive credit.

COMING EVENTS

DECEMBER 9TH-10TH TARA RTTY SPRINT

JANUARY 6TH-7TH ARRL RTTY ROUNDUP

FEBRUARY 10TH-11TH WW RTTY WPX CONTEST

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065
Australia, for such matters as membership and general
enquiries. Enquiries can also be made by packet to the
President(Col) VK2CTD at VK2DAA, or the Secretary (Pat) VK2JPA
at VK2WI.

News items may be sent to Broadcast Officer PO Box 60
Blacktown 2148 Australia, or by packet to VK2JPA at VK2AAB.
Email address for the Broadcast Officer is :

patl(at)pitt.conmusic.su.oz.au
or
patl(at)extro.ucc.su.oz.au

The Society welcomes news items on any digital subjects from
anywhere in the broadcast coverage area. We are looking for-
ward to news from your areas to let other amateurs know what
you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer

Hello,

I have a pair of the Motorola ht440 model h24lcu3144an ht's
that I am wanting to change the crystals on. I would like
some information on the crystals and on how to re-tune the radio.
Thanks in advance.

3189. Re: Cable Routing to Outside

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-04 00:00:00 UTC
From: Dave Nulton <dnult@axiom.net>
Message-ID: <49tv12$rir@atlas.axiom.net>
Source record: 234440

Aside from the window trick, I can't think of a way to get a wire outside without leaving a hole. Here is what I did.

I purchased a standard size electrical outlet box. I drilled a 1 1/4" hole in the back of the box. I cut a hole in the sheetrock for the outlet box and drilled a 1 1/4" hole in the exterior wall. I then cut a short piece (approx. 4" long) of PVC pipe that would fit in the box and exterior hole. On the outside of the house, on the protruding pvc pipe, I added a 90 degree PVC fitting.

Once the box is mounted securely you have a mighty fine cable pass through. If ever the ham shack is moved a solid plate can be installed. Stuff the pipe full of foam rubber to insulate from wind and bugs. You can even paint the outside fittings the color of your house.

>1.) Test with more emphasis on FCC rules and regulations. It's a real shame
>when a Technician class ham believes that he can transmit on 10 meters
>without upgrading.

Not a bad idea, I guess, though a tech who thinks that isn't
familiar with the matierial that's already there.

>2.) Require fewer questions involving calculations, all too many people
>memorize them anyway apparently. As an aside, the math isn't all that
>complicated on any of the exams.

I prefer the other approach--allow the values to be varied
within reasonable limits, but maintain the same format for the
questions (for instance, you'll know that Ohm's law will be used, but
you won't know what numbers will be used). "Reasonable limits" would
preclude correct answers of 18 THz or 79 gigawatts, which could
confuse some people (since those values aren't used much in ham radio)

>5.) Require real knowledge of how things like oscillators, mixers, amplifiers
>and let's say impedance matchers work rather than something that's easily

Good idea...

One thing I was just thinking of involves, essentially, a
number of separate mini-tests. Currently, you can completely fail one
(or more) sections of an exam, yet still pass it. Perhaps it would be
a good idea to break the exam into FCC rules, station design,
electronic theory, etc., and require 70% or better on each section.
This would, I think, greatly reduce the techs who don't know that 10m
is off-limits, for instance.

I don't understand this enthusiasm for a time-limited entry license. First of all, do you really mean once only in a lifetime? I.e. if somebody gets the entry license and then, due to some unforseen circumstance, never upgrades within the term, they can NEVER try again? Seems awfully harsh. After all, even a felony conviction doesn't prevent somebody from getting a entry level license, why should simply failing to pass a test within a time limit do so?

Further, what harm is there in someone staying at the entry level indefinitely? Formal training organizations (the military, universities, etc.) have time limits because somebody "in the system" is consuming scarce resources merely by being there -- somebody not making sufficient progress is taking a slot that could be allocated to somebody else. Who, other than the person involved, is hurt by somebody staying at the entry level for a while? Who, other than the person involved, has all the information to make the tradeoffs between time spent on what, after all, is a hobby and time spent on the rest of their life?

3196. Monitor emissions

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-04 00:00:00 UTC
From: ronab6zx@aol.com
Message-ID: <49vpag$pgf@newsbf02.news.aol.com>
Source record: 234447

My new monitor is generating significant hash nearly accross the HF spectrum. At 3.8 Mhz it reaches 1-2 S units; at 7 Mhz it is more than 2 S units. The emissions are from the monitor. Removing the the CPU video cable does not affect the level; same with powering down the CPU.

After 41 years of logging contests by hand I would like to try computer logging. However the monitor emissions really wipe out the weak ones. Any suggestions?

: >music for a minute or so. Had to check that I had tuned 3.88 MHz
: >instead of 27.something it was so bad.

: The reason this frequency sounded like CB is because the operators
: you heard were CBers. They are CBers who just happen to have an
: amateur license, but they are not hams. Hams don't act that way.

Don't lump all CBers with the occasional idiot you find on the ham bands.
Both groups have their losers, and both groups have some excellent and
very knowledgeable people.

I personally suspect that the practical knowledge required for advanced
tickets is essentially zero. It is not that hard to memorize the questions
and proper answers. I know a recent Extra licensee who has never picked
up a soldering iron, and couldn't draw a simple oscillator circuit if he
had to. His operating ability comes from a box that has no-tune finals
and a built in autotuner. As long as he has the commercially built antenna
hooked up to the rig, all he has to do is turn it on, tune to the frequency
he wishes to use, and transmit.

He was able to receive the code at 20 wpm, when he got his license, but
now cannot even manage 13. He cannot even transmit decently at 10 wpm,
as he has never used CW.

Now, this is an extreme example, but still illustrates my point very well.
It is the person who makes the Ham or CBer, not what tests they pass or
don't pass.

From: benjy@benjy.cc.vt.edu
Message-ID: <49v3a3$8p9@solaris.cc.vt.edu>
Source record: 234457

I wonder if anyone has noticed missing calls from the
RAC (Radio Amateur Callbook) CD-ROM? I worked
5V7AA over the weekend. He gave his manager as HH2HM.
HH2HM is not in the CD-ROM, but it is in my 1995
printed callbook. I also found a G0 call that is
not in the RAC CD-ROM, but is in the QRZ! CD-ROM.

So, I know that not all calls are published, and I suppose
someone who is in the 1995 callbook may decide not to have
his call published in the 1996 (I guess via the government
agency for the particular country). So, I'm just wondering.
Anyone notice calls missing from the RAC CD-ROM that should
be there? Anyone with a 1996 printed callbook (are they out
yet) know if HH2HM is in it?

As of about a year ago, Heath still had the PC boards and the micro used in the Most Accurate Clock. So if one is willing to fabricate a display and supply a receiver, you can still build your own.

The following is a QST

A new statute that protects hams is passed into law in
Massachusetts, a jammer is caught in record time in New Mexico and the
girl scouts do well in JOTA. All this and more on Newsline report
number 955 coming your way right now!

(*****
MASS ANTENNA LAW

Massachusetts now has a PRB-1 like law of its own. It's
literally a Thanksgiving present to the hams of the state.
Phil Temples, K9HI reports that on November 24th the governor
signed into law legislature bill H-2782 which is now Chapter 225
of the Acts of 1995. The text of the new law is simple and
unambiguous. It reads in part as follows: -- quote -- "No zoning
ordinance or by-law shall prohibit the construction or use of an
antenna structure by a federally licensed amateur radio operator.
Zoning ordinances and by-laws may reasonably regulate the location and
height of such antenna structures for the purposes of health, safety,
or aesthetics; provided, however, that such ordinances and by-laws
reasonably allow for sufficient height of such antenna structures.

This so as to effectively accommodate amateur radio communications by federally licensed amateur radio operators and constitute the minimum practicable regulation necessary to accomplish the legitimate purposes of the city or town enacting such ordinance or by-law." -- end quote.

The law goes on to say that nothing in the act shall be construed as limiting the authority of any architectural or historic district commission established pursuant to any general or specific law.
Temples says that he has praise for the efforts of State Government Liaison, Shawn O'Donnell, K3HI, as well as the work by Western Massachusetts Section Manager Dan Senie, N1JEB who spearheaded the new law. Also included in this are the countless amateurs in the Commonwealth of Massachusetts who wrote letters and made phone calls to their congressmen and women, and to the Governor's office in support of the bill.

(*****
CALIFORNIA CC&Rs BANNING SMALL ANTENNAS NOW VOID

Meanwhile, California governor Pete Wilson has signed a measure into law that voids and makes unenforceable lands use Conditions Covenants and Restrictions that prohibit the installation or use of a video or television antennas. This includes satellite dishes measuring up to thirty-six inches in diameter.
AB 104 bill does give associations the right to reasonably restrict or regulate such installations, but directs that any application for an installation must not be willfully delayed.
The new law even allows the award of attorney's fees for the prevailing party in an action to enforce compliance with the bill.
Assembly Bill 104 was written by Assemblyman Dan Hauser and had heavy backing from Pacific Telesis. Interestingly, few if any newspapers or broadcasters reported its passage. In fact the information in this story was first published in Common Interest. This is a legislative newsletter that deals with matters of general concern to California communities.
California hams should not expect to see an announcement of AB 104 in their homeowners association newsletters. Most homeowner associations probably hope that hams and CB operators never hear about the new measure. And it will not be of any help to those hams who want to mount a multi-band Christmas tree array on a 70 foot high tower on top of a condo or townhouse. As stated earlier, AB 104 covers only small antennas designed for receiving television signals and satellite tv. While you might get away with a 2 meter beam, a tri-band array will definitely be subject to challenge.
Our thanks to Gary De Feyter, AC6EG of Santa Maria, and several other California hams for passing this information along.

(*****
THIS WEEK IN AMATEUR RADIO SAT CHANGE

Due to the loss of our access to the TELSTAR 302 commercial communications satellite which is being taken out of service later this year, we have decided to temporarily suspend production of the service after December 2nd.
This Week In Amateur Radio and The Tech Talk Network had been scheduled to move to the Galaxy 6 next week. But those plans have now been abandoned. It may be several weeks till the network can find a suitable permanent satellite home.
For this week the service is being aired on 160 meters at 1860 kHz through the facilities Vern Jackson, WA0RCR and his Gateway 160 meter net. And by repeater affiliates who opt to take a landline feed.
The Albany, New York based amateur radio news service carries ARRL bulletins, contest and convention information, propagation forecast summaries, RAIN and of course NEWSLINE.
This Week In Amateur Radio will return. Probably after the first of the year. Watch your local packet bbs and the amateur radio hobby areas on the internet and stay tuned to NEWSLINE for announcements on the return of This Week In Amateur Radio.

(*****
ARRL ELECTION RESULTS

The 1995 fall ARRL elections are over and the winners all appear to be incumbents. There were only four contested races, with only one that can be called a squeaker. This was in the Midwest Division where Director Lew Gordon, K4VX triumphed over challenger Roger Volk, K0GOB by only 51 votes.
In all other contests the incumbents won by wide margins. All those re-elected will begin their next two year terms of office beginning at noon January 1, 1996.

(*****
IRC FOIA REQUEST

The Indiana Repeater Council has filed a Freedom of Information Act request to the FCC. This, seeking information on the involvement of the regulatory agency in the formation of a single point of contact to the repeater coordination community.
As previous reported, the Indiana group opposes the formation of a single point of contact. Its also against any ARRL involvement in repeater coordination. IRC contends that the idea for a single point of contact came from the American Radio Relay League. It takes issue that the League was merely acting as a facilitator in the formation of such an entity.
Now, in its November 18th filing, the Indiana Repeater Council places a formal demand before the Commission that the agency supply copies of all communications between it, the ARRL and the Mid America Coordination Council dealing with the single point of contact matter from January of 1994 to the present. This includes, among other items, copies of telephone logs, minutes of meetings, and even the expense account Wireless Telecommunications Bureau Deputy Chief Ralph Haller, N4RH, in relation to the October 7th St. Louis Meeting.

The Indiana Repeater Council also appears to be trying to ascertain if any undue influence peddling on the part of the American Radio Relay League or the Mid America Coordination Council took place in the creation of a SPOC. They specifically ask for a complete list of all gifts, regardless of value received by any officer, staff member, Commissioner or representative of the Commission from any officer, staff member, or representative of the American Radio Relay League or MACC.

ALBUQUERQUE JAMMER CAUGHT

Still with repeater news, when an operator calling himself Dave showed up on an Albuquerque New Mexico repeater the weekend of November 26th, his activities immediately aroused suspicions of area hams. Most noticeably, he was using a 7th district call sign that was soon traced to another ham living outside the area. Once it was ascertained that they had a phony on their hands, several base stations began taking beam bearings on the operator they dubbed Jammer Dave. This was enough information for the local transmitter hunting team to deploy. While another local operator kept the bootlegger on the air, the hunters began their work.
It did not take long to locate where the suspect signal was coming from. Ironically, as they were parked in front of an apartment complex suspected of being Dave's location, the bogus operator decided to go out for a walk. As soon as he spotted the beam equipped T-hunt vehicle he panicked and his transmissions stopped. But not for long.
The next day one of the local hams involved in the chase was able to set up a schedule with the intruder for 9 PM. When he showed up, four t-hunt teams were in position. The task was to find the actual apartment. As the QSO progressed, the t-hunters were able to narrow the search right down to the particular room that they believed the offender was operating in. But as luck would have it, at about that time a drug bust was taking place in an adjacent apartment. The hunters wisely called off the operation for the night.
About noon the third day there appeared to be a new problem on one of the major linked repeater systems serving New Mexico. Someone was bringing up the phone patch and harassing the emergency 911 emergency services number and making other unauthorized calls. Again the search quickly took the team back to the same building. There, two of the hunters were able to verify Dave making transmissions as he walked outside the apartments. Two other t-hunters -- one being the trustee of the affected repeater joined in the task of providing positive identification. The whole team watched him as Dave returned to his apartment. Once he was inside, the ARRL Section Manager called the Albuquerque Police Department and the New Mexico State Police Department of Public Safety. Both quickly responded. After reviewing the evidence collected by the t-hunt team, they took charge of the

situation and took Dave, off the air.
The whole process took only three days and says a lot for the way problems like this are handled in the old west.

(*****
NO FM on 50.125 MHz

Using 50.125 MHz for F-M simplex is just plain wrong. So say several packet radio postings aimed at newcomers to ham radio. Amateurs who are buying radios and firing up on six meters without bothering to look at the published bandplan.
FM anywhere from 50.1 to almost 51 Mhz will interfere with other established operations on the band. The biggest problem is from 50 dot 1 to 50 dot 250 where weak signal and DX operators hanging out on SSB.
The difficulty appears to be coming from two sources. First from the manufacturers who fail to include a copy of the national six meter bandplan with their radios. Another cause are the diploma mill ham radio schools who turn out what some are terming as arrogant radio amateurs who have no idea of what ham radio is really all about.

(*****
THE VISIBLE MIR

According to Dave Mullenix, N9LTD, of Easy Sats, something will soon be on the horizon for all ham radio space buffs. Actually, it will be directly over head!
Dave says that its the Russian Mir space station and it will be making visible evening passes over the United States during the Christmas Holidays. These should begin around the middle of December and continue through early January. N9LTD says that the easiest way to find Mir is by using satellite tracking software to see when and where to look for your location.
One caution though. Mir is due to reboost its orbit any day now. That means they'll be firing their rockets to raise their orbit a bit. It usually takes several days for the orbital elements to catch up when this happens. Hopefully everything will get sorted out well before the holidays begin.

(*****
ICARE

From overseas, G3WXH tells Newsline of a historic event in the evolution of Amateur Radio. The formation of I-CARE, first ever World Conference on Amateur Radio in Education has formed -- I-CARE -- The International Council for Amateur Radio in Education.
In the foundation statement, the aims of I-CARE were stated as offering a forum to teachers and students world-wide for the exchange and support of educational projects and methods using Amateur Radio.
The conference was hosted by the UK organization Science and Technology through Educational Links with Amateur Radio.
The first international project was declared to be an

initiative to develop Slow Scan Television based systems in Schools. Coordination was to be achieved via the Amateur Radio in Education magazine, electronic links and future International meetings of the Country coordinators of affiliated groups.
Further details can be obtained from I-CARE, 7 Carlton Road, Harrogate, North Yorks HG2 8DD, England or via the Internet to g3xwh@amsat.org.

(*****
WESTERN USA CHAVERIM

On the social calender, a reminder that the Western USA and Mexico Chaverim Chapter will hold its fifth annual convention in Las Vegas at the Riviera Hotel. The dates for the gathering are December 15th through the 18th. Contact K6AIZ at his Callbook address for more information.

(*****
DX

In DX, 7P8SR in Lesotho has been heard on 15 meter CW. Several reports say that he will be leaving Lesotho in 3 weeks but not give his next location. Right now, he is the only 7P station who is regularly on CW and the lower bands, so if you need this one, don't wait around too long. Check 3.502 MHz around 03:30 UTC, 7.018 MHz around 02:45 UTC and 21.010 MHz around 15:30 UTC.
Closer to home, WB6VGI says he will be returning to KG4 land and he will be active as KG4ML from December 5th to the 12th. W3JT will also be along on the trip but does not currently have a KG4. He hopes to get KG4JT. WB6VGI says that the KG4ML operation will target the WARC bands, while W3JT will be active on all bands. QSL KG4ML directly to WB6VGI.
And effective immediately N1QMM is the new QSL Manager for A61AF. This includes the recent A61AF contest entry in the CQ World Wide contest. Micah expects to get all the logs from A61AF and the QSL cards in the next few weeks. QSL to Micah Greenbaum, N1QMM, 250 Standish St., Duxbury, MA 02332

(*****
JOTA FOLLOW-UP

A couple of weeks ago Newsline reported on a very special station to be on the air during this fall's Jamboree on the Air scouting extravaganza. What made this station different was that it was one of the few where the scouts setting it up and operating would be female.
A few days ago we received some electronic mail from the sixteen year old Allison Zettwoch, KD4CKP. Allison is the girl scout that spearheaded the operation as well as a Youth Forum at a recent Louisville hamfest.
According to Allison, both events went very well. In fact, with 24 youngsters and 8 adults it was the largest turnout of any

forum at the hamfest.
JOTA went even better says Allison. She and her associates set up under a walled pavilion at Camp Crooked Creek just outside of Louisville. Allison says that close to 50 people passed through to see what was going on. One girl got the ham radio bug. She stayed from ten in the morning to nine that night and a provided a lot of assistance to the operators. Allison says that she thinks that another new ham will result.
The Louisville Girl Scout station made numerous contacts including several with other Jamboree On The Air operations, nationwide.

I agree I don't believe the ham bands are the place for fowl language.

Don't get me wrong, I'm no saint, I've certainly spewed my fair share
of fowl language on almost a daily basis. I'll tell you though that
I don't use fowl language on e-mail, snail mail, anywhere on the
internet, on ham radio, on CB when I use to hang out there up until
1990, and in front of my mom.

Also I hear a lot of stories of people talking about how hams on HF
were heard using profanaty. I'm not on the radio on a daily basis
but I've rarely heard any of the profanity some people routinely
complain about.

I tend to agree about this uncontrolled use of fowl language on the ham
bands. I just went out to the salt marsh behind my house and told an
enormous Canadian Goose that the guys were not going to stand for anymore
nasty talk. I think the bugger got the point!!!

As to recent postings on various newsgroups with the contention that cw
operators are incapable of understanding modern technology--I work as a
software v & v engineer on the latest automated blood-products processing
equipment (the stuff the public will see about 1999).
I work cw almost exclusively. At well over 20 wpm. The reason why
is simple--on cw, I don't run into lazy, unmotivated, self-pitying,
entitlement mentality-driven ***losers*** who expect the big, bad world to
give them everything on a silver platter without they work for it.
Expecting to get flamed for this, and not bothered by it--

Sigh... And we wonder why everyone thinks AOLers are idiots.
Yes, truth is truth, even if the source is (as in this case)
brain-dead. However, to quote Polonius, it must follow, as the night
the day, that bullshit is bullshit, regardless of the source.

The determination of the content of the last message is left
as an exercise for those readers with functional brainstems (yes, this
excludes RebelHwy).

He did shop locally. And he was willing to pay extra for the
value-added of being able to see it, to talk to a knowledgeable sales
rep about it, to see it work. And he was given the same--no, a
LESSER--amount of service as you'd get from HRO on one of their 1-800

lines. So--guess what--he can get it cheaper from HRO on one of their 1-800 lines! So let AARS compete with AES, HRO, Jun's, etc and starve on the margins.

As for your "we the consumers" declarations--speak for yourself! I haven't given up on the local store except where the local storekeeper has already given up on me. Advice, support, service--they're important to many of us still, and many of the businesses that provide it are still flourishing.

Any businessman who expects to treat a walk-in customer the same as a caller on a national WATS line shouldn't be surprised when nobody walks back out the door with merchandise in-hand. And he gets no sympathy (or patronage after I hear a few stories like this) from me!

Bob

From: pmn@tharp.demon.co.uk (Ron)
Subject: Conversion of Motorola MX 360/330

I hope this is the correct group to put this question. I'm not sure if
anyone can help but I an trying to find out whether it is at all possible
to convert these walkie-talkies to the 70cm band. I brought a MX 360 out
of curiosity. It is the UHF model but I can't tell if it is high or low
band (I believe low), but no TX/RX. I think that this particular one was
designed for some special use. The guy who sold it seemed to have a lot of
them going for dirt cheap and said that the conversion was possible with
little difficulty. Though I must say I was rather suspicious. When I tried
to get any specifics from him he tried to avoid a direct answer. I also
found a MX 330 which is working TX/RX on one freq. (around 455MHz). Any
help or info would be really appreciated.

Thanks,
Ronald Newell (N2YSV)

I've done some reading and it appears that in order to operate
no-code HF in Japan the operator must operate at no more than 5 watts
PEP. I wouldn't want to exchange 95 watts of my Kenwood and 295 watts
of my Drake in order to operate no-code. In fact at 5 watts code
would be more reliable than SSB.

Just a thought.

Yep Gareth,

contesting IS a kind of sports event. Of course it differs from
a 100yard sprint during athletic competitions. There are many
other forms of more or less strange sports like chess, shooting,
fishing, car racing to name some popular ones. Contesting is not
popular and other people always consider those activities unknown
to them to be merely idiotic.

You need to be in good physical shape to perform well in a contest.
During last weekend's CQWW I didn't sit on my butt for 10 hours -
I sat there for 42 hours and I had fun!
But I think noone outside contesting will get this...

: who called who, who fed ex'd what, who's son was a ham, who's annoying
: while they type in all caps.. THAT is spamming. YOUR spamming, telling
: someone the're spamming. Get a life..

A "spam", by net convetion, is a posting to multiple groups - where some of the groups have nothing to do with the matter of discussion. They are usually, but not always, of the "make money fast" type crap.

People sometimes continue the spam unknowingly, when they reply to a post without checking the newsgroups list - and trimming it to the applicable groups.

Your misuse of the word, to provide more emotional impact (apparently) does NOT change this meaning.

I was not saying that the others were spamming the net. Far from it, which you would realize if you bothered to read what I wrote. It is listed above, since you were polite enough to quote the comment. I even trimmed the groups to the radio groups - which are the only ones to which this particular discussion belong.

SB QST ARL ARLB106
ARLB106 PRB-1 clone in MA

A new law in Massachusetts will put the language of the FCC's federal preemption of state and local laws affecting amateurs (PRB-1) on the books in that state when it takes effect next year.

H-2782, a bill in the Massachusetts legislature, was written by ARRL Volunteer Counsel Thomas Carrigan, WA1NVS, in 1992. The bill was passed by both chambers of the legislature earlier this year, then sent back to the legislature by Governor William Weld, for modification. Both chambers of the legislature then enacted the bill in the last week of this year's legislative session and sent it to the governor, who signed the bill into law on November 21.

The bill becomes law 90 days after signing, and is assigned to Chapter 225 of the Massachusetts General Laws.

Eastern Massachusetts ARRL Section Manager Phil Temples, K9HI, said ''Like PRB-1, the new Chapter 225 does not give amateurs a green light to do anything they want to do with their antennas. You are still bound by the zoning laws of your city or town, and you will still have to go through the same process for approval that you have

to go through now.

''So what's the difference? Now, when you go to your town hall, you can point to Chapter 225 as requiring that local regulations be reasonable. If you should find it necessary to go to court for satisfaction, you can choose state court or federal court. State court trials would be less expensive, but the precedents set in PRB-1 cases do not transfer to Massachusetts courts,'' Temples said.

Carrigan has written a primer for Massachusetts hams on what the new law means. It is available on the World Wide Web at http://www.ultranet.com/~shawn/wa1nvs.html

Temples also suggested that Massachusetts amateurs who contacted their representatives and senators in support of H-2782 now send a note thanking them for their support.

OH OH OH (HO HO HO, only different),

The 3 KHz is SSB spectrum occupied for most voice intel. It is from the center (suppressed carrier) to the 3 KHz audio point. Most amatuers consider the audio below 300 Hz as unusable. Mics or circuits won't (cant't) produce or carry this audio; so, spectrum normally used is from 300 to 3000 (or 2700) Hz above or below (but not both unless your an AM or DSB guy). Males can use less and you can filter for less (ie., 1800 Hz) - but, its NOT on each side of the window or displayed frequency on most transceivers. 1.5 KHz extends from 300 to 1800 Hz in the sideband of choise, using a 1.8 KHz filter for example.

I once encountered some USB sigs on 17 Meters. The window, display, or suppressed carrier freq was at 18,166.5 KHz and I believe they thought they were well within the 18.168 MHz top band limit. Ha. About 1000 Hz of the signal was out-of-band. Fortunately I was able to tell them on CW at 18,167.5 KHz and still be in the band. {One good reason for CW - but, I hate CW.} One Op complained about a CW signal in the voice band until another of the Ops told the first that I said they were partially "out-of-band". There was resistance, I signed. In 5 minutes, when I checked back- they weren't there.

I agree that 5 KHz is excellent spacing, and as the band gets crowded it can be split to 2.5 KHz with only minor audio discomfort for most. We could go to three SSB signals per 10 KHz; but, there's no standard. In fact the 5 Khz seems to be a waste if folks are attempting to space themselves at 3 to 4 KHz.

Happy Holidays and Merry Radio Spacing,
KF0OS

3212. Digest of Articles - QST Nov 95 (Long - 52k)

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-04 00:00:00 UTC
From: wvanho@infinet.com
Message-ID: <49uqar$j1l@horus.infinet.com>
Source record: 234463
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the November, 1995 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. They are archived, beginning with the January, 1993 issue, and available by ftp from:
(USA) oak.oakland.edu/pub3/hamradio/arrl/infoserver/digests
and
(Europe) ftp.funet.fi/pub/ham/arrl/infoserver/digests

It is hoped that other hams will volunteer to post similar digests of the other ham technical publications such as QEX, CQ, 73, COMMUNICATIONS QUARTERLY, RTTY JOURNAL, et al. Especially desirable would be digests of publications in other countries, such as the RSGB RADIO COMMUNICATIONS and ham magazines in Europe, Japan, Australia, and other countries around the world. We English speakers would especially enjoy them if they were translated into our language, but they would also be valuable additions to the world's knowledge if they were posted in the language of origin. Who knows? Some bi-lingual ham somewhere might translate them into English and re-post them.

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

Title>TA1:Broad Band Transmitting Wire Antennas for 160 Through 10 Meters
Author>Koontz, Floyd A. - WA2WVL
Source>QST Nov 95, pp. 22-24
Abstract>Describes a non-resonant travelling-wave antenna usable on all MF/HF bands. It is a single wire, fed through a 450-ohm transformer with the other end terminated by a 450-ohm resistor to ground.

Digest> WA2WVL has used computer analysis to explore the possibilities of the simplest type of travelling-wave antenna, which he calls the "terminated wire" antenna. Unlike most familiar antennas, travelling-wave antennas are not resonant and standing waves do not form on the wire. Antenna current is uniform from one end to the other. Since the antenna is nonresonant it can be used on any band, although its performance changes from band to band.

The terminated wire antenna is almost identical to the Beverage Wave Antenna that is used for receiving by many hams interested in operating DX on the low bands, 80- and 160-meters. It is a single wire fed at the input end with an un-un transformer (50- to 450-ohms), against ground. The other end of the wire is terminated by a 450-ohm resistor to ground. WA2WVL, instead of using a resistor, terminates the wire with a step-down un-un transformer, identical to that at the input but connected oppositely, with a 50-ohm resistor on the output side.

For proper operation, both ends of the wire should be at ground level so that the transformers can be directly connected to ground stakes with short leads; but for good performance it is necessary to get the major part of the wire as high as possible. The best configuration is two masts as high and as far apart as possible with the wire run from the input at ground level to the top of the first mast, horizontally to the second mast, and down to the load resistor or transformer at the far end.

The article includes a table of calculations for a number of different dimensions and heights, on all bands from 10- to 160-meters. Listed is the radiation efficiency, or percentage of total power that is radiated, for each set of parameters. In each case, the remaining power is dissipated as heat in the terminating resistor. Below are three configurations extracted from the table. Dimensions are in feet (1-foot = 0.305-m.); numbers at the head of each column are frequency;

those in each column are percent:

Height Span 1.8 3.8 7.2 10.1 14.2 18.1 21.2 24.9 28.5

30 60 1.1 11.5 28.9 41.4 48.0 57.5 58.9 67.8 67.9
50 50 3.0 26.7 39.5 50.3 53.3 62.7 67.5 67.9 66.9
70 120 13.8 32.2 46.1 57.7 66.8 68.2 66.6 70.8 70.5

Note that the radiated power from the first listed antenna is down 98.2-percent, nearly 20-dB., on the 160-meter band; but less than 10-dB. on 80-meters, and less than 6-dB. on all higher bands, compared to a full-size dipole on each band.

Radiation from the antenna combines vertical and horizontal polarization. At lower frequencies, the coverage is nearly omnidirectional; at high frequencies there is directivity toward the terminated end. For optimum operation on higher bands, the author uses load resistors and coax relays at both ends to reverse direction.

He has tested an antenna 70-feet high and 120-feet long running from east to west. With 1-kilowatt output on all bands except 10-MHz., he found the SWR was less than 1.5:1 throughout the bands. He noticed no front-to-back ratio on the lowest bands, but on 40-meters it was 10-dB. or more; on 18-MHz. and above, it became 20-dB. or more, which led him to make the antenna reversible.

His qualitative impressions of performance are as follows:
160-meters - Moderately effective for stateside QSOs
80-meters - Competitive with dipole; easily worked VK, LU, and DL
40-meters - Similar to a high dipole on DX
20-meters - Excellent performer world-wide, but not a beam
17- to 10-meters - Competitive with small beams- good in all directions (after making it reversible)

He also tested a different configuration that he called the "Sloping Terminated Wire" (STW). He ran the wire from the ground to a halyard attached to the top of his tower, then sloping downward and outward to the load end at ground level. He was careful to keep the vertical wire at least 10-feet from the tower. The calculated efficiency, and also the probable results, are down somewhat from those of the horizontal configuration, and he recommends that it be used only as a last resort.

Title>TA2:The Four-Way DFer
Author>Mallette, Malcolm C. - WA9BVS
Source>QST Nov 95, pp. 29-35
Abstract>Construction details of a mobile VHF or UHF RDF system. Uses four whip antennas on the roof of the vehicle, a switching module mounted with the whips, and a control cabinet inside.

Digest> WA9BVS has designed and built a compact system for mobile DFing. It works best on the 2-meter band, and can also be used on the 440-MHz. band. It is designed for FM signals on the 2-meter or 440-Mhz. bands.

It uses four magnet-mount whip antennas that must be placed on the roof of the vehicle, spaced slightly less than 1/4-wavelength apart in the four cardinal directions.

The electronic circuits are built in two packages: an antenna switching module to be mounted with the antennas outside the vehicle, and a control cabinet. The system must be used in conjunction with an H-T, or other FM receiver. It switches between the right and left antennas rapidly for 25-times, then switches similarly between the front and rear antennas the same number of times.

The switched input is fed by coax cable to the FM receiver. The receiver's audio output goes to the control cabinet, where the circuit measures the phase difference between successive pulses and actuates drivers that light a series of LED indicators on the front panel. The LEDs are oriented to indicate front, back, right, and left. If the signal direction lies between two cardinal directions, both indicators come on. Hence, the four LEDs discriminate among eight directions.

A problem in direction finding results from the fact that signals reflect from metal objects and can give false direction indications. Especially is this true in built-up areas. To ameliorate the difficulty, damping capacitors are available to be switched into the circuit. These provide a long time constant in the direction-indicating circuit, so transitory indications are damped out and only a longer-term average bearing will be shown, which is much more likely to indicate the true bearing.

Complete wiring diagrams and price lists are included. All necessary components for duplicating the system are available from Radio Shack, and other parts distributors. A set of two etched and drilled PC-boards is available from FAR Circuits, 18N640 Field Ct., Dundee, IL 60118-9269 at a price of $12.50, including domestic USA postage. A PC-board template package is available, free of charge, from the ARRL. Send a request for the Mallette Four-Way DFer along with a business-size SASE to the ARRL, Technical Department Secretary, 225 Main St., Newington, CT 06111-1494.

Title>TA3:A Heads-Up Display for Kenwood MF/HF Transceivers
Author>Bienvenu, Steven N. - NB5F
Source>QST Nov 95, pp. 36-40
Abstract>Construction information for an LCD display for mounting on a vehicle dashboard to display transceiver operating frequencies and switch selections so that the driver can see them without looking down.

Digest>NB5F likes to operate his Kenwood TS-140 on MF/HF bands while driving but, wisely, does not like to take his eyes off the road to tune or adjust his mobile rig. To avoid the necessity, he designed and built a display module that holds a back-lighted LCD on its front panel. It simultaneously displays the transmit and receive frequencies, and also the status of frequently-changed settings such as: USB, FM/CW, RIT, and

Split. Now he has his rig mounted in a convenient place below the dash but with essential operating parameters always at his eye level.

A connecting cable plugs into the computer port on the transceiver, which must contain the Kenwood IF-10 computer-controller module. The circuit is simple. It contains only two ICs, a few resistors and capacitors, one crystal and the LCD. Mr. Bienvenu built the display module in a cabinet that he fabricated from pieces of double-sided PC-board stock. The article includes circuit diagram and parts list, as well as a detailed listing of sources for obtaining the necessary parts and software.

Title>TA4:A Small High-Performance CW Transceiver
Author>Campbell, Rick - KK7B
Source>QST Nov 95, pp. 41-46
Abstract>Build a tiny, light weight, but complete high-performance QRP CW transceiver for backpacking.

Digest>KK7B likes to back-pack into the mountains and also to take a ham station with him. Accordingly, he has built a QRP 20-meter CW transceiver that is approximately the same size and weight of his miniature 35-mm. camera! In that small package is a truly high-performance receiver and 1-watt transmitter with a stable VFO.

To insure good receiver performance in a tiny package, he incorporated a "mini-R2" kit that is now available in kit form from Kanga US, 3521 Spring Lake Dr., Findlay, OH 45840. Practically the entire circuit of that receiver is built on a tiny PC-board. The other major module is the VFO that he built within its own shielded compartment using "ugly style" construction.

Complete circuit diagrams and parts lists are included, as are construction hints. The author reports good results on the air using an antenna of fine-gauge wire thrown over a tree branch.

Title>TA5:The AMSAFID:An Automatic Microphone Switcher Amplifier Filter Integrator Distributor
Author>Mandelkern, Mark - KN5S
Source>QST Nov 95, pp. 47-49
Abstract>Describes construction of a switch box to select among a variety of microphones and several transmitters, in various operating modes.

Digest>KN5S has several radios and a number of microphones, including desk types as well as boom-mike headsets. Sometimes, especially during contest operations, he likes to use a foot-operated push-to-talk (PTT) switch; but for casual operation he usually uses a desk mike with PTT bar. At other times, he uses a digital voice keyer (DVK).

The output impedance and audio output level between mikes vary, as does the input level required by various rigs. To accommodate the

flexibility he wants without needing to plug and unplug cables and readjust the gear each time a change is made, he built a distribution box to make all mikes compatible with all rigs. It contains a switch with two positions: AUTO and DESK MIKE, preamplifiers, and connectors for each of the mikes plus the footswitch.

A schematic diagram, photographs, and parts lists are included in the article.

PRODUCT REVIEW (PR)
Conductor: Rick Lindquist - KX4V
Asst. Technical Editor

Title>PR1:QST Compares: Dual-band FM Mobile Transceivers
Author>Ford, Steve - WB8IMY
Source>QST Nov 95, pp. 75-82
Abstract>Performance review of dual-band FM Mobile Transceivers: Alinco DR-610T, ICOM IC-2700H, ICOM IC-2340H, Kenwood TM-742A, Kenwood TM-733A, Standard C5718DA, Yaesu FT-5200, and Yaesu FT-8500.

Digest>In this review article, eight different VHF/UHF FM transceivers for operation on 2-meter and 70-centimeter bands are reviewed. All units were found to have high quality and will do excellent jobs in either fixed or mobile operation. They all share a number of features, including: versatile scanning functions, DTMF keypads, CTCSS encoders, lots of memories, simultaneous dual-band receive, and many other typical features. All but two feature a removable front panel that can be mounted on the dashboard, making it possible to locate the equipment cabinet at more convenient or safer place in the vehicle. One of the ones that does not is the Standard C5718DA, but that is because the unit does not have a front panel! All its controls are on the microphone housing. The only conventional rig that does not feature a detachable panel is the ICOM IC-2340H.

All units tested provide 50-watts maximum power output on 2-meters; on 70-cms., the Standard C5718DA puts out 40-watts and all the others 35. All offer automatic repeater offset except the Alinco DR-610T. All provide AM reception on the aviation band, except for the two ICOM models, the IC-2700H and the IC-23340H. All come equipped with microphones that have many, or all, of the control buttons mounted on the mike's housing, and are equipped with back-lighted LCD panel displays.

Four of the eight units are equipped for 9600-baud operation, but all of them tune in increments of 5-KHz. per step, so there is no possibility of operating through the PacSat satellites because there is no way to compensate for Doppler changes of frequency.

The eight units were reviewed in detail in alphabetical order, as follows:

Alinco DR-610T

The DR-610T is very compact, which requires the front-panel controls to be exceedingly small. The unit tunes the 70-cm. band all the way to 470-MHz., which includes the downlink frequencies of the 9600-baud packet satellites. It is well equipped for 9600-baud operation, but cannot be used with satellites, as explained above.

The DR-610T features a "Channel Scope" type display on the LCD front panel. This acts something like a spectrum analyzer that shows band activity above and below the operating frequency.

Typical street selling price is $645.

ICOM IC-2340H

The IC-2340H offers one of the most straightforward control panels of the group, although the panel cannot be detached. Most VHF controls are on the left and UHF controls on the right sides of the panel.

The rig is rugged and the audio output sufficient for operating on the highway with the car windows open. One drawback is the fact that the microphone plugs into the rear of the unit. Also, the microphone is exceptionally small, resulting in keypad buttons that are tiny.

ICOM gets high praise for the quality of their operators' manuals. This model is notable in that regard.

Typical selling price is $599.

ICOM IC-2700H

The IC-2700H is exceptionally rugged. The detachable front panel displays frequencies, transmitter offset, signal strength, and other common items. It also displays visually, by bargraphs, the volume and squelch levels set for each band.

This unit can be remotely controlled by DTMF tones on the received radio frequency, with the function protected by password. This raises the possibility of remote base applications.

Although this unit can be used for 1200-baud packet operation, it cannot handle 9600-baud and the manual does not give the information necessary, even for 1200-baud packet.

Typical selling price is $799.

Kenwood TM-742A

This unit is the only one reviewed that can optionally be expanded to a 3-band rig. Two meters and 70-cm. operation are built-in, but expansion modules are available to add 10-meter, 6-meter, 222-MHz., or 1296-MHz.

The reviewer installed the 6-meter module and found it to be relatively easy. It took about 30-minutes to complete. With 3-bands and a small panel, the number of controls required presents a problem. Many of the

control settings must be handled by pre-programming. The reviewers criticized the necessary procedures as cumbersome and difficult.

With either two or three bands, it is possible to monitor all of them at once. If all three are active at the same time, the result is chaos. But if not, the situation is eased by the rig's automatic band switching feature. It can be configured to switch transmit functions automatically to the band that is active at the moment.

Typical street selling price is $699.

Kenwood TM-733A

The TM-733A is a two-band transceiver, and is equipped for both 1200- and 9600-baud packet operations. It provides separate antenna connections for the two bands, or a dual-band antenna with a diplexer can also be accommodated. The display will show both frequencies being tuned simultaneously, or can be set to show only one. Independent volume and squelch controls apply to the separate bands.

This unit offers one unique feature: automatic simplex checker (ASC). When one is commuicating through a repeater, the rig checks the input frequency every three seconds. If the received signal strength directly from the transmitting station becomes strong enough, a symbol flashes on the display. This indicates that the two stations could get off the repeater and maintain simplex communication.

Typical selling price is $610.

Standard C5718DA

The C5718DA puts all the controls, including the LCD display, on the microphone housing. Thus the cabinet can be mounted in a hidden location. The microphone is coated with a rubber-like substance that makes it easy to handle, never slippery.

Both CTCSS encoding and decoding are provided, and this is the only radio in the group that does so. It is ready for 9600-baud packet operation and has a dedicated TNC jack.

Typical selling price is $699.

Yaesu FT-5200

The FT-5200 avoids some of the more complex features in favor of a simple and straightforward operation. There is only one volume and one squelch control that controls whatever band is active at the time. For simultaneous dual-band reception, a BALANCE control mixes the audio from the two bands so that one band can be made louder than the other.

A diplexer is built into the rig so there is only one antenna connector, for dual-band antennas. If one wants to use separate antennas for the two, it is necessary to use an external diplexer.

Although the rig can be used for 1200-baud packet, it is not suitable for 9600-baud.

Typical selling price is $639.

Yaesu FT-8500

The FT-8500 puts all controls on the microphone housing; the removable front panel contains only the LCD display. With all the controls removed from the cabinet, a large display is provided. In addition to showing all the operational data in the top half, the lower half of the LCD is used for the Spectra analyzer. With it, the operator can monitor frequencies, or memory channels, above and below the present operating channel and on both bands simultaneously, if desired.

The unit is equipped for either 1200-baud or 9600-packet. It provides a separate TNC jack.

Like the other units reviewed, the FT-8500 contains a DTMF decoder, and the calls can be programmed in memory. A unique feature is that labels such as "HOME" or "POLICE" can be attached to the memory channels and they will appear on the display whenever the rig steps through the memories.

Typical selling price is $659.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel - N1FB
Assoc. Tech. Editor

Title>TC1:The Great "Woodpecker" Hunt of the '90s
Author>Koester, Tony G. - WD6EKV
Source>QST Nov 95, p. 85
Abstract>Wry description of a long search for the source of RFI, which was finally found being carried on the searcher's own person.

Digest>This is a story of a very frustrating search for interference that was putting a noise level of 20-dB. over S-9 on all HF bands in and around WD6EKV's shack. After trying every known remedy, and obtaining the aid of two experienced ham friends and the electric utility company, without success, he finally discovered that the noise was emanating from his UHF digital pager that he always carried on his person.

Title>TC2:Love That Loop!
Author>Kennedy, Jim Sr.- W7MID
Source>QST Nov 95, pp. 85-86
Abstract>Describes a substitute tuning capacitor that greatly increases the maximum power output capacity of a transmitting loop antenna; and also a salvaged motor drive for that capacitor.

Digest>After reading WA3ULH's article: "A Compact Loop Antenna for 30 to 12 Meters" in QST May 94, W7MID built a similar, but larger, loop for 7-

and 14-MHz. Although the loop described in the article was limited to no more than 7-watts output because of the tuning capacitor that was used, Mr. Kennedy substituted a split-stator capacitor with 100-pF. per section and plate spacing of 0.045-inches. He finds that it handles 100-watts transmitted power with no difficulty.

Also, he found in his junk box a drive motor and gear reducer salvaged from a 1950s-era TV set that was used to change channels on the set. He finds that it works beautifully to drive the tuning capacitor under remote control, and runs reliably on the power from a single dry cell.

Title>TC3:Null Steerer Kudos
Author>Turner, Chuck - KI7NW
Source>QST Nov 95, p. 86
Abstract>A user reports good results with a "Null Steerer", built per the article in QST Jul 94.

Digest>KI7NW, who is a relatively new ham, found that the noise level on the HF bands at his location prevented him from working any but strong signals. When told of the problem, a ham friend referred him to the article by W7XC: "The Null Steerer Revisited" in QST Jul 94.

After reading the article, he rigged up a null steerer using his multiband dipole as primary antenna, and a Butternut vertical as the secondary. The system provided immediate relief from much of the prevailing noise and he offers thanks to QST for publishing it.

Title>TC4:RFI - To a Wheelchair
Author>Pershing, Michael - KD6IJF
Source>QST Nov 95, p. 86
Abstract>Blocking RFI to the control system of a motor-driven wheelchair.

Digest>KD6IJF's wife, KD6GBO, operates an H-T using the main battery of her motorized wheelchair as a power supply. When she transmitted at a power level of 5-watts, the wheelchair moved slowly in reverse!

Her husband's solution to the problem was inspired by a QST article that described wrapping a control lead arround a ferrite core to block common-mode interference in a control loop. In his case, he wrapped the cable controlling the wheelchair around the steel post beneath the seat. This apparently provided enough inductance to block the interference and now, the wheelchair behaves the way it should!

Title>TC5:Too Hot for 2-Meters
Author>Gonzales C., Luis Lauro - XE2LG
Source>QST Nov 95, p. 86
Abstract>Report of RFI to an automobile air-conditioning fan control.

Digest>XE2LG has a Kenwood 732-A dual-band transceiver in his 1994 Mercury. Whenever he transmits on 2-meters, the air-conditioning fan goes to full on, and stays there. Once he returns to the receive mode, the fan reverts to normal speed.

Although the local Ford dealer initially expressed no interest in the problem, after Mr. Gonzales contacted Ford's EMC Car and Test Methods Department, he received a promise of immediate help. The problem is now being investigated.

Title>TC6:Adjusting HF Yagi Matches - Revisited
Author>Sisson, Dick - W5ONL
Source>QST Nov 95, p. 86
Abstract>Method of adjusting a Yagi antenna match at rooftop level.

Digest>After reading K6STI's letter: "Adjusting HF Yagi Matches" in Technical Correspondence, QST Sep 95, W5ONL volunteered his experience in adjusting the match of a 2-element shortened 40-meter Yagi. He first set the antenna up resting on his roof and adjusted the match at the desired operating center frequency. When he raised it to the top of the tower, he found that the resonant frequency had moved up by 117-KHz. So, he lowered it to the roof again and adjusted the resonance point to 117-KHz. below the desired frequency. This time, when he raised it to its final height, it was within 2-KHz. of his target frequency.

LAB NOTES (LN)

Title>Electronic Troubleshooting
Author>Hare, Ed - KA1CV
Source>QST Nov 95, pp. 87-88
Abstract>General tips for troubleshooting electronic equipment from one with long experience.

Digest>In this article, Mr. Hare, ARRL Laboratory Supervisor, offers valuable advice to anyone wanting to troubleshoot electronic equipment. His first words of advice were to learn basic safety rules! Much electronic equipment, even solid state, involves some high voltage circuits such as the primary side of a power transformer.

For test equipment, a multimeter is a must. An oscilloscope can be very useful in looking at r.f., audio, or digital waveforms. A power supply is desirable in case it is necessary to substitute for a defective power supply. Some electronic problems are sensitive to heat, so a heat lamp and cold spray may help isolate these problems.

Before beginning any service job, read the manual. To handle anything other than the most basic diagnosis, it will be necessary to have at least a circuit diagram; a service manual is even better.

General guidelines are to simplify the problem as much as possible. First, check the power supply. Be sure the voltage, under load, is

proper; not too high nor too low. If not, fix that problem first! Then check to see if the faulty voltage caused failures in other circuits.

If a system is made up of a number of interconnected subsystems, be sure to separate them and test each subsystem separately to determine where the problem lies. If it is necessary to disassemble one, take notes while unscrewing parts and disconnecting wires. They will be needed for reassembly!

When all parts of the equipment are accessible, before doing anything else, spend enough time to scrutinize every part visually. About half of all electronic problems exhibit a visible fault, e.g. a broken lead, burn or char marks from overheating, a loose connector, or a cold-solder joint.

If nothing obvious is found, the next level of analysis is a signal-tracing technique. Whatever the equipment is, there is usually an input, a processing section, and an output. Simulate an input, track it stage-by-stage through the equipment to find the place where it stops to find the location of the problem.

Finally, when it appears that the faults have been corrected, spend enough time to check the quality of the work just performed. Check the solder joints, the replaced components, and be sure that there are no pinched wires.

HINTS AND KINKS (HK)
Conductor: Bob Schetgen - KU7G
Asst. Technical Editor

Title>HK1:A Reel-In Portable HF Antenna Idea
Author>Schultz, John J. - W4FA
Source>QST Nov 95, p. 83
Abstract>Wind a portable wire antenna onto a chalk-line reel.

Digest>A handy portable antenna carrier can be made from a chalk-line reel sold in hardware stores for $5.00, or less. They contain hand-crank reels for carrying 100-foot long chalk lines and will hold about the same length of No. 20 or 22 copper wire.

Title>HK2:ICOM IC-720A Low-Pass-Filter Rotary Relay Modification
Author>VanProoyen, L. - K8KWD
Source>QST Nov 95, p. 83
Abstract>Repairing and modifying the rotary solenoid in an ICOM IC-720A.

Digest>The IC-720A uses a filter selection system made of a 7-position rotary switch actuated by a Ledex-type rotary solenoid that indexes ahead about 45-degrees each time it is pulsed. One deck on the switch senses when the wipers are in the proper position. With age, the

contacts can become dirty with the result that the switch will continue to step around and around for some time, causing a loud clicking noise. One can often fix the problem by cleaning the contacts.

Another problem may be that the detent ring at the rear of the switch has worn loose. The author corrected such a fault by repositioning it and fastening it in place with epoxy cement. Then he reduced the torque applied with each pulse by inserting a 4.7-ohm, 2-watt resistor in series with the coil. The assembly still works properly, even with the lower torque.

Title>HK3:Easy PL-259 Connections
Author>Jensen, Ed - K5ED
Source>QST Nov 95, pp. 83-84
Abstract>Describes another "easy" method of attaching a PL-259 plug on coax.

Digest>This communication contains another suggested "easy" method of attaching PL-259 assemblies to coax cable. K5ED suggests that one should first prepare the cable by stripping the black jacket back 2.25-inches; cutting the shield braid back 1.5-inches with a clean cut; and stripping the dielectric back 0.75-inches from the end of the wire. Then, if an adapter is being used, it and the connector body are soldered together as one piece. When the cable is inserted into it, the braid will extend a bit inside the adapter, so a solder bead should be melted around the entire circumference of the cable to connect the braid and adapter together. Then the center conductor is soldered at the tip of the connector, and the four small solder holes around the connector body are filled with drops of solder, to finish the job.

This procedure leaves a portion of the shield braid and the solder joint exposed. That area should be wrapped with tape and weatherproofed.

If large diameter RG-8 is being used, the gap between the braid and the connector should be filled with No. 14 wire wrapped tightly around the braid where it slips into the connector body. Then the entire periphery should be soldered at the connector/braid interface.

Title>HK4:Cure for the "Missing First Dot" Problem With ICOM MF/HF Rigs Driving Linear Amplifiers
Author>Brock-Fisher, Tony - K1KP
Source>QST Nov 95, p. 84
Abstract>A method for overcoming the time delay in initial keying of ICOM transceivers operating mode.

Digest>Many CW operators who use ICOM rigs to drive external amplifiers have found, to their dismay, that when they begin to transmit, they lose part or all of the first code element keyed. The cause is too much delay between the key closure and operation of the TR circuit in the rig. This effect is detectable even when operating without an

amplifier, but is decidedly worse with one, because the delay in the amplifier relays are added to the already excessive delay.

To cure the problem, it is necessary to use a control signal from earlier in the timing chain to actuate the amplifier. The SEND line is available at the accessory jacks on the rig's back panel. It goes low on transmit and can sink 20-ma. For amplifiers that require only 20-volts at 50-ma., or less, a simple opto-coupler is all that is required to control the amplifier by the SEND line directly. For circuits that require higher power, the opto-coupler can be followed by either a HexFET or a high-breakdown-voltage NPN transistor. Suitable circuit diagrams are included with the letter.

Title>HK5:Poor Man's GPS
Author>Edmondson, William B. - N6OUW
Source>QST Nov 95, p. 84
Abstract>How to obtain a free scale for use with US Geodetic Survey maps.

Digest>Not everyone can afford a GPS receiver for occasional use when wanting to plot or identify geographical locations by latitude and longitude. The next best solution is to use US Geodetic Survey maps and a scale accurately graduated to match the charts and maps. Decibel Products, 8635 Stemmons Freeway, Dallas, TX 75247 is offering a plastic ruler with four scales matching the Sectional Aeronautical 1:500,000 charts, USGS 15-minute quadrangle, USGS 7.5-minute quadrangle, and USGS 1:250,000 series, as a promotional item free of charge, by request.

FEEDBACK (FB)

Title>FB1:"An Automatic, Remote Antenna-Tuning Controller" QST Sep 95
Author>Pagel, Paul - N1FB
Source>QST Nov 95, p. 86
Abstract>How to obtain an etched and drilled PC-board for the subject project.

Digest>An etched and drilled PC-board for the project described is available from FAR Circuits, 18N640 Field Ct., Dundee, IL 60118-9269, for a price of $8.00, including domestic shipping.

Title>FB2:"QST Compares: GPS Compatible TNCs" QST Oct 95
Author>Bruninga, Bob - WB4APR
Source>QST Nov 95, p. 111
Abstract>The APRS software described in the subject article is shareware.

Digest>The article advised that registered copies of APRS software could be obtained from the Bob Bruninga - WB4APR. It should have stated that APRS is shareware, found on most ham radio BBSs and on Internet sites.

Copies on disk can be obtained for $9.00 each from Bob Bruninga - WB4APR, 115 Old Farm Ct., Glen Burnie, MD 21060.

It can obtained by ftp from tapr.org in the directories tapr/SIG/aprssig/upload. Registration is $24.00.

NEW HAM COMPANION (NHC)

Title>NHC1:AM Broadcast DXing
Author>Heinen, Wayne - N0POH
Source>QST Nov 95, pp. 62-63, 65
Abstract>Describes the hobby of listening to distant AM broadcasts.

Digest>The amplitude modulation (AM) broadcast band spans from 535- to 1705-KHz. and is packed with stations. The author describes how he enjoys "DXing", or listening across the band to pickup distant station.

The fun of listening is increased by collecting QSL cards. If the listener writes a simple postcard report giving their location, the time and date of reception, and an indication of the general strength and intelligibility of the received signal, many stations will respond with QSL cards thanking the listener.

The equipment necessary for enjoyable AM DXing is moderate. A simple broadcast receiver is adequate for a starter. The most important item of equipment is an outside antenna, as long and as high as is practical.

For up-to-date information and contact with other hobbyists with similar interests, the National Radio Club is the largest and most active organization. For membership information and a catalog of publications devoted to the hobby, send a first-class stamp to: NRC Publications, P.O. Box 164, Mannsville, NY 13661-0164.

Title>NHC2:Confessions of a CW Hater
Author>Sadler, R. A. (Art) - KC7IG
Source>QST Nov 95, pp. 64-65
Abstract>How a ham came to understand, and like, CW.

Digest>KC7IG writes of his experience as a young ham in the 1950s when he got a Novice license, but at the end of the one year expiration was unable to pass the 13-wpm code requirement. So he settled for a Technician license, but later found operating VHF and UHF to be unsatisfying and let his license lapse.

More than 20-years later, some special circumstances caused him to investigate the hobby once more, and he decided to expend the effort to learn Morse code. After doing so, he came to realize that the code, as practiced by amateurs, is actually a new language. It is made up of abbreviations of English words, Q-signals, and certain other signals developed for special purposes in radio operation, all of which are

known and practiced worldwide. This is what makes it possible for hams in every nation to communicate with each other without knowing one word of the others' languages. Now, Mr. Sadler has come to enjoy CW operation thoroughly and suggests that others give it a try, in the hope that they might enjoy it as much as he does.

Title>NHC3:The Doctor is IN
Author>Various
Source>QST Nov 95, pp. 66-67
Abstract>Questions and answers of primary interest to newcomers to amateur radio.

Digest>Questions discussed in this issue include: causes of r.f. noise in urban environments; modes of operation to be used on the new Phase 3D satellite; possible causes of an oscillation that occurs when a reader operates his Kenwood TS-430S transceiver with a DSP-9 audio filter; tunable noise that appears on the 80-meter band at intervals of 40-KHz.; various kinds of suffixes that some stations tack on the ends of their calls; apparent directional characteristics of a dipole; conventional ways of using keyer paddles; whether to change one's callsign when upgrading a license; data compression schemes used in packet operations; determining grid square locations; and other subjects.

Title>NHC4:The Changing Face of Amateur Radio
Author>Bible, Steven R. - N7HPR
Source>QST Nov 95, p. 68
Abstract>How Internet can enhance amateur radio.

Digest>A great many hams have computers and access to Internet. They have learned to use E-Mail for sending messages with almost 100-percent reliability at any time of the day, year, or stage of the sunspot cycle, to almost every part of the earth. The next step beyond simple E-Mail is the CHAT mode, which allows two people on Internet at the same time to exchange messages continuously, just as if they were in a QSO.

Now, for those plug-in sound cards in their computers and software comparable to the "Internet Phone" program, the chats can use voice. The software causes the sound cards to encode speech into packets which are then sent across the net. At the other end of the link, they are be converted back into speech and sounded through the loudspeaker. With the current Internet Phone software, only point-to-point communication is possible, but soon programs will make conferences possible.

So does this obsolete amateur radio? Probably not because, for one reason, there is no way to call CQ on Internet. More exciting are the possibilities of combining Internet with ham radio. One idea is an Internet phone patch. Another intriguing possibility is linking repeaters between cities, miles apart.

Title>NHC5:A Four-Band "Tree" Vertical
Author>Weaver, Mark - WB3BJF
Source>QST Nov 95, p. 69-70
Abstract>Constructing three full-size, invisible vertical antennas in a tree.

Digest>WB3BJF lives in a townhouse where no outdoor antennas are allowed. However, there is a tree about 20-feet from the house and he erected three full-size quarter-wave monopole antennas for 40-, 20-, and 10-meters using the tree as the support. He actually covers four bands, since he can load the 40-meter antenna on 15-meters with no difficulty.

He used No. 26 enameled wire and ran it up alongside the tree trunk and tied the ends to branches using nylon fishing line. Lying against the trunk, the wire is essentially invisible. For the lower bands, he ran the wire up as high as possible, then bent it and ran it horizontally to the house.

At the bottom end, he looped a length of No. 14 wire around the trunk on the ground. Next, he soldered radial wires to the loop and ran them out into the yard.

Finally, he ran the coax feedline out through a hole in the wall of the house where a water pipe exits to an outdoor spigot, then across the ground to the base of the tree. There he soldered the shield braid to the wire loop and the center conductor to all the antenna wires in parallel. To finish, he buried the cable and radials slightly under the ground and covered the wire loop with mulch.

He finds the antenna to be very effective, and almost completely invisible.

Title>NHC6:Airborne Amateur Television
Author>Berkman, Ronald - KA9CAP
Source>QST Nov 95, pp. 71-74
Abstract>Describes a radio controlled model plane with ATV camera so the builder can "fly" the plane as if he were aboard.

Digest>KA9CAP is a man of many hobbies. He was a model railroad enthusiast, became a ham and confirmed packeteer, got into amateur TV (ATV), also took up model airplanes, and finally radio control for them. Then his hobbies converged; he built a radio-controlled model airplane that carries a miniature ATV camera aloft. Now he can fly the airplane, almost as he would if he were sitting in its miniature cockpit.

RADIO TIPS (RT)

These are short items, scattered among the articles in the New Ham Companion section, of interest to newcomers.

Title>RT1:Correct CW Procedures
Author>Anonymous
Source>QST Nov 95, p. 70
Abstract>Customary practices in CW operating.

Digest>This tip is a very brief guide to the conventional ways of establishing a CW QSO, how to begin it, and how to end it.

Title>RT2:The Many Flavors of ATV
Author>Ford, Steve - WB8IMY
Source>QST Nov 95, p. 74
Abstract>Describes various activities of ATV enthusiasts.

Digest>This item describes a number of the activities pursued by hams active with Amateur Television (ATV). Compared to other activities in amateur radio, only small numbers of hams pursue ATV; and since the activity is confined to UHF bands, QSOs are almost always local. Some ATVers have launched baloons or model airplanes to take pictures from high altitude. The article states that even some have shot tiny ATV cameras aloft aboard model rockets.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:The Door to Damascus
Author>Epps, Rusty - W6OAT, McShane, Tom - NW6P, and
Vinson, Glenn - W6OTC
Source>QST Nov 95, pp. 25-28
Abstract>The reception found by hams visiting and operating in Damascus, Syria.

Digest:In the entire nation of Syria, there are fewer than a dozen licensed amateurs, and more than half of them belong to one family. The head of that family is Dr. Omar Shabsigh, YK1AO, president of the Technical Institute of Radio, which is the Syrian ham organization.

The Northern California DX Foundation contacted him in 1994 and asked his help to obtain permission for a number of US hams to visit and operate amateur radio for a short length of time. Dr. Shabsigh thought the likelihood that the government would allow this was very slim, but he agreed to investigate. Both he and his American friends were quite surprised when permission came back for the American hams to operate, using the call: YK0A.

W6OAT led a group of eight California hams who made the trip to Damascus to coincide with the CQ Worldwide CW DX Contest in late November, 1994. The group was greeted with great courtesy and hospitality by Dr. Shabsigh and a large number of very friendly students, electronic technicians, and even government inspectors whose job was to oversee their activities. They operated on every band from 160- to 10-meters and made nearly 15,000 QSOs during their stay.

(With the article is a picture of the visitors' hotel in Damascus. The caption mistakenly identifies it as being in Baghdad, the capital of Iraq, a sworn enemy of Syria!)

Title>GI2:South Texas Stealth Sweepstakes
Author>Schaffenberger, Paul - KB8N
Source>QST Nov 95, pp. 50-52
Abstract>How a San Antonio amateur erected four invisible antennas.

Digest>KB8N lives in an area of San Antonio where outdoor antennas are forbidden, but there are trees on his lot and so he put up four "invisible" antennas: an 80-meter dipole, two perpendicular 40-meter dipoles, and a wire vertical. He took all possible precautions to prevent RFI and operates only with low power, so he believes that none of his neighbors is even aware that he is active.

With this modest setup, he entered last year's November Sweepstakes and ran up a respectable, even impressive, score. He registered 919 QSOs with 75 multipliers, for a score of 137,850. This article describes his experiences in detail.

Title>GI3:Old Bug Bites Ham
Author>Carpenter, Bill - AA8EY
Source>QST Nov 95, p. 53
Abstract>Discovery of a very old semi-automatic key at an antique show.

Digest>AA8EY was browsing at an antique show when he noticed a semi-automatic key (bug) being offered for sale. It was in terrible condition, covered with layers of dirt, but he bought it.

After taking it home, he cleaned it and found that it is built of solid brass. He also found the tradename "Mecograph" engraved into the metal.

With some research, he discovered that the Mecograph Company was active in Cleveland, Ohio from about 1907 to 1913. The company's owner died in the latter year, and the company was bought out by the Vibroplex Company, at that time owned and operated by Horace Martin, who developed the first bug.

Title>GI4:The WATTS Award
Author>Licht, Harley - WA6ISX
Source>QST Nov 95, pp. 54-58
Abstract>How one amateur eliminated almost all RFI that his operating caused to neighbors' electronic appliances.

Digest>The word "WATTS" in the title of this article was wryly coined by the author to mean: "Worked All Telephone, Television, and Stereos". When he returned to the air after being inactive for a number of years, he found that he was causing RFI to all kinds of electronic appliances owned by his neighbors.

In this article, he describes the different steps he took to try to eliminate the RFI. The most difficult problems were with the telephones. In most cases, he was successful, using commercial or home-built filters. But in some, he had to fall back on the FCC's Part 97 regulations or Part 15 rules that limit amateurs' responsibility to seeing that their own equipment is operating within its assigned limits.

I'd argue that we already have that, for the most part. Yes,
there are probably people who _can_ memorize the complete Novice and
Tech question pools and answers in less than a week, but I'll bet
they're pretty rare. I don't see any value in simply enlarging the
size of the pool, unless there's material which needs to be added.

>better, allow a group of questions to be custom-generated for each
>test with a computer by changing circuit parameters, so that NO

I go for this, to a degree. Questions involving calculations
can be altered within reasonable parameters (it'd be nice, though, to
ensure that a resonant frequency doesn't come up as 236 THz--IOW, keep
the ranges reasonable). On the old Advanced written, 2 or 3 numbers
would give you all the answers for all the phase-angle questions,
though, which isn't a particularly good thing.

I am interested in obtaining information concerning the MOD
from Mutek Ltd, in England for the Yaesu 736R. The Mod
replaces two pc boards in the radio from switching diodes with
relays, and is suppose to highly improve the receive....anyone
having information on this please email.....Thanks...Hugh

3217. Is 160 going the way of 80??

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-04 00:00:00 UTC
From: Gareth Crispell <stranger@ccsnet.com>
Message-ID: <49tlks$2s8@alterdial.UU.NET>
Source record: 234468

I was discouraged this evening to hear garbage on 160. Guys were
singing,cussing, and making racial and ethnic slurs all over the place.
This kind of "bad radio" has gone on for years on 80 as I am sure most of
you know. However, I had not heard this before on 160. I sure wish this
kind of operator would leave the old "Top Band" alone. Bummer :-(

3221. Help requested on hearing aids being blown

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-04 00:00:00 UTC
From: pickerel@netcom.com
Message-ID: <pickerelDJ1G9r.8oq@netcom.com>
Source record: 234472

Hi.
Sorry to be very off subject, but a friend of mine has requested some help. Her son wears two hearing aids. He's just been moved to a new classroom, and his hearing aids keeping going bad on him. The hearing aid company has evidently suggested some type of broadcast noise in the classroom. The school has recently replaced the lights with better ones, but she'd like to evaluate the classroom to see if there are any other sources of high power emf.

So she's asked me, a very inactive ham, for ideas. She can't afford expensive equipment, but I thought some of you might have ideas on figuring amount of power in the area, and maybe getting an idea of what frequencies are being generated, although my guess would be 60Hz.
Ideas on home made equipment would be very helpful.

Thanks for any ideas.
-Don Pickerel-

Hugh your system administrator should be shot for postings that can't be
replied to directly (your message header is defective) but here is the info
I have on the Mutek stuff. I suspect expensive, and I haven't tried it
on my 736, but here goes (courtesy of GM0WDD):

Mutek address is;

muTek limited
PO Box 24
Long Eaton
Nottingham
NG10 4NQ

Phone 0115 9729467

If I remeber correctly they don't take access or visa :-(so there is an
authorised dealer over here for muTek who does and they are;

Martin Lynch G4HKS,
The Amateur Radio Exchange Centre
140-142 Northfield Avenue
Ealing
London
W13 9SB

Phone 0181 566 1120

They BTW are about the No 1 company in the UK (no I don't work for them!) but I
got a rig by mail order and it's a fast efficient service...

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 04/2330Z DECEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 04 DECEMBER AND FORECAST FOR 05 DECEMBER - 07 DECEMBER

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 73/9

GOES satellite data for 03 Dec
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
05 Dec 06 Dec 07 Dec
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 05 Dec: 73/9

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled, with an active
period 03-06UT.

Estimated Indices : A K Observed A Index 03 Dec
Learmonth 10 2432 2311
Fredericksburg 18 9
Planetary 19 7

Observed Kp for 03 Dec: 1122 2232
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
05 Dec 7 quiet to unsettled
06 Dec 5 quiet to unsettled
07 Dec 5 quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
04 Dec Normal Normal Fair-Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
05 Dec Normal Normal Fair-normal
06 Dec Normal Normal Normal
07 Dec Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
04 Dec 23

Observed Australian Regional MUFs:
Townsville:15-30% enhanced during local daylight.
Sydney: near predicted monthly values.
Hobart: near predicted monthly values with blanketing
sporadic E observed 00-01UT and 03UT.
Regular Sporadic E was observed at all sites.

Predicted Monthly T index for December: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
05 Dec 5 near predicted monthly values with some
sporadic E conditions.
06 Dec 5 As for 05 Dec.
07 Dec 5 As for 05 Dec.

3225. US Counties: QSLs needed (II)

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-04 00:00:00 UTC
From: kwp@rai.ping.at
Message-ID: <5zF59DW--jB@rai.ping.at>
Source record: 234476

Okay, friends,
we try again. Last week we asked for your help: QSL COLLECTION still needs a good number of QSLs from particular US Counties - result: *one single* reply. Perhaps you are too busy to discuss four-letter-words and all kind of trash to consider an earnest request and serve a good cause.
Here we go again. If you happen to have a QSL to spare from any of these counties, please give me a shout (or send the card/s right along to: QSL COLLECTION, POB 2, A-1112 Vienna, Austria-Europe).
If you want to learn more about the largest collection/exhibition/ research & documentation centre of its kind worldwide: let me know.

I agree with Dana.

Yes, I may be a no-code, but does that mean I'm stupid? How can I be stupid when I graduated high school with a 3.89 GPA, and a member of National Honor Society? How can I be stupid when I get close to a 4.00 GPA my first quater

at OSU? I'm not lazy either! Not only do I study, I work part time, and I am active in my church. I have code tapes and have listened to them before. However, since I am active in many other things in my life, I have not had time to study code. I do plan to upgrade in the future. I've got 7 years before my license expires. That should give me plenty of time to learn code. When I get code, I'll work HF. As for no-code HF, I don't agree with it. I think the current license classes are fine as is. Besides, on 6 meters, I can get DX almost as good as HF when the band is open.

Quit stereotyping no-code techs! WE ARE HAMS BY DEFINITION AND BY LAW!

I can't argue with the article on AARS because I've never BEEN to
Austin, much less shopped there.

However, AES down in Las Vegas has a person on staff named Squeak who
for my money is the sharpest, easiest to get along with ham radio
sales person I've ever had the pleasure of dealing with. If you have
a question that Squeak can't answer, you've got yourself one hell of a
question.

I've got nothing to do with AES other than being a satisfied customer.

The reasons for the first assumption are self evident. But the
reasons for the second are not. Why should recognition be a goal
of licensing structure? I think it is this assumption that is perhaps
the root of much of the debate in this newsgroup.

> What recommendations would you make for changes in the
> testing and licensing structure for licensees in the US
> Amateur Radio Service?

If your second assumption (requirement?) is dropped, I'd suggest
a 2 or 3 class license structure. An entry level license similar to the
current technician but with perhaps more limited privileges. The
testing should be focused primarily on knowledge required to
operate safely and responsibly. Use of non-type accepted
transmitters should be limited to QRP levels. The second class of
license would be an unlimited operators license. Exam difficulty
or content would be somewhere between the current general
and advanced class license. Again, transmitter limitations would
be to type accepted equipment except for QRP levels. The third
class (or perhaps a separate kind of license instead of class, i.e.,
could be held by either the entry level licensee or the unlimited
operator licensee) would permit using non-type accepted equipment
at any legal power level. The difficulty should be either advanced
or extra class level theory and plus some, particularly with regards
to circuit design and analysis.

The primary reason for having a separate builders license for non-QRP
equipment is to help reduce interference and electrocution problems.
If people don't believe this is much of an issue, then I'd suggest simply
merging it in with the unlimited class license, i.e., leaving just a 2 class
licensing structure.

As for changes in testing, I'd suggest that tests be generated much
like QSO's are currently generated. Test format should remain
multiple choice to eliminate the possibility of arguments over answers
and help reduce the VE's load.

He must be new into computers. Running 24 hours a day since Feburary this
year is nothing. We have MANY computers in our office that have been running
around the clock for years!

One machine, in particular, is an IBM model 25, which has been running 24
hours a day, since 1987, without one hardware failure!

Further, it shoud be noted, that turning a machine on and off a lot,
compared to leaving it run, is harder on it. If your going to use your
machine again in say...2 hours, my advice is to just leave it on.

Great, just what we need. More affirmative action. I can see the whining now "Waaaa. Its the bottom of the sunspot cycle. I can't work any DX. Its not Faaaaair. I want 20 meter no-code! Waaaa..."

>this way we could get alittle more interest in the awesome DX fun
>below and entice more folks to study that 'acient old technology -

Entice them? Wasn't that the argument for no-code VHF. "Get them interested in the hobby. And then they'll upgrade." Yeah. If some posted statistics are correct, they aren't. Rather than work for the upgrade, they just whine about it until they get no-code HF. Hell, after all, it worked for VHF no-code.

>73
>Chris
>(an ACC RC850 and LinkCom RLC3 owner)

Keep in mind that some controllers do not pass PL well without modification. The LinkComm controllers use a input coupling capacitor that is too small to pass most CTCSS tones properly. On the other hand, the mic input on some transmitters will actually pass PL OK; the problem is what happens to the PL tone when it hits the limiter along with the rest of the repeat audio. It gets sufficiently attenuated via clipping that excessive talk-off occurs.

Hello Peter,

I do not have the catalog here at the office, but I believe RF Parts has MRF 422 matched pairs and matched quads. I also think that the matched pairs are about $80.00 US. I want some really bad so I can finish repairing my HF amplifier (uses two 300 watt ampluifiers with pairs of 422s). If no one else responds to your request, I will get more details.

I sure hate these things are so expensive but they are not exactly high volume parts!

3251. NTS: Here's a great idea

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-05 00:00:00 UTC
From: Greg Pool <wh6dt@amsat.org>
Message-ID: <4a1iou$eiv@wing.redshift.com>
Source record: 234361

OUT-OF-AREA CONTACT PROGRAM

Greg Pool, WH6DT
Dorothy Stringer, KE6MTY

The National Traffic System (NTS) is an efficient means by which amateur operators can handle welfare messages originating within a disaster area. We propose a new, practical program, based on this fact, by which NTS net members can better serve the local community with health and welfare traffic needs.

The "Out-of-Area Contact Program" works like this: NTS traffic handlers would encourage neighbors to choose an out-of-area contact person in advance of a disaster. Ideally, the contact person would be a relative living far enough outside of the potential disaster area to be unaffected, who would, upon receiving a message, contact the rest of the family members and friends throughout the country. Each telephone call consequently made by the contact person would head off the generation of incoming welfare messages, which are inherently impractical to deliver and often jam the system.

To promote the program in a neighborhood, create a display or exhibit that informs your community of the benefits of an Out-of-Area Contact program. Obtain the name, address and phone number of contacts and generate traffic for them, to test the system. Inform your neighbor that you expect to be available at local shelters during a disaster where you will perform the service when the phone lines are out. Encourage them to keep contact information close at hand, perhaps on a durable card, along with basic information about NTS, local shelter locations, and your local Amateur Radio club.

By encouraging members of your community to think of an Out-of-Area Contact you will have raised their awareness and heightened their preparation for a disaster. At the same time you will have generated a piece of traffic for your net and elevated the level of training in your own organization. We feel the Out-of-Area Contact program combines the best aspects of public service with emergency preparedness. Frequent contact with your community and practice of your skills will result in another terrific example of the benefits of the Amateur service.

>>> BE FORWARNED!!! BEFORE YOU BUY A PACKARD BELL
>>> COMPUTER, KNOW THAT THEY WILL TAKE YOUR MONEY, BUT IF
>>> ANYTHING GOES >>WRONG<< WITH IT, YOU >>WILL<< BE
>>> IGNORED!!!!

Sounds like a rash genaralization to me.

I have a Packard Bell 836CDT (Pentium 100, 16meg RAM) that I bought in February. The thing is turned on all day, every day, and not a single problem. I would most definitely purchase another Packard Bell and would also recomend them to others. A quality machine, and you can't beat the price, either.

From: Stephan M. Anderman <sanderman@delphi.com>
Newsgroups: rec.radio.amateur.misc
Subject: This Week in Amateur Radio #140 (for air through 12/8/95)
Date: Sat, 2 DEC 95 03:25:07 -0500
Organization: Delphi (info@delphi.com email, 800-695-4005 voice)
Message-ID: <xTLlLpz.sanderman@delphi.com>

Here is a summary of news items covered on edition #140 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 8-Dec:
-
1. Massachusetts Enacts "PRB-1 Clone" to Protect Amateurs' Rights
2. Merger of Major Equipment Manufacturer Won't Affect Ham Sales
3. ARRL Announces Winner of Annual Hiram Percy Maxim Award
4. Amateur Radio Mourns Loss of Two of its Most Notable Citizens
5. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
6. "This Week in Amateur Radio" to Temporarily Suspend Operations
7. Upcoming Special Event Stations with George Bowen, N2LQS
8. "Amateur Radio Newsline" - Edition #955 from Los Angeles
9. "The RAIN Dial-up" from Chicago
10. Weekly Propagation Forecast
-
Funding for the program's transmission and production expenses was
provided this week by a grant from the N6ICW Repeater Fund, of
Sacramento, California, which carries "This Week in Amateur Radio"
on the N6ICW repeaters in Sacramento, serving the Sacramento Valley
and San Francisco Bay area on 147.195 MHz, and in South Lake Tahoe,
serving Tahoe, Reno, and Carson City, Nevada on 145.15 MHz.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard each Saturday at 8:00 PM (EST) and carried on VHF/UHF
repeaters throughout North America and on 160 meters at 1860 kHz.
Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
Due to the loss of satellite facilities, the service is being
temporarily suspended. The "Tech Talk Network" expects to complete
negotiations with a new satellite uplink carrier by the beginning
of January. "This Week in Amateur Radio" will return at that time.
Details will be posted as conditions warrant. All affiliates are
requested to contact the producers for further information.
-

Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (e-mail kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (e-mail sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

ARRL Bulletin 107 ARLB107
From ARRL Headquarters
Newington CT December 6, 1995
To all radio amateurs

SB QST ARL ARLB107
ARLB107 HPM Award nominations

Nominations are now open for the Hiram Percy Maxim Memorial Award.
This award goes annually to a radio amateur under age 21 whose
amateur radio accomplishments and contributions are exemplary.
Section Managers nominate individuals based on, but not limited to,
participation or leadership in local or national organizational
affairs, technical achievement, operating record, recruitment and
training of new amateurs and public relations activities.
Nominations should thoroughly document the nominee's Amateur Radio
achievements and contributions during the previous calendar year. An
award panel reviews the nominations and selects a winner. The winner
gets 1000 dollars, an engraved plaque, and a trip to attend an ARRL
convention for a formal presentation. The nomination deadline is
March 31, 1996. Section Managers may nominate more than one person.
For more details, contact Rick Palm, K1CE, Field Services Manager,
at ARRL Headquarters.

As a resident of Austin. Texas, who has unfortunately frequented Austin Amateur Radio Suppy, I can attest first hand to their surly, impatient, and at times down right abrasive attitude. As a ham for over 40 years, I can not ever remember being treated so rudely when asking specific questions about an impending purchase.

I am the Radio Engineer for Salt Lake County Public Safety and am actually working on this 'outdated technology' just to play the code game... I own and operate a complete radio sight and service and maintain some of Utah's most technically superior repeater/link and HF gateways... do i agree with doing away with code alltogether? Not entirely, but it would be nice to let the no-coders on Ten Meters, this way we could get alittle more interest in the awesome DX fun below and entice more folks to study that 'acient old technology - CODE'... as for me, there are extra's and Advanced hams around here that know little or more then students at the local High School... --- Anyone can memorize the Exam questions....it happens ALL the TIME..
Congrats to the guy that got 100% on his Advanced and he's a no-coder too... I honestly believe that the No-Code technician license is the best thing the FCC and ARRL has done in promoting new growth, but I also believe that even this will stagnate after awhile and the FCC and ARRL will again be changing and allowing 10 meter full usage to Tech, no-coders...

This may be possible in principle, but it would be extremely difficult. I built up one of the original kits; it worked fine, but this is a complicated gadget. It's assembled using motherboard/daughterboard construction, and the receiver was a preassembled daughterboard that plugged in. There were two other plug-in boards; the display, and one other circuitry board. What you suggest could be done with a whole lot of hard work, but you'd have to want to know what time it is real, real bad to go to all that trouble.

>hood was raised. Who manufactured the battery and why did it explode?

I can't provide a lot of specifics except to note that batteries do indeed
explode. The rule of thumb is to treat all lead acid batteries as
- a bomb
- a powerful arc welder
- a source of highly hazardous acid - a veritable hazardous materials scene in
a convenient carrying box.

During operation, lead acid batteries out gas hyrdogen gas. Opening the car
hood might have created a nice mixture of hyrdogen and oxygen. Contributing
factors could have been spark sources (a cigarette perhaps?)

I would like to know why the Morse code test has more to do with keeping minorities out of Ham Radio than any other factor?

Does a person who is part of a "minority" have insufficient intelligence to learn the code? Do they have lack of access to studying materials? A person who has the aptitude to learn the code IS a minority. It has nothing to do with race, color or creed!

WOW! In the past few years, I've spent about $1200 at this establishment and found that their people were friendly and helpful. As I'm in New Jersey, I was never a walk-in customer if that makes any difference. At least over the phone, I've had no problems with them.

AMATEUR RADIO: ELMERS LIST INFO AND ADMINISTRIVIA

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via the Internet. Any other uses, please E-mail for permission.

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

Scott Ehrlich has graciously agreed to be a WWW Elmer and provide further information about how to obtain and use WWW client software such as Lynx and Mosaic (see his entry). While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

I expect there to be a bit of controversy regarding my adoption of this somewhat radical new standard, especially to many users who can't or won't use WWW. Those users should be assured that I wouldn't have adopted a standard unless it was easily human-readable by those accessing this document as straight ASCII. The URL format is easily

mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software (which is why almost all http: URL's in this directory also have corresponding ftp: or gopher: URL's).

For more information about URL formats, see:

ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview:

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1947-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and

years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages or FTP archives, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@gonix.com, the default Reply-To: of this message). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not necessarily get reviewed for some time (although all E-mail sent to me is certainly read with interest *eventually*).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion postings to this message, "Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource

Directory [*-*]," and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

+ news:rec.radio.amateur.misc
+ news.rec.radio.info
+ news:rec.answers
+ news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

+ ftp://ftp.cs.buffalo.edu/pub/ham-radio/
+ ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
+ ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail
within 24 hours (the mail-server uses batch priority to reduce
system demand).

5. Internet Gopher: The latest copy of the list should be available
from the following Gopher sites:

+ gopher://jupiter.sun.csd.unb.ca/
+ gopher://gopher.univ-lyon1.fr/
+ gopher://ftp.win.tue.nl/
+ gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be
available from the following WWW sites:

+ http://www.gonix.com/pschleck/elmers/
+
http://www.smartpages.com/faqs/radio/ham-radio/elmers/top.html
+
http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.mi
sc.html

The advantage of reading the Elmers list at these sites via WWW
client software is that all URL's are converted to hypertext
links.

see also the newsgroups under comp.infosystems.www.* (I haven't
listed URL's for all of the newsgroups under this hierarchy as
there are now about a dozen of them (!!!).)

How may I contribute to the Elmers List?

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users,
for making this service a success.

STATE FREQUENCY COORDINATOR, TEXAS VHF-FM SOCIETY

(We do the repeater coordinating in Texas.)

I have done HF, Satellites, VHF/UHF, and been in amateur radio for 10
years. I don't know it all, but through my contacts I can find someone
~~~~~~

that can usually answer most of the questions.

I also know of several other coordinators in the US and have contacts through the ARRL and a BBS.

Brian Gilhuly VE3BGB

Brian Gilhuly VE3BGB Author of KENTROL, the ultimate in
rig control/logging/memory mgmt software
brian@kentrol.synapse.net for Kenwood HF rigs and MS Windows
CompuServe: 73257,3131
Tel/fax: +1 613 623-9735 Kentrol Web Page:
http://www.synapse.net/~kentrol/
76 McDonald Street S Kentrol FTP Site:
Arnprior ON K7S 2W5 Canada ftp://ftp.synapse.net/private/k/kentrol/

Kentrol is a Windows 3x control program for Kenwood HF transceivers and the R-5000 receiver, which has built-in logging and memory-management capabilities. Since its introduction in 1991, Kentrol has set the standard for Windows-based rig automation, and new features continue to be added regularly. SkedMan is an automated sked manager for Kentrol. Enter schedule data, set alarms, and when an alarm goes off, SkedMan uses - even launches - Kentrol to tune it in.

Kentrol and SkedMan are shareware, so if you haven't tried them, you are most welcome to do so.

Eran Glago KD6KVO

glago@aol.com

I am into public service, and also ARES/RACES. I am the Emergency Coordinator for both organizations in Sonoma Valley, Sonoma county, San Francisco Section of California.

We do ARES and RACES as one program here, and actually lean more towards RACES because the government entities are so supportive.

I like to encourage newer hams to participate in the events for which I coordinate the communications. It's ideal training for emergency services, and it's fun, too. Codeless Technicians who can't participate on most HF NTS traffic nets have a real role to play here,

as we generally use VHF and UHF, and these amateurs are instrumental with their enthusiasm in filling the rosters.

It's also sometimes a good initiator for those new hams who are self-conscious talking with other, experienced hams one-on-one, but are OK talking formally to a net control station. Similarly, I try to encourage those new hams who became hams so they could talk to their ham spouses, and all you ever hear them do is talk to their spouses and to no-one else. While that's perfectly OK in and of itself, public service is a good way to break out of that mold and get more fun from radio while really helping out.

JPS COMMUNICATIONS, INC.

For those interested, JPS Communications, makers of DSP noise filters and other radio-related products, has a page on the WWW. The URL is:

http://emporium.turnpike.net/J/JPS/jps.html

Also, I'm in the process of collecting links to pages relating to uses of DSP in amateur radio. If you know of some, I'd appreciate hearing about them. There are a lot of people experimenting with new modulation schemes, voice compression, noise reduction, DSP IF techniques, and lots of other interesting applications. I'm planning to add a page with links to this information, so keep an eye out for it, and if you have something to share, please drop me a line.

ARRL LABORATORY ENGINEER

* Radio Frequency Interference (RFI) matters
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters

Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files) are also available from the ARRL info server. Send E-mail to info@arrl.org with the word "HELP" in the message body.

See Scott Ehrlich's entry for information about the ARRL Anonymous FTP Archive and World-Wide Web Home Page.

Richard Hieber DL8MFQ, AA8CP

sz0026@daphne.rrze.uni-erlangen.de
AX.25: DL8MFQ@DB0SIF.DEU.EU

Areas of expertise:

* QRP work
* mobile operation
* computers (DOS, OS/2, Linux)
* Packet Radio
* wire antennas

I am an EE student at the University of Erlangen-Nuernberg, Germany. I am active in the university ham radio club (IG-Funk), spending time and thoughts in improving the permanent club display in the lecture hall building. So I have some first hand experience in making printouts and display arrangements visually appealing.

My main interests are shortwave, especially QRP, and computers (Packet Radio, Internet). I have some experience in shortwave mobiling and considerable success with a modified citizens band whip on the bands from 10 to 20 meters. Generally I am fascinated with simple yet effective equipment, hence my obsession with QRP. I like wire antennas. I feel that over the course of time I will more and more learn to appreciate old ham radio equipment (boatanchors) and get more into homebrewing.

I've compiled a list of QRP Clubs worldwide and a FAQ file for the QRP-L mailing list. They are available from the QRP-L WWW Pages at:

* http://ncc1701-d.cc.nd.edu/qrp-l/index.html
* http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

The QRP-L mailing list is intended to be a relatively noise-free environment for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building.

Jack G.F. Hill W4PPT

MOBILE ANTENNA SYSTEMS AND INSTALLATION (PRIMARILY HF)

* power distribution
* frame grounding
* antenna selection and construction
* mounting the rig
* useful accessories
* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list, with the blessings of Paul Prescott, N1AAC, who took over from Our Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over the rec.radio.amateur.* Working Group mail list, formerly maintained by Ian Kluft, KO6YQ.

The new mailing list addresses are now

* boatanchors@ThePorch.com
* rra-wg@ThePorch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

The new automated list manager address is

ListProc@ThePorch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

ListOwn@jackatak.ThePorch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing your way to hamdom, the cheapskate's approach, let me know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS FRIDAY NIGHT FIST FUNCTION

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq:
80 meters --- 3702.5 khz for all hands.
40 meters --- 7102.5 khz alternate, for all hands
(between the heterodynes, someone scout out a better QRG)

Standard calling signal:
CWIST IMI DE <yourcall> K (if there are no control stations calling for you to check in), or, CWIST DE <yourcall> K (if there is a control station inviting checkins) (The alternative check in for those OTs with salt behind the ears is a simple DE to get the control station's ears followed by DE <yourcall> K when the control station acknowledges.)

Note:
A simple informal net style protocol will generally be used, unless no control station assumes control for the evening, in which case it is an open roundtable format discussion group.

Note:
The midnight local time gathering is designed to maximize the

number of checkins spread out over the world, so less confusion and more checkins are heard. The hope is that someone will be aboard almost anywhere and be heard at least locally, anywhere in the world.

Definition:
A CWIST is a person with an active interest in the PRACTICE and USE of continuous wave radiotelegraphy as directly is applicable to amateur radio. Such PRACTICE and USE may take the form of learning about radiotelegraphy and its history in amateur/commercial areas, its application to radio telecommunication, the practicing of the art and craft of radiotelegraphy, and the refining and developing of the technology of radiotelegraphy.

AUTHOR OF NA4G'S NATIONAL ELECTRICAL CODE FOR HAMS

ABSTRACT

This work was presented as a talk to the Homebrew Special Interest Group (HB-SIG) of the Raleigh Amateur Radio Society (RARS), on 15 January, 1991 and was revised for another presentation on 26 January, 1994.

This document contains excerpts of the National Electrical Code (NFPA 70-1990) that, in the author's opinion, apply to the installation of amateur radio equipment as would commonly be found in most amateur radio stations. Direct excerpts from the Code are contained within inset quotations. Paraphrased excerpts from the Code are itemized. The author's interpretation and discussion of the Code is set full-width. The author's interpretation and discussion of various sections of the Code is not meant to be all-encompassing, nor the official interpretation of the National Fire Protection Association, nor of any official governing body having legal authority of jurisdiction over electrical installations, but is meant to be used as a teaching tool for amateur radio operators.

For ease of access, the group of files have been 'rolled into one' both in tar-compress (862K, for Unix jocks) and PKZIP 2.04g (732K, for MS-DOS users) formats. Both are available from:

ftp://sunsite.unc.edu/pub/academic/agriculture/agronomy/ham/things-to-build/na4g/

PACKET : WB3FFV @ WB3FFV.MD.USA.NA |

HOW TO ACCESS THE WB3FFV AMATEUR RADIO INTERNET BBS !!!

I have placed a BBS system on-line that is mainly oriented towards the
Amateur Community (but there are plenty of other wares on-line).
Through user support I hope to keep the latest and greatest ham
software on-line. The BBS also offers access to nearly all of the
Internet (USENET) NetNews groups, plus access to most Internet
services such as E-mail, FTP, TELNET, Gopher, WWW, Callsign Lookup,
Etc... Below is the information that is needed in order to access the
BBS via Telephone, Telnet, or FTP. Please pass it around to as many
ham's as possible.

System Name: WB3FFV
User Login: bbs

+1 410-361-8170 - 12/24/48/96/14.4/16.8/19.2/21.6/28.8/33.6
(V.32bis,V.32terbo,V.34+,V.FC,HST,V.42bis)

TELNET/FTP - telnet://bbs.abs.net/ (login: bbs)
ftp://ftp.abs.net/

WWW - http://www.abs.net/

Data Settings: 8 Bits, NO Parity, 1 Stop Bit
Times: 24hrs/365days (except for routine maintenance)

Software: UniBoard UNIX BBS Software (Version 2.00b)
Misc. Info: Machine is an Pentium-90/MP running UNIX System V Release 4.2MP
and features more than 9 Gigabytes of on-line file storage.
Most transfer protocols are available!! (multi-line system)

I attempt to keep the latest and greatest HAM software on-line, and
encourage all to upload anything new that they come up with, as it is
of benefit to all. Here is a sample of the software that is available
for downloading:

* KA9Q TCP/IP Software for the PC (Latest OFFICIAL release + TEST
Versions)
* KA9Q TCP/IP for the Atari-ST, MAC, & Amiga
* KA9Q TCP/IP for UNIX based systems
* KA9Q TCP/IP (The NOS release) [UNIX, MS/DOS, Amiga]
* KA9Q TCP/IP (Version by G1EMM, PE1CHL, PA0GRI, Etc.)
* N2GTE Packet Message Switch [GTEPMS]
* WA7MBL BBS for the PC
* W0RLI BBS for the PC
* MSYS BBS for the PC running KISS TNC's
* AA4RE BBS for the PC (plus BETA versions)
* F6FBB BBS for the PC
* G8BPQ PC-Node (Version 4.08)
* Various BBS utilities and enhancements
* Several MORSE CODE Tutors
* TheNet software by NORD><LINK
* Modifications for many HAM Rigs and Scanners
* Digital Signal Processing software (DSP)
* DX and contesting programs

If you are interested in using UUCP to connect to the BBS, this can
also be done as I support Anon-uucp. The login to the system is
'uucpanon', and there is NO password. The listing of available
archives are stored in a file called 'FILES', and it is located in the
/var/spool/uucppublic. To retrieve the files listing just use the
following command:

uucp wb3ffv!~/FILES /usr/spool/uucppublic (ASCII Text)
-or-
uucp wb3ffv!~/FILES.Z /usr/spool/uucppublic (16-Bit Compressed)
-or-
uucp wb3ffv!~/FILES.gz /usr/spool/uucppublic (GNU Gzipped)

This will move a copy of my file listing into your uucppublic
directory.

If you want to access the BBS via Telnet, all you have to do is
access:

telnet://bbs.abs.net/

and login is 'bbs' with no password required.

To use anonymous FTP, just access:

ftp://ftp.abs.net/

and login as 'anonymous' (may not be necessary, depending on your FTP client).

AMPR.ORG IP COORDINATOR FOR MARYLAND SUBNET (44.060.XXX.XXX)

(see James Fay's entry instead for ampr.org IP coordination in Prince George's, St. Mary's, and Calvert Counties)

AUTHOR OF THE QRZ! HAM RADIO CDROM

I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data bfiles, frequency lists, etc., that would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 602 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous ftp server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

The URL is:

http://www.qrz.com/email.html

Register your E-mail address today!

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

Luther M. Lord N4DA

n4da@mindspring.com

If you need a good place to get your amateur radio repaired, I can help. Visit the Radio Doctor's home page at:

http://www.mindspring.com/~n4da/top.html

I will answer all technical questions received via E-Mail at my address above. This service is offered presently at no charge.

Dean R. Madsen KE0WO

Dean R Madsen, KE0WO Computer Science Major
Internet: dmadsen@iastate.edu Iowa State Univeristy
ke0wo@iastate.edu Ames, Iowa
AX25: KE0WO @ KE0WO.#NWIA.IA.USA.NA
Secretary for the Tristate Amateur Packet Association
Treasurer for the Cyclone Amateur Radio Club

A few members of our ham radio club were interested in helping out. Since our turnover is usually 4 years or so (graduation is a horrible thing), I thought it may be difficult for us to keep the list up to date. I thought that by creating a local mailing list called elmers@iastate.edu we could add or remove people as need be. There would always be at least one person receiving mail on that list, usually more! Even after I graduate, this list will be maintained allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience, much repeater experience, in addition to a considerable background in

theory, as many here are electrical engineering or computer engineering students. If a question can not be answered by the readers of the list, there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local disabled hams (or hams to be) get on the air. But anyone local who needed help would find a group at their door ready to work.

Fred O. Maia W5YI

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
Tel. +1 817 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse code training products are also available from every Radio Shack nationwide. Color photograghs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 817 461-4663 anytime, including evenings and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 817 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 800 322-1117.

Will Marchant KC6ROL

marchant@netcom.com

I'm one of the SAREX school group technical mentors. A group of about nine of us are assigned by AMSAT/NASA/ARRL to make sure that the schools selected for dedicated contacts on a SAREX flight are prepared. I'd be happy to try handling E-mail from people interested in SAREX.

73, Paul, KD3FU

- A -

John Ackermann AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for
operation.

This list is <not> intended to replace any of the existing
packet-related mailing lists. Its purpose is provide a medium for
communications among those interested in packet radio networking, both
dealing with technical issues and political/regulatory ones. We'll
discuss things like how the potential 219MHz band will fit into the
networking picture, how to link areas using different networking
schemes, how to set network parameters, etc. The list's charter will
be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by
sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further
details about the Net-SIG (including upcoming conferences).

JOINT AMPR.ORG IP COORDINATOR FOR OHIO SUBNET (44.070.XXX.XXX)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@ag9v.ampr.org

which is a mailing list read by a team of coordinators.

(see also Tony Schliesser)

[Editor's note: All ampr.org coordinators are listed in the document at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/ampr_coordinators

]

Chuck Adams K5FO

adams@sgi.com

MAINTAINER OF STANDARDIZED INFO SHEETS ON QRP RIGS

They are available from the QRP-L WWW Pages at:

* http://ncc1701-d.cc.nd.edu/qrp-l/index.html
* http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

OWNER OF QRP-L MAILING LIST

The QRP mailing list is open for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building, etc.

This list was started by me with an announcement on the rec.radio.amateur.misc USENET group in early 1993. Bruce Walker, WT1M, maintained the mailing lists and FTP area from then through August 1994 on a system at Thinking Machines Inc., think.com. Then it was moved to qrp-l@netcom.com until May 14th, 1995. Thanks to Mike Ardai, N1IST, for all his hard work during the time that QRP-L was on netcom.com.

I am still the keeper of the non-electronic archives, including copies of some schematics, etc. Contact me directly or watch this list for more info.

To subscribe, send E-mail to:

listserv@lehigh.edu

and in the body of the message, write:

SUBSCRIBE QRP-L your_name your_call

where "your_name" is your real name, and "your_call" is your callsign, if any. For example:

SUBSCRIBE QRP-L John Doe K5FJZ

A welcome message with more detailed help will follow shortly.

To unsubscribe, type:

UNSUBSCRIBE QRP-L

Edward Addy KE0EG

eaddy@nacec.org

EXECUTIVE DIRECTOR, NORTH AMERICAN CENTER FOR EMERGENCY COMMUNICATIONS

After a large disaster strikes your community and your family, I am sure you will agree that its a little late to start building a massive rapid response, emergency communications system supported by thousands of people within companies, organizations and serving as volunteers to provide essential support services.

We are the North American Center For Emergency Communications Inc. (NACEC), a federally-registered non-profit organization serving North America since 1992. We have been developing a system that merges many different technologies to create a unique, high-capacity, rapidly-deployable solution to the problem of communications outages and shortages that occur following a large disaster. Our volunteer network in using the Internet as its communications backbone, is itself using one of the many technologies employed in NACEC's overall solution.

To help ensure the greatest possible effectiveness in as many communities as possible throughout North America, we are developing a very large volunteer network of community volunteers (Community Ambassadors) who work with our staff and their local communities. If you are community active and are interested in helping, we need your help, NOW. Please, don't wait until disaster strikes, help us to be prepared and be ready to assist your community.

The more communities that are represented by our volunteer network, the more effective we can be in disaster preparedness, emergency operations and in the area of emergency and military family message handling and delivery.

As a NACEC volunteer (Community Ambassador) you will assist with the movement of information that is vital to the continued success and growth of this organization and the survivability of your family and your community following a large disaster.

This project is growing rapidly, as we locate and add new dedicated volunteers from as many communities as possible from across North America. I hope you will join us in making this organization a

success.

To find out more about how you can get involved in this project and use your Internet skills to help your community, please review the information that is in our WWW Homepage area which can be found at:

http://www.winternet.com/~nacec/index.html

An electronic volunteer application form can also be found there as well. Should you have any questions, please address them to my E-mail address above.

AUTHOR OF THE FOLLOWING MS-DOS HAM PROGRAMS:

* AutoExam - Examination simulator and study aid
* AutoCW - Morse Code practice program
* DOSGATE - allows users to run programs on your PC remotely (AutoExam compatible)
* AutoCall - Allows use of the Buckmaster HAMCALL CDROM online callbook with DOSGATE
* AutoFax - Allows reception of weather fax using Kantronics TNC's
* SeeSats - Real time satellite tracking (text only), DOSGATE compatible

Most of these programs are available via anonymous FTP from:

* ftp://oak.oakland.edu/SimTel/msdos/hamradio/
* ftp://wuarchive.wustl.edu/systems/msdos/msdos/hamradio/

or write me at:

7 Redfield Circle
Derry, NH 03038

and enclose:

* A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5"
or 5.25").
* A Self Addressed STAMPED return diskette mailer.
* A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

For further information about the Callbook Server, please consult the
server's help facility, the rec.radio.amateur.misc FAQ, or additional
server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have
talked with me via E-mail know that. But this time I've actually
started on my rewrite of the callsign server at Buffalo. And I've
finally got a design that I'm happy with. The new searching
capabilities are going to be *much* improved over the current system.
I'll be getting rid of the bugs in the current telnet system and
making it available to more people. Also coming is a WWW front-end for
web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database
look-up system. The old system was very specific to the FCC database
format because that's all that was available when it was written (yes,
the server is very, very old). But now there are a number of databases
floating around the net for different countries and I am rewriting the
system to be more flexible and to accommodate a variety of formats and

search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Look for the new server in two or three months. Until then you can access the current one.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

My electronics expertise is mostly analog, but I have some insights into DSP applications that can do better in what used to be the analog dominions. I can be of the most help with low-frequency analog stuff, particularly measurements and low-level/low-noise/low-distortion applications. I breadboard with IC's, discretes, and surface mounts (which I prefer to use now, as surface mounting requires less drilling of PCB boards once they are etched). My electrical engineering education (Ph.D.) emphasized control systems. I also have a clear understanding of transmission line measurements and behavior (a personal research interest for the last 25 years or so).

Barry Buelow WA0RJT

Barry Buelow WA0RJT Packet BBS in Cedar Rapids, IA
barry@ia.net WA0RJT@WA0RJT.IA.USA.NOAM

The Tuscon Amateur Packet Radio (TAPR) Bulletin Board Special Interest Group (BBSSIG) is sponsoring a working group to generate and distribute a series of information bulletins which will serve to instruct packet radio users in a variety of areas. These bulletins will be distributed via the packet network and can be retained at each BBS in a file area. An index will be provided to allow users to find information they desire.

If you are interested in actively participating in this effort and can work on a collaborative effort, please speak up. Send a message to my E-mail address above.

[Editor's Note: As this project is still very much a work in progress, and its eventual products will certainly be made available via several information sources (including the Internet) as soon as they are completed, I'm sure Barry would appreciate it if only serious volunteer contributors contacted him at this time.]

MAINTAINER OF LIST OF PERIODICALS OF INTEREST TO QRP ENTHUSIASTS, ELECTRONICS BOOKS OF INTEREST TO QRP ENTHUSIASTS, AND ANTENNA BOOKS OF INTEREST TO QRP ENTHUSIASTS

Available from the QRP-L WWW Page at:

http://ncc1701-d.cc.nd.edu/qrp-l/index.html

Since QRP-L has moved to lehigh.edu, the articles will also appear at this address on or about June 1, 1995:

http://www.lehigh.edu/lists/Archives/qrp-l/

(Note: the "A" in Archives is capitalized.)

Please direct all submissions, feedback, and administrivia for these articles to my E-mail address above.

I serve as an Educational Advisor to ARRL and hence fall within the loose bounds of their field organization. I know something of the fundamentals in electronics, having written the current Chapter 6 of the 1995 ARRL Handbook, and something of antennas, with a series

appearing in Communications Quarterly. I serve on the Board of Directors of 10-X International and maintain memberships in most of the QRP organizations, as well as the Quarter Century Wireless Association (QCWA). As to what I do not know, there are no limits.

I also know something of the craft of technical writing and editing, being director of Techwright, an occasional consulting operation in this field with my wife, Jean, N4TZP, who has been a technical editor and writer since 1980.

Arthur Chandler KO6OA

arthurc@crl.com

BayMOO, an all-text virtual-reality on the Internet (a form of Multiple-User Dungeon, or "MUD") has just completed an amateur packet radio simulation "room." This room can serve to help orient non-hams, or non-packet-operating hams, to some of the operating conventions and experiences of amateur packet radio networks.

BayMOO may be accessed from:

telnet://baymoo.sfsu.edu:8888/

When you log into BayMOO, just follow the instructions ("HELP," "MOVEMENT," and "HELP COMMUNICATION" will give you most of the basics.) To go to the packet radio simulation room, type:

@go Virtual Ham Central

You will need to contact "Akira" or "Dr.J" in the room to get transmission privileges.

You may use BayMOO with guest privileges by using your callsign as your guest login name (if you have one). If you want a permanent login, write to:

rk@world1.worldbit.com

giving your callsign as your username.

GRAPES 56 KBAUD PACKET RADIO MODEMS

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
PO Box 636
Griffin, GA 30224-0636

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

(see also Bob Merritt)

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

RELAYER OF AMATEUR RADIO NEWSLINE BULLETINS

Amateur Radio Newsline is produced as an audio service by Newsline, a service of the Westlink Radio Network. The transcribed version is produced by Dale Cary, WD0AKO from materials provided by Newsline, and is jointly distributed to online services and bulletin board networks by Steve Coletti and Dale Cary.

Copyright owner is Newsline. Permission to reuse all or part of either this written or the audio form requires that the item be taken in its entirety, not be subject to any further editing or commentary, and that full credit be given to Newsline as the source.

Permission is granted to all amateurs who want to transmit the audio version in its entirety over nets or repeaters. The text version may be used for packet distribution as long as it is sent in its entirety and the BIN header is kept intact.

NOTICE: When Newsline is transmitted in its full form over voice or digital forms of Amateur Radio, it is recommended that the closed circuit advisory be deleted. Audio, Computer, and Packet retransmissions must be made without the editing or deleting of any other part of the Newsline content. Unauthorized additional commentary to the original message is also prohibited. To do so is a violation of
~~~~~~

copyright and subjects the initiator to legal action by Newsline.

Newsline may also be excerpted for code practice transmissions, and may be used as a reference source in bulletin board discussions under acceptable Fair Use practices.

Any other use is not allowed without the expressed permission of Newsline.

Editorial comment, news items and all other business should be directed to

Bill Pasternak, WA6ITF, Newsline's Producer and Editor-In-Chief.
E-Mail - 3241437@mcimail.com or BILLWA6ITF@aol.com

William (Bill) Coyle N3OGH

wcoyle@dccc.edu

AX.25: N3OGH@AA3CH.EPA.USA.NA

My primary experience is with HF communications, particularly with the Kenwood TS-830S and TS-940/AT. My preferred mode is CW, although I also use SSB. I have had experience with light service on both rigs (including the internal antenna tuner on the 940 and the tube finals on the 830). I have the service manual for the 940.

I am particularly interested in helping new hams design and set up HF stations with multi-band wire antenna arrays.

Other than HF, I am also involved in VHF and UHF, particularly 2 meters, and have recently gotten involved in packet radio (having gained some experience on the hardware end of setting up such a station).

mattd@branson.org -- send here first, please!
mdaless@ocf.berkeley.edu

I cannot claim to be an expert in any field, but I did participate in SAREX as the project coordinator for our school (The Branson School) in the STS-64 mission. I will be happy to help anybody else who is interested in any and all aspects of the SAREX project. I also know a little bit about UNIX administration, but I find myself asking questions more often than answering them.

I am a high school senior, so my real area of expertise is getting young people involved in ham radio. I was a speaker at the Dayton HamVention Youth Forum, and am active in recruiting in my local community.

OWNER OF THE LAND-MOBILE-RADIO MAILING LIST

The purpose of this list is to allow discussion about commercial
land-mobile radio equipment, its use and maintenance.

OWNER OF THE MILITARY AFFILIATE RADIO SERVICE (MARS) MEMBERS MAILING LIST.

The purpose of this list is to allow discussion about MARS (Military
Affiliated Radio Service) activities. The list is open to all branches
of MARS.

To subscribe to or unsubscribe from either of the above lists, please send electronic mail to:

listserv@stat.com

and include the command:

subscribe list-name

or

unsubscribe list-name

as the first line of your message, where list-name is either land-mobile-radio or mars-list. An acknowledgement/welcome message should follow very shortly.

MODERATOR OF REC.RADIO.INFO NEWSGROUP

Please direct all rec.radio.info submissions to rec-radio-info@stat.com and all feedback and administrivia to rec-radio-request@stat.com.

Scott Ehrlich WY1Z

Scott Ehrlich, Internetworking ASM, Eastern Mass.
E-mail: wy1z@ehrlichtronics.com

Web: http://www.ehrlichtronics.com
Boston ARC ftp archives: ftp://ftp.barc.org/pub/hamradio/

I've played around with Mac and PC hardware, as well as dabbling a
little with DOS, UNIX, and MacOS.

I co-maintain the Boston Amateur Radio Club anonymous FTP file
archives with Phil Temples, K9HI (k9hi@netcom.com).

A sampling of the archives include:

A VIRTUALLY COMPLETE ARCHIVE OF ALL ARRL BULLETINS SINCE 1992 IS AVAILABLE
AT:

ftp://ftp.barc.org/pub/hamradio/barc/w1aw-list/

A MIRROR OF ALL FILES AVAILABLE FROM THE ARRL INFO SERVER IS ALSO AVAILABLE:

ftp://ftp.barc.org/pub/hamradio/arrl/infoserver/

THE ARRL INFOSERVER MIRROR HAS FCC PART 97 (U.S. AMATEUR RADIO SERVICE RULES
AND REGULATIONS) AT:

ftp://ftp.barc.org/pub/hamradio/arrl/infoserver/rib/part97.txt

PROGRAMS MENTIONED IN QST ARE IN:

ftp://ftp.barc.org/pub/hamradio/arrl/qst-binaries/

AMATEUR RADIO NEWSLINE IS NOW ALSO BEING ARCHIVED, TOO:

ftp://ftp.barc.org/pub/hamradio/docs/newsline/

MACINTOSH AMATEUR RADIO SOFTWARE ARCHIVE:

ftp://ftp.barc.org/pub/hamradio/mac/

HAM RADIO AND MORE, THE RADIO SHOW CARRIED LIVE EVERY SUNDAY (6PM - 7PM EST)
ON THE TALK AMERICA RADIO NETWORK, NOW HAS A WORLD-WIDE WEB HOME PAGE:

http://www.barc.org/barc/ham-more/ham-more.html

THE BOSTON AMATEUR RADIO CLUB ALSO HAS A WORLD-WIDE WEB HOME PAGE:

http://www.barc.org/barc.html

DUE TO THE POPULARITY OF THE KY1N VE LISTING AND W1GSL'S HAMFEST LIST, I HAVE
INCORPORATED BOTH OF THESE LISTINGS INTO THE BOSTON AMATEUR RADIO CLUB'S WEB
PAGE:

http://www.barc.org/barc/ne-happenings.html

The Boston Amateur Radio Club World-Wide Web Home Page is now
maintained by Mike Ardai. See his entry for more information.

The American Radio Relay League (ARRL) World-Wide Web Home Page has
now moved to ARRL HQ. See David Newkirk's entry for more information.

You will need Lynx, WWW, or Mosaic to view them (or you may obtain a copy of the page via E-mail; send a message to listserv@info.cern.ch with the word

help

in the body for more information). Ask me for more details about this.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 05/2330Z DECEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 05 DECEMBER AND FORECAST FOR 06 DECEMBER - 08 DECEMBER

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 74/11

GOES satellite data for 04 Dec
Daily Proton Fluence >1 MeV: 6.1E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 2.6E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
06 Dec 07 Dec 08 Dec
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 06 Dec: 73/9

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 04 Dec
Learmonth 4 2112 1211
Fredericksburg 4 18
Planetary 4 17

Observed Kp for 04 Dec: 4534 2111
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
06 Dec 5 quiet
07 Dec 5 quiet
08 Dec 5 quiet

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

05 Dec Normal Fair-normal Fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
06 Dec Normal Fair-normal Fair
07 Dec Normal Normal Normal
08 Dec Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
05 Dec -13

Observed Australian Regional MUFs:
Townsville:15-30% depressed 00-02UT and 11-15UT, near normal
otherwise.
Sydney: 20-30% depressed local daylight hours, with spread F
observed local night.
Hobart: 15-30% depressed on most of the day, with blanketing
sporadic E observed at 01UT 03-04UT.

Predicted Monthly T index for December: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
06 Dec 0 near predicted monthly values to slightly
depressed.
07 Dec 5 near predicted monthly values
08 Dec 5 near predicted monthly values

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve6tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet,
as well as system administration of UNIX and UNIX-like operating
systems (with an emphasis on networking, E-mail, etc.).

MAINTAINER OF THE INTERNET DX MAILING LIST

To subscribe, send an E-mail request to:

dx-REQUEST@ve7tcp.ampr.org

with the following line in the message body:

subscribe dx

I also maintain an amateur radio related WWW page at:

http://ve7tcp.ampr.org/

It focuses primarily on Contesting, DXing, and technical matters.

David Newkirk WJ1Z

webmaster@arrl.org

AMERICAN RADIO RELAY LEAGUE (ARRL) WEBMASTER

The American Radio Relay League is pleased to announce the startup of
ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams, carrying ARRL news, details on upcoming hamfests, conventions and Amateur Radio examinations, the ARRL Publications catalog, information of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and maintained at oak.oakland.edu. Their volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger and better are *essential* to its ongoing success, so please drop by and say hello!

Bob Nielsen W6SWE

TUSCON AMATEUR PACKET RADIO (TAPR)

I am no longer a TAPR officer, but try to help out with the TAPR file server and am the "official" contact person on the Internet and CompuServe (71540,2364).

To access the TAPR file server, send E-mail to:

file-request@tapr.org

To get the help file and a list of available files, send the following commands in the body of the message:

help
dir
quit

All mail sent to that address is not read by a human. Conversely, mail sent to tapr@tapr.org is read by a human who will be glad to take your orders or process membership applications, but cannot send you file server files.

Joe Nobody N0CALL

nobody@nowhere.nodomain

REC.RADIO.AMATEUR.MISC FREQUENTLY ASKED QUESTIONS (FAQ)

Available from:

* http://www.smartpages.com/faqs/radio/ham-radio/faq/top.html
* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/faq/
* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq/

Currently the posting of these articles have been suspended indefinitely (and will probably be removed from the above sites shortly). New editors are being actively sought to take over maintenance of the above resources and keep them from disappearing from the net permanently. As with any volunteer effort, new volunteers are often needed. We need new editors to post the above FAQ's. Preferably this should be someone who has enthusiasm for hobbyist radio, experience with Usenet, and the ability to work with the other editors. No single person can know all the various aspects of these diverse hobbies so the editorial review groups are intended to make a greater combination of experience. A new maintainer is desired at this time to provide a fresh outlook as well as the opportunity to train new volunteers and avoid overreliance on a small group of people.

The FAQ's were posted with the auto-faq software, which is written in Perl (see Paul Schleck's entry). So it would be a plus for volunteers to post the FAQ to have Perl installed on their system and be able to use "cron" or "at" so that postings can go unattended.

With widespread net acceptance and use of the World-Wide Web, it might be desirable to rewrite the FAQ as a minimal "pointer" article with URL links. Such a minimal FAQ would reduce maintenance burdens, ward off criticism of the document for being "too big," and could be maintained as Hypertext Markup Language (HTML) at a WWW site, then "dumped" to an ASCII file for posting to news (to cover users who don't use WWW, as well as to actually feed a couple of automated FTP, Gopher, and WWW sites. Such an approach is used for the Elmers list; see the companion posting to this file, "Amateur Radio: Elmers List Info and Administrivia" for more information).

Anyone who wants to make their contribution to the Net as a volunteer should contact the Elmers Directory maintainer at elmers-request@gonix.com.

W. David (Dave) Paperman WQ5Y

wpaperman@msmail.his.tch.tmc.edu

P.O. Box 7039
Cut 'n Shoot, TX 77303-0039
(H) +1 713 592-8636 (6pm to 9:30pm Central Time)
(W) +1 713 770-1836 (6:30am to 3:30pm Central Time)

I have a collection of service information and literature dating back
to the 1920's. I will be happy to assist those needing copies of
out-of-copyright information for specific makes and models of
receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of
all types. Unfortunately I have not taken the time to catalog all this
information, but it is logically filed by make, model, etc.

If you need service information for a specific piece of equipment,
(and I have the information in my collection) I will research and copy
it for you. Cost will vary depending on the time required to find the
information and the amount of pages to be copied. I estimate 10 pages
or less at $1.00 US/page including US postage. I will quote on larger
manuals.

This is NOT my career or a business. Any requests must be prepaid or I
will ship COD at additional postage costs.

Bruce Perens AB6YM

perens@hams.com

MAINTAINER OF LINUX FOR HAMS CDROM

What Is Linux for Hams?

Linux for Hams is a full-featured Linux system with special additions for Amateur Radio. The system includes all of the sophisticated software that one would expect on one of today's engineering workstations, along with software for packet radio communication, electronic design, printed-circuit manufacture, a database of FCC rules and license exams, a code-practice program, and other Amateur Radio applications.

The general-purpose software includes software for connecting to the Internet, compilers for the C and C++ languages, a full-featured typesetting system, a symbolic mathematics program, CDROM authoring tools, and many other programs. Unlike other Amateur Radio software collections, Linux for Hams is an integrated system. The programs are already compiled and configured to work together with the rest of the system.

Linux for Hams is being built by Bruce Perens AB6YM, with the help of several volunteers. Of course, it builds on the work of the thousands of volunteers who helped create Linux and the other programs it contains.

The system will be available for free if you download it using FTP. A low-cost CD will be available, for about $30 US.

FREE CDROM SUBSCRIPTION FOR VOLUNTEERS

Most of the software in Linux for Hams is free software, contributed by its author for anyone to use. I would like to compensate those authors for their work. If you are the author of a significant piece of software included in Linux for Hams, please E-mail to Perens@Rahul.net. You may be be able to get a free CDROM subscription to Linux for Hams.

Bruce Perens AB6YM reserves the right to decide who gets free subscriptions, what is included in a free subscription, and for how long those subscriptions last.

For more information about Linux for Hams, check out the WWW page:

http://www.hams.com/perens/LinuxForHams

or send E-mail with the word "help" to:

info@hams.com

AMSAT-NA LIFE MEMBER #2109

I am the AMSAT coordinator for the Portland, Oregon area and I do a lot of the "Elmering" in this area as well as steering people toward others.

This would be for satellites only, as I am not doing HF anymore.

I am currently set up for all of the digital and analog satellites, all modes including AO-13 Mode S and weather sats.

I would be happy to assist people with getting started and beyond in all areas of satellite operations.

Henry Ruh KB9FO

atvq@aol.com

AMATEUR TELEVISION QUARTERLY (ATVQ) MAGAZINE

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can try to answer questions on here, and frequently do, but time is expensive and limited!

John Rymell N3PFF

ryme@husky.bloomu.edu
Bloomsburg University
Bloomsburg, PA

Over 25 years in electronic/computer service work. Enjoy designing, building and operating vacuum tube and solid state equipment. Experienced in wire antenna and tuners, SWL, and Amateur Radio. Have real enthusiasm for building just about anything from next to nothing (:^)! Glad to help those in need.

Bob Salnick, Spokane,WA | UUCP: oliveb!isc-br!tau-ceti!DejaVu!salnick
Amiga 1000, WB 1.3 | INTERNET: salnick@DejaVu.spk.wa.us
WA9BVE |

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/ understanding at the burn-your-hand-with-a-soldering-iron level - is drifting out of ham radio. With Japanese radios which cost so much, fewer and fewer hams are willing to risk their warranty to service their own equipment. I would like to see a turn-around here...

Internet Services (Finding FAQ's, using Usenet, FTP, telnet, Archie,
FTP mail-servers, mailing lists, etc., etc.)

Club Activities, Examinations, and other events in the Omaha/
Lincoln/Council Bluffs (Eastern Nebraska/Western Iowa) area.

Also willing to provide newsreader kill/select file help to anyone
interested in customizing their presentation of the rec.radio.*
newsgroups

I would be particularly interested in mentoring/training new FAQ/Info
maintainers for the rec.radio.* newsgroups (see also Jack Hill and Joe
Nobody for FAQ maintenance opportunities and the rec.radio.amateur.*
Working Group mailing list). To paraphrase Zack Lau, I can't post it
all myself!

I have taken over maintenance of the Perl-based auto-faq FAQ management and posting package from Ian Kluft and would be happy to guide new FAQ authors in its use. The latest version, 3.2pl2, is available via anonymous FTP from:

ftp://ftp.novia.net/customers/pschleck/auto-faq/

The auto-faq-users mailing list has also been re-sited at Novia. To subscribe, send E-mail to auto-faq-users-request@novia.net

with:

subscribe auto-faq-users

in the message body. An acknowledgement message will follow shortly. To unsubscribe, replace the above command with:

unsubscribe auto-faq-users

Recently I undertook some academic research into packet radio using KA9Q's Multiple-Access/Collision Avoidance (MACA) link-layer protocol. I attempted a literature survey as well as some software simulations of the protocol (with varying degrees of success). I would welcome any opportunities to improve on my work, find out about any actual MACA implementations, share information, and build on my bibliography (available on request). More information about MACA may be obtained from:

ftp://ftp.ucsd.edu/hamradio/packet/arrlcnc/1990/

I'm certainly willing to be an Elmer if there's a need. I hope I've learned a few things since 1966 when I first went on the air. :-) Here's a list of subjects I might be able to help with:

* Combining amateur radio and flying
* Antennas
* Civil Air Patrol

* General Operating Practices
* Older (Tube) Equipment
* Test Equipment and Measurements

Dave Stine WA2JTA/6

dstine@cisco.com

My areas of expertise are:

* vacuum tube amps, receivers, exciters
* CW operating tips
* wire antenna tips, hints & kinks

David Stockton GM4ZNX

dstock@hpsqf.sqf.hp.com

* SWL since 1960
* Licensed since 1984 (UK full class A)
* Degrees in electronics&comms and digital techniques etc.
* Currently senior design engineer doing RF design

* Fairly broad interest in amateur radio (but not contests!)

* Antennas, Transmission lines,filters from fundamental theory to
practice
* Receiver structures and circuits from simple to state of the art.
* Transmitters, ATUs
* Test equipment
* Wide experience of troubleshooting/repairing equipment.
* Professional experience of EMC/RFI
* QRP
* UK Operation and Licensing

* My morse is flaky, but I keep working on it
* No interest in contests
* No interest in packet radio or in fixing computers

Just wrote the new oscillator and synthesiser chapter for the 1995
ARRL Handbook. Also co-developed (with G3ROO) a robust phase-locked
summing loop circuit to replace the common mixer-filter LO frequency
adder. A technical article describing the project was recently
published in RADCOM.

ARRL TECHNICAL INFORMATION SERVICE COORDINATOR (TIS@ARRL.ORG)

ARRL E-MAIL INFORMATION SERVER SYSOP (INFO@ARRL.ORG)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available

locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many amateur radio informational documents are also available from the ARRL E-Mail Information Server (or Info-Server for short). To find out how to use the Info-Server, send E-mail to info@arrl.org with any subject (it is ignored) and the following text in the body of the message:

==========
This message does not constitute any official or unofficial statement or
policy of American Turnkey or any other organization, corporation or
institution.

I just upgraded to Advanced, and am now working on Extra. Was first
licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when the baby is asleep, so the XYL demands silent running. Besides, with my wimpy wire, there is little point in trying to run voice.

Jim Walsh W7LVN

jwalsh@efn.org

Quarter Century Wireless Association, Inc. (QCWA), headquartered in Eugene, OR, is pleased to announce the QCWA World-Wide Web Home Page, available by either text or graphics browser at:

http://www.efn.org/~qcwa/

Membership in QCWA, a not-for-profit 501(c)(3) corporation, is open to any radio amateur licensed today AND also licensed 25 years or more ago (there is NO REQUIREMENT for continuous licensing over this time period -- if you received your first ham license on or before January 1, 1970, you're now eligible). Included on the Web page are:

* Photos, biographies, addresses and phone numbers of QCWA 1995-1996 Officers and Directors
* Database of local Chapters (nearly 200, worldwide), including name, address, and callsign of Chapter Secretary
* Listing of on-the-air Chapter meetings
* Details of upcoming National Convention -- with photos, as soon as we receive them
* A few words about the quarterly QCWA Journal (we hope soon to have excerpts from Editor Barry Wiseman's new, improved Journal available to you on the Web)
* Rules and schedule for QCWA Phone and CW QSO Parties
* QCWA Memorial Scholarship Program
* Criteria for and recent winners of QCWA Awards
* A Photo Tour of QCWA Headquarters and W2MM/7 memorial station (soon to display a spiffy new IC-738 . . . THANK YOU, ICOM!)
* Links to other interesting ham-related Web sites

Please visit QCWA on the Web . . . and take a moment to E-mail me with your comments, corrections, and suggestions at my E-mail address above. If you administer a ham-related Web site, QCWA would appreciate a Link from your page. We're 12,000-strong -- worldwide -- and growing! Come join us!

QUARTER CENTURY WIRELESS ASSOCIATION

(see also Jim Walsh)

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (the Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/amsat/AmsatHome.html

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT NEWS SERVICE

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your

local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT BULLETIN BOARD

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - KEPLERIAN ELEMENTS MAILING LIST

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA RELATED INFORMATION MAILING LIST

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - SHUTTLE AMATEUR RADIO EXPERIMENT MAILING LIST

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be

processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

Conway Yee N2JWQ

yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

MAINTAINER OF THE UNIVERSAL AND FREE LISTING OF REPEATERS FOR RADIO AMATEURS

This listing with all the data is available for anonymous FTP from:

ftp://mipgsun.mipg.upenn.edu/pub/yee/rptr010.Z

An experimental search and submission front-end is available at:

http://www.acs.ncsu.edu/scripts/HamRadio/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my intent is to make sure it stays that way. For this reason, I have applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and is not limited to the US. This reflects the intent to make this directory universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipgsun.mipg.upenn.edu/pub/yee/uploads/

or via E-mail to yee@mipg.upenn.edu

The data format has not been changed from the old format so contributions that you were planning to make (prior to my recent troubles) are still current and most welcome. This repeater listing will be of use if people take an active part in making it accurate and useful.

AMATEUR RADIO: ELMERS LIST QUICK-SEARCH INDEX BY SUBJECT

(Note: This index is not necessarily all-inclusive and some Elmers are
listed more than once.)

AMATEUR RADIO EMERGENCY SERVICE (ARES)/RADIO AMATEUR CIVIL EMERGENCY SERVICE
(RACES)

* Chilton (EMA Radio Officer)
* Glago (Sonoma Valley, CA ARES and RACES Director)
* Humphries (ex-Asst. EC)
* Stader (EMAS SEC)

AMATEUR SATELLITE CORPORATION (AMSAT)

* Williamson, P (WWW Page, Anonymous FTP Archive, and Mailing Lists)
* Roth (Portland, OR Area Coordinator)

AMATEUR TELEPRINTER OVER RADIO (AMTOR)/PACKET TELEPRINTER OVER RADIO
(PACTOR)/RADIO TELETYPE (RTTY)

* Sayer (also decoding CHU's ASCII time code)

AMERICA ON-LINE

* Ruh (ATV Quarterly Representative, Ham Radio Manufacturers and
Dealers Section)
* Stader (Host and Manager, Ham Radio Club Forum)

AMERICAN RADIO RELAY LEAGUE (ARRL)

* Bloom (QEX Editor, ARRL CNC Contact)
* Cebik (Educational Advisor)
* Cira (Los Angeles, CA ACC)
* Ehrlich (EMAS Internetworking ASM)
* Elmore (CO TC)
* Goldstein (Volunteer Counsel - Florida Only)
* Halle (Phoenix, AZ Area Official Observer Coordinator)
* Hare (Laboratory Manager)

* Hill (TN TS)
* Jahnke (VEC Manager)
* Lau (Technical Consultant)
* Newkirk (Webmaster, HQ WWW Page)
* Redding (Educational Advisor)
* Sefranek (EMAS TA)
* Stader (EMAS ASM and DEC)
* Tracy (InfoServer Sysop, TIS Coordinator)
* Turner (Volunteer Counsel)

ANTENNAS

* Brewer (wire HF)
* Brubaker (HF)
* Cebik
* Coyle (multi-band wire HF)
* DePolo (Design/Theory)
* Elmore
* Graham (wire HF for apartments)
* Halbert (simple designs)
* Hieber (wire)
* Hill (Mobile, including HF)
* Humphries (VHF and multi-band wire arrays)
* Myers (and transmission lines)
* Ornitz (including computer modelling)
* Rymell
* Salnick
* Salyzyn
* Sefranek (and Transmission Lines)
* Silva
* Standerfer
* Stine (wire HF)
* Stockton
* Taylor
* van de Kerk (HF Low-Profile)
* Zurn (wire HF)

ANTIQUE AND OLDER EQUIPMENT

* Bellville
* Brewer (40's-70's)
* Hill (Mailing List)
* Keys (including HF and CW)
* Paperman (Manuals, Service Information, and Literature)
* Standerfer
* Turner (including Kenwood and Ten-Tec)

APPLE MACINTOSH COMPUTER

* Bellville
* Ehrlich (including Amateur Radio Software FTP Archive)
* Seney (Macnet, including Anonymous FTP Archive and WWW Page)

* Stader (List of Amateur Radio Software)

BATTERIES

* Myers
* Hammill (Sealed Lead-Acid)
* Sefranek (including Solar Operation)

BULLETIN-BOARD SYSTEMS (BBS'S)

* Bertolino (Trance - Italy)
* Cira (HAM*INFO*LINK*SOURCE*BBS)
* Gathergood (CQ Centre - United Kingdom)
* Leadmon (WB3FFV)
* Meredith (F6FBB Packet BBS Support)

CALLSIGN DATA/NATIONAL TECHNICAL INFORMATION SERVICE (NTIS)

* Carruth
* Lloyd (QRZ! Ham Radio CDROM and Callsign/E-mail Registry)

CIVIL AIR PATROL (CAP)

* Moore
* Standerfer

COLLEGE CLUBS

* DePolo (Technical Director, Univ. of Pennsylvania ARC)
* Edwards (Univ. of Maryland ARA)
* French, et al (Ham-Univ Mailing List)
* Hieber (IG-Funk, Univ. of Erlangen-Nuernberg, Germany)
* Killebrew (Trustee, University of Houston Amateur Radio Club)
* Madsen, et al (Iowa State Elmers)
* Schleck

COMMERCIAL EQUIPMENT

* Bellville
* DePolo
* Dodell (Mailing List)
* Veres (Commercial Radio through 12 GHz, UHF and 2.5 GHz ITFS TV)
* Wier (ICOM Mailing List)

CW (MORSE CODE)

* Bono (AutoCW)
* Elmore
* Hill (learning hints)
* Keys (including CWIST HF CW Net)
* Salyzyn
* Silva
* Stine
* Stockton
* van de Kerk

* Zurn (including European abbreviations)

DIGITAL SIGNAL PROCESSING (DSP)

* Bloom
* Bruhns
* Edwards
* Gilliver
* Hall (including WWW Page)
* van Vliet (Filters, including Integrated, Distributed, Lumped, and Active)

EQUIPMENT TESTING/TROUBLESHOOTING

* Brewer (Tube Gear)
* Bruhns (Low-Level/Low-Frequency Analog and Transmission Line Measurements)
* Coyle (Kenwood TS-830S and TS-940/AT Service)
* DePolo
* Elmore (Troubleshooting)
* Hare (ARRL Laboratory Manager)
* Lord (including Radio Doctor's WWW Page)
* Myers
* Ornitz (Instrumentation)
* Paperman (Manuals, Service Information, and Literature)
* Rymell (Electronics and Computer Service Work)
* Salnick
* Salyzyn
* Sefranek (including Power Supplies and Amplifiers)
* Seney (Digital Storage Scope FAQ)
* Standerfer (Test Equipment and Measurements)
* Stockton
* Taylor
* Veres (Commercial Radio through 12 GHz, UHF and 2.5 GHz ITFS TV)
* Witte (Instrumentation)

FREQUENTLY ASKED QUESTIONS (FAQ's)

* Adams (QRP Rig Standardized Info Sheets)
* Bowen (Supplemental FTP Archives, Internet Callbook Server)
* Cebik (QRP Periodicals, Electronics Books, and Antenna Books Lists)
* Cheeseman (Australia)
* Dodell (rec.radio.info Newsgroup)
* Ehrlich (World-Wide Web)
* Goldstein (Packet Radio WWW Server, including Packet FAQ)
* Hieber (QRP Clubs and QRP-L Mailing List)
* Hill (Antennas)
* Jahnke (VE Exams Scheduled)
* Lloyd (QRZ! Callsign/E-mail Registry)
* Nobody (General)
* Ruh (Amateur Television)

* Seney (Digital Storage Scopes)
* Stader (Macintosh Amateur Radio Software)
* Turvey (United Kingdom)
* Williams (Amateur Radio WWW Server)
* Woods (Mail-Order Electronics)
* Yee (Online Repeater Directory)

GEORGIA RADIO AMATEUR PACKET ENTHUSIASTS SOCIETY (GRAPES)

* Coffman (E-mail Contact)
* Merritt (WWW Page)

HANDICAPPED OPERATING

* Gilliver (Blind Issues)
* Madsen, et al

HIGH FREQUENCY (HF)/CONTESTING/DX

* Bertolino (425 DX News and IOTA WWW Page)
* Brubaker
* Chilton
* Coyle (including Station Setup for New Hams)
* DePolo
* Elmore (DX'ing, Contesting, and Propagation)
* Gilbert
* Hill (Mobile)
* Kumagai (CQWW Committee Member, JIDX Committee Chairman, Japanese DX Contest Mailserver and Mailing List)
* Madsen, et al
* Nerenberg (DX Mailing List)
* Salnick
* Silva
* Simpson (Best of 75 Net)
* Tidd (DXCC Databases)
* van de Kerk (CW, Low Profile)
* Veres
* Zurn

HOMEBREWING/DO-IT-YOURSELF

* Bruhns (including Low-Level/Low-Frequency Analog, DSP, Surface Mounting, and Transmission Lines)
* Carruth (Digital Design, Software)
* Chilton
* DePolo
* Edwards (including DSP)
* Elmore (Construction Practices)
* Gilliver (DSP, Blind Issues)
* Halbert (QRP)
* Hall (including DSP WWW Page)
* Keys (Junk Box Projects, National Electrical Code for Hams)
* Kohnen (Tubes)

* Lau (Transverters, VHF/UHF, Filters, Repeatable Projects)
* Myers (Transmission Lines, Analog and Digital Design)
* Ornitz (Chemical and Toxic Material Use and Handling)
* Rymell (Electronics and Computers, Low-Cost Projects)
* Salyzyn
* Sayer (Class-C Bipolar Amplifiers and Phased-Lock-Loop Circuits)
* Sefranek (Amplifiers, Battery/Solar Operation, Power Supplies, and Repeaters)
* Silva (Analog, Digital, Tubes, Semiconductors, RF, Finding Parts)
* Stine (Tube Amplifiers, Receivers, and Exciters)
* Stockton (including QRP)
* Taylor (Tubes and Amplifiers)
* van Vliet (including Power Amplifiers, Low-Noise Amplifiers, and Mixers for Microwave)
* Woods (Mail-Order Electronics)

IBM PERSONAL COMPUTER (PC) AND CLONES

* Angus
* Bellville
* Bono (AutoExam, et al)
* Cole
* Ehrlich
* Fay
* Hieber (DOS and OS/2)
* Keller
* Perens (Linux for Hams CDROM)

INTERNET SERVICES

* Bellville
* Ehrlich
* Schleck
* Taylor

LASERS

* Noll (Communications)

MAIL/FILE TRANSFER PROTOCOL (FTP)/WORLD-WIDE WEB (WWW)/MULTIPLE-USER DUNGEON (MUD) SERVERS/ARCHIVES

* Ardai (Boston ARC WWW Page)
* Bellville (Scanner, Ham, and CB Radio WWW Pages)
* Bertolino (425 DX News and IOTA WWW Page)
* Bloom, et al (ARRL Info Mail Server)
* Bowen (rec.radio.amateur.* Supplemental Archives)
* Chandler (BayMOO Packet Radio Simulation MUD)
* deVolpi (Amsoft and World of Ham Radio WWW Page)
* Ehrlich (Boston ARC FTP Archive)
* Goldstein (Packet Radio and TAPR WWW Server)
* Hall (DSP WWW Page)
* Harding (Ham Server and WWW Page)

* Huntting (KaWin FTP Archive and WWW Page)
* Keezer (HamView WWW Page)
* Kile (North American Amateur Radio Equipment Dealers WWW Page)
* Killebrew (University of Houston ARC and Internet Relay Chat
#HamRadio Channel WWW Pages)
* Kumagai (Japanese DX Mailserver and Mailing List)
* Langner (SSTV WWW Page)
* Leadmon (WB3FFV FTP Archive and WWW Page)
* Leynes (Youthnet News WWW Page)
* Lloyd (QRZ! Ham Radio CDROM FTP Archive and WWW Page)
* Merritt (GRAPES WWW Page)
* Nerenberg (Contesting, DX, and Technical Amateur Radio WWW Page)
* Newkirk (ARRL HQ WWW Page)
* Nielsen (TAPR)
* Perens (Linux for Hams CDROM, WWW Page and Mail Server)
* Seney (Digital Storage Scope FAQ and Macnet WWW Pages)
* Simpson (Best of 75 Net and Security/Fire Systems WWW Home Pages)
* Walsh (QCWA WWW Page)
* Williams (Amateur Radio WWW Server)
* Williamson, P (AMSAT WWW Page and Anonymous FTP Archives)
* Woods (Mail-Order Electronics FTP Archive and WWW page)

MAILING LISTS

* Ackermann (TAPR Net-SIG) BBS)
* Adams (QRP-L)
* Ardai (Many, see full entry)
* deVolpi (AmSoft and World of Ham Radio Product Announcements)
* Dodell (Land-Mobile Radio, MARS Members)
* French, et al (Ham-Univ College and University Clubs)
* Hill (Antique and Older Tube Equipment, rec.radio.amateur.*
Working Group)
* Leadmon (MD/DC Activities)
* Madsen, et al (Iowa State Elmers)
* Meredith (F6FBB Packet BBS)
* Nerenberg (DX)
* Wier (Motorola HC11/HC16 and ICOM)
* Williamson, P (Many, AMSAT-related)

MEDIA (PUBLICATION/WRITING/BROADCASTING)

* Bertolino (SWL Page of Radio Rivista, Italy)
* Bloom (QEX)
* Buelow (TAPR BBSSIG User Education Working Group)
* Cebik (Technical Writing, FAQ's)
* Coletti, et al (Newsline)
* DeWolf (Media Relations for Clubs, Syndicated Columnist on
Internet Matters)
* Lau (QST/QEX)
* Leynes (Editor-in-Chief, Youthnet News)
* Lloyd (QRZ! Ham Radio CDROM)

* Moore (Co-Host, Ham Radio and More)
* Moseson (CQ Magazine Online Coordinator)
* Perens (Linux for Hams CDROM)
* Ruh (ATV Quarterly)
* Schleck (FAQ's and auto-faq)
* Seney (Macnet)

MEDIUM FREQUENCY (MF, 160 meters)

* Zurn

MICROWAVE

* Hammill
* Lau (Transverters up to 24 Ghz)
* van Vliet (including Power Amplifiers, Low-Noise Amplifiers, and Mixers)
* Veres (Commercial Radio through 12 GHz, 2.5 GHz ITFS TV)

MILITARY AFFILIATE RADIO SYSTEM (MARS)

* Alexander (Navy)
* Cartier (Army, CT Director for Emergency Operations)
* Dodell (Air Force, Mailing List)
* Gutstadt (Navy/Marine Corps.)
* Ingerson (Navy/Marine Corps., ME Area of Region ONE)
* Taylor (Air Force)

MOBILE/PORTABLE/FIELD DAY

* Carruth (FM and HT's)
* Cieslak (Field Day, Category 2A)
* Estes (Bicycle HF)
* Hare (RFI issues)
* Hieber
* Hill (including MF, HF)
* Humphries
* Keller (HF)
* Salyzyn (HF CW)

NATIONAL TRAFFIC SYSTEM (NTS)

* Elmore
* Goldstein (NCS FL Net, Packet)
* Salyzyn (Canada)
* Zurn (Europe)

NORTH AMERICAN CENTER FOR EMERGENCY COMMUNICATIONS (NACEC)

3277. Re: Austin Amateur Radio Suppy/ HRO in Delaware

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-05 00:00:00 UTC
From: Stephan Rashkin <stever@raven.cybercom.com>
Message-ID: <4a06od$kg6@crow.cybercomm.net>
Source record: 234488
Cross-posted to: alt.radio.amateur.club.clarc,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

One of the nicest guys I've come across is Bob, WN3K from HRO
in Delaware...That guy can handle a line of 10 people plus
still be pleasant and helpful on the phone at the same time.

As long as Bob is at HRO, that's where I'll buy my goodies...
He was extremely helpful many times, even when it took three
hours for me to decide on an HT..

Steve, WA2NHZ

Actually, you have to be in damn good shape to operate a contest for a full weekend. Fatigue is a major factor; the higher one's level of fitness the longer they endure at peak performance. Good contesters usually train/warm-up before big contests.

Yes, there is a parallel to sport. But everything is subject to argument. I consider wrestling a business, not a sport.

Hello to all who read this message.

I am letting you all know that the Burnaby Radio communications WWW page
is
now running stable, you should be able to check it out at any time.

Some of you had problems before accessing our WWW page, but that problem
should be over now. We have changed servers so our WWW Page should work
all
the time now.

The page is at "http://www.burnabyradio.com/ham/brc.html"

We are: Burnaby Radio Communications Ltd.
4257 E. Hastings Street
Burnaby, B.C. Canada
V5C 2J5
Phone: (604)298-5444
Fax: (604)298-5455
BBS: (604)298-3283

WWW: http://www.burnabyradio.com/ham/brc.html

Please visit us!!!

And please fill out our form, and you will receive our latest price
list.

Thanks.

From: peter@lsis.st.3com.com
Message-ID: <DJ5xus.A2o@pau.synnet.com>
Source record: 234242

Those people you hear on the ham bands using fowl language
are not "hams", they are merely "turkeys".

:-)

Peter, who reminds you that there's always PL, the frequency knob
and the power switch.

This strikes me as setting up difficult barriers to keep people out of
the hobby, as if the level of your license indicates your overall worth.

The entry level exams should be accessible, even if this means some
people memorize things. More people in the hobby makes a stronger
economic and political base. Another intent is to encourage people to
learn, and a lot of us would like to do that by tinkering - it's a
strong motivator.

As for DSP, etc. the question is open as to what is "essential". I can't
derive the equations used to calculate positions using GPS signals, but
what does that matter if I'm trying to figure out where in Baja I am? I
understand Boolean logic but I can't create an ASIC in silicon - does
that mean I should not use the parts?

I've only been licensed a few months, but I've already learned more
about antennas, propagation, and procedures than I memorized for the
tests. I got the license for fun, to give me an outlet to tinker, learn
from building kits and widgets in articles and then use them. I may
never go beyond Technician, because I don't want to learn code, but if I
need to learn it to do something I want to do, I will. And I imaging
there are a lot of others who have a similar outlook.

Bob

You need a Universal Asynchronous Receiver Transmitter (UART). One
entirely satisfactory device I've used is a Giant AY-1013. This is
an old device and I don't know if they are still being manufactured.
If you can get one, it is easy to use in that it requires minimal
support (a clock and maybe a level converter for the serial line).

I am currently using WinPix Pro. It is an excellent program but
is not available as shareware. The Beta version is currently
89.95 but the price is supposed to double very soon when the
final version comes out.(Beta testers get upgrade free). As
fare as I can tell this program is head and shoulders above
anything else. Contact Don K0HEO for details. email

3290. Alinco DJ-G5T dual-band handheld (and the DJ-580T and DJ-582T)

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-06 00:00:00 UTC
From: crum@xmission.xmission.com
Message-ID: <4a4p78$42g@xmission.xmission.com>
Source record: 234296
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Does anyone have comments on the Alinco DJ-G5T dual-band (2m/70cm) handheld? From reading a description, it looks great to me. Earlier, I didn't realize that it has a backlit keypad and a microphone down low (good for full duplex).

So, if you have comments, like perhaps in these areas, please reply or post!

- Are batteries (for the DJ-G5T) available from any companies besides Alinco?

- How does battery charging work -- do you charge the pack when it is disconnected from the radio, as with the DJ-580T?

- How about any neat undocumented features? The DJ-580T has a really neat undocumented feature -- its DTMF sending speed can be adjusted to be VERY (and I mean VERY) fast, by using the #123 code successively for each slower speed, to cycle between the 16 speeds) after F-PL/FL (as with the documented #508 code for entering cross band repeat mode). I wonder if the DJ-G5T's DTMF sending speed can similarly be adjusted. I wonder if the DJ-582T even has this really cool feature like the 580 does.

- The extra PTT button for the "other" band sounds neat.

- I have seen differing memory capacity numbers. One description said "80 memories", while another said "100 memories for each side" (for a total of 200, I guess). Which was correct? I guess I should ask Alinco, too.

- Do people like it, and has anyone had problems with it?

The biggest problem with my DJ-580T is that it is now all alone somewhere in the bushes up in the Wasatch Mountains. :-(

Let's get some DJ-G5T discussion going!

Oh, and I don't suppose it has a 9600bps data jack, does it? I don't know of any handheld that does, darn it.

Best Regards!

Finally the day has come : the new Website of Radio Vlaanderen
Internationaal, BRTN's world service, is on line since December 1.
The old Website was refurnished and contains a wealth of information
on RVI, its 50th anniversary, programmes, reception, International
Listeners' Club and much more.
RVI also puts you on the way to a series of interesting Websites.
Information on our Website is available in six languages : Dutch,
French, German, English, Spanish and Arabic.

Shortly you will be able to read the RVI news on our Website, or
listen to it via Real Audio.

It is worth your while to call on
http://www.brtn.be/rvi/

OK, Ill stick my 2 cents in and get blasted.
The International community decided that there would be a no-code VHF license. GET OVER IT!
If the international community decides that they are going to get rid of code altogether....wonderful, makes it easier for me. If not, Ill have to learn code to upgrade. I have no problems with that. Seems like a case of jealousy on the part of those who had to learn code just to get started. You people sound like Rush Limbaugh. GET A LIFE!

Hi Mike,

: The real "shame" is the fact that most white hams believe that
: amateur radio *isn't* a racist hobby.

: I stand by my original assertion. Ham Radio is an institutionally
: racist hobby.

Then I suppose the black VE at my own exam session doesn't count? I suppose I should also forget the other black hams I've worked with and for over the years? I don't think so, Mike.

Racism, sexism and all the other isms to which flesh is heir are entirely matters of human behaviour. Amateur radio is only a hobby, and a regulated, technically oriented entity with absolutely no racial content, orientation or agenda. Amateur radio would exist even without all those aging white guys you seem so bothered about: _they_ don't matter, either, and I've seen no evidence that any significant percentage of that dominant *American* class of hams has _any_ racial bias to speak of.

Sure, I expect I could pick out a dozen racist hams on any given night, especially on 75M, especially from 4 and 5 land. This reflects the racial history of the American south-east, NOT ham radio. See the difference? I knew you could.

Insular, prejudiced, ill-educated, aging, drunken white guys from The South (or The North or wherever, there's one in every crowd): with radios or without, they've always been more trouble than they're worth, and many of them are genetically endowed with mouths much larger than their brains. But they are, if anything, only the hind end of ham radio, and not the head, and they have no future. Most of us have better sense. We are everywhere, and there are more of us than you think. };-]

Cheers es 73
RF "aging white guy" Buchanan

That's purely a practical concession. I doubt anybody wants to keep track of if and when new testees were formerly licensed. As I said, the hassle factor of losing your ticket, re-testing, getting a new call, and perhaps then paying to get back your old call should make such re-testers a very small minority (oops, that's another thread). The clear path for most new hams should be one of entering the service via the entry-level ticket, learning the material by doing (over 2-5 years, not one), and upgrading. Without the code barrier/excuse, it's very hard to justify *not* learning more theory and practice than is contained in the entry-level tests.

Actually if most hams didn't follow good amateur practice, most bands couldn't be used by anyone. The idiots, fools and disruptors exist precisely because they don't follow those rules. Even on 80 meters and 20 meters, most frequencies don't feature people keying up on one another, and competing for a frequency. I also hear many hams asking if a frequency is in use before keying up. There are too many foolish, idiotic and disruptive hams, but they aren't the rule, or there would be no ham radio.

From: k1oik@ccsnet.com
Message-ID: <8070-302597201@ccsnet.com>
Source record: 234314

K1OIK is not the author of what follows.
I am sending it around some more because I found it interesting:

I spent several weeks last summer researching and verifying a rather thorough and accurate list of celebrity hams which I subsequently published in the 1994 CQ Amateur Radio Almanac.

You'll find the list on page 426.

Here's a copy...

This list includes widely-known personalities who are (or were) public figures, and who would be recognized by an average person. Many prominent businessmen, local radio/TV personalities, and mid-ranking government officials are also licensed amateurs, but they are not listed here, in the interest of protecting their privacy.

Several lists have propagated through the amateur community from time to time often with errors. For example, some lists claim N6KGB was actor Jimmy Stewart, when the call was really held by another well-known actor: Stewart Granger (whose real name was James Stewart, and who became a Silent Key in 1993). Many lists claim that Russian cosmonaut Yuri Gagarin was a ham (some lists even claim his call was UA1LO); there is no hard evidence that he was ever licensed. Another rumor insists that musician Jon Bon Jovi is a ham. He is not licensed but his cousin, record producer Tony Bongiovi, is KX2Z. Other lists indicate that musician Jose Feliciano is a ham; WP4CO's name is definitely Jose Feliciano, but he's not the famous musician. Donny Osmond was once licensed as KA7EVD, but his license has expired - another Donald Osmond holds the call WD4SKT, but it's not the same person. KD6OY insists that his name is really Garry Shankling, not Shandling, even though he lives in Los Angeles. And WA7WYV's name is indeed Andy Griffith, but he's never played either Andy of Mayberry or Matlock on television.

Royalty

Juan Carlos I de Borbon y Borbon, EA0JC, (1938-), King, Spain
Bhumiphol Adulayadej, HS1A, (1927-), King, Thailand
Hussein I, JY1, (1935-), King, Hashemite Kingdom of Jordan

Political and Religious Leaders

Francesco Cossiga, I0FCG, (1929-), President, Italy
Barry Goldwater, K7UGA, (1909-), former U. S. Senator (R-Az)
Carlos Saul Menem, LU1SM, (1930-), President, Argentina
Rajiv Gandhi, VU2RG, (1944-1991), former Prime Minister, Republic of India
General Curtis LeMay, W6EZV, (1906-1991), Vice-Presidential Candidate (with George Wallace), 1968

General Anastasio Somoza Debayle, YN1AS, (1925-1980), former President, Republic of Nicaragua
Roger Cardinal Mahony, W6QYI, (1936-), Cardinal of the Roman Catholic Archdiocese of Los Angeles

Entertainers/Musicians

Marlon Brando, FO5GJ, (1924-), Actor
Arthur Godfrey, K4LIB, (1903-1983), Entertainer
Burl Ives, KA6HVK, (1909-1991), Singer
<Press ENTER to continue, or /EXIT to quit>
Donny Osmond, ex-KA7EVD (expired), (1957-), Entertainer
Patty Loveless (born Patricia Ramey), KD4WUJ, (1957-), Musician
Stu Gilliam, KI6M, (1933-), Comedian
Larry Junstrom, KN4UB, (1957-), Rock Musician (".38 Special")
Stewart Granger (born James Stewart), N6KGB, (1918-1993), Actor
Priscilla Presley, N6YOS, (1945-), Actress
Alvino Rey, W6UK, (1908-), Musician/Bandleader
Chet Atkins, WA4CZD (1924-), Musician
Ronnie Milsap, WB4KCG, (1943-), Musician
Joe Walsh, WB6ACU, (1947-), Rock Musician ("Eagles", "James Gang")
Andy Devine, WB6RER, (1905-1977), Actor

Writers/Authors

Jean Shepherd, K2ORS, (1921-), Writer/Humorist
Roy Neal, K6DUE, (1921-), Network Science Reporter - NBC (retired)
Walter Cronkite, KB2GSD, (1916-), Network News Anchorman - CBS (retired)
David French, N4KET, (1938-), former Network News Anchorman - CNN
David Ruben, M.D., TI2DR, (1933-), Author ("Everything You Always Wanted to Know About Sex - But Were Afraid to Ask")
<Press ENTER to continue, or /EXIT to quit>
Dr. Alexander Comfort, KA6UXR, (1920-), Author ("The Joy of Sex")

Others

Joe Rudi, NK7U (1946-), Major League Baseball Player (retired)
Dick Rutan, KB6LQS, (1938-), pilot of Voyager airplane non-stop around the world
Jeana Yeager, KB6LQR, (1952-), co-pilot of Voyager airplane non-stop around the world

Numerous astronauts and cosmonauts also hold amateur licenses. A list appears

in the "Amateur Radio in Space" section.

```
/ ++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++\
| <<<<<<<Frequently Asked Questions for Amateur Packet Radio>>>>>>>>> |
\ ++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++/
```

1.1 What is packet radio?

Packet radio is digital communications via amateur radio. Packet radio takes any digital data stream and sends that via radio to another amateur radio station. Packet radio is so named because it sends the data in small bursts, or packets.

1.2 What is amateur radio?

Amateur Radio (sometimes called Ham Radio) is individuals using specified radio frequencies for personal enjoyment, experimentation, and the continuation of the radio art. Amateur radio operators must be licensed by their government. In the United States, the Federal Communications Commission issues amateur radio licenses. Normally, a test on operating practices, radio theory, and in some cases morse code proficiency test is administered. Amateur radio is not to be used for commercial purposes. Also, amateur radio operators are restricted from using profanity and using amateur radio for illegal purposes.

For more information on Amateur Radio in general, see the monthly frequently asked questions posting in rec.radio.amateur.misc. A copy of that FAQ is also available from ftp.cs.buffalo.edu.

1.3 What can I do on packet radio?

Keyboard-to-Keyboard contacts:

Like other digital communications modes, packet radio can be used to talk to other amateurs. For those who cannot use HF frequencies, two amateurs can talk to each other from long distances using the packet radio network.

Packet BBS operations:

Many cities have one or more packet Bulletin Board System (BBS) available on the local packet network. Amateurs can check into the BBSes and read messages from other packet users on almost any topic. BBSes are networked together over the packet network to allow messages to reach a broader audience than just your local BBS users. Private messages may also be sent to other packet operators, either locally or who use other BBSes. BBSes have the latest ARRL, AMSAT, and propagation bulletins. Many BBSes have a file section containing various text files full of information on amateur radio in general.

DX Packet Cluster:

A recent development is use of packet radio for DX spotting. HF operators connect to the local DX Packet Cluster for the latest reports on DX. Often a user will 'spot' some hot DX and distribute the DX report real time.

File Transfer:

With special software, amateurs can pass any binary files to other amateurs. Currently, this is done with TCP/IP communications, YAPP, and other specialized protocols.

Satellite Communications:

Many of the amateur radio satellites contain microcomputer systems that can provide special information to amateurs. Some satellites contain CCD cameras on board and you can download images of the earth and the stars. Others provide store and forward packet mailboxes to allow rapid message transfers over long distances. Some satellites use AX.25, some use special packet protocols developed for satellite communications. A few transmit AX.25 packets over FM transmitters, but most use SSB transmissions.

1.4 Why packet over other digital modes?

Packet has three great advantages over other digital modes: transparency, error correction, and automatic control.

The operation of a packet station is transparent to the end user; connect to the other station, type in your message, and it is sent automatically. The Terminal Node Controller (TNC) automatically divides the message into packets, keys the transmitter and sends the packets. While receiving packets, the TNC automatically decodes, checks for errors, and displays the received messages. In addition, any packet TNC can be used as a packet relay station, sometimes called a digipeater. This allows for greater range by stringing several packet stations together.

Packet radio provides error free communications because of built in error detection schemes. If a packet is received, it is checked for errors and will be displayed only if it is correct.

With VHF/UHF packet, many countries allow packet operators to operate in automatic control mode. This means that you can leave your packet station on constantly. Other users can connect to you at any time they wish to see if you are home. Some TNC's even have Personal BBSes (sometimes called mailboxes) so other amateurs can leave you messages if you are not at home.

Another advantage of packet over other modes is the ability for many users to be able to use the same frequency channel simultaneously.

1.5 What elements make up a packet station?

TNC (Terminal Node Controller): A TNC contains a modem, a CPU, and the associated circuitry required to convert between RS-232 and the packet radio protocol in use. It assembles a packet from some of the data on the serial line, computing an error check (CRC) for the packet, modulates it into audio frequencies, and puts out appropriate signals to transmit that packet over the connected radio. It also reverses the process, translating the audio that the connected radio receives into a byte stream on the RS-232 port.

Most TNC's currently use 1200 BPS (bits per second) for local VHF and UHF packet, and 300 BPS for longer distance, lower bandwidth HF communication. Higher speeds are available for use in the VHF, UHF, and especially microwave region, but they often require unusual hardware and drivers.

Computer or Terminal: This is the user interface. A computer running a terminal emulator program, a packet-specific program, or just a dumb terminal can be used. For computers, almost any phone modem communications program can be adapted for packet use, but there are also customized packet radio programs available.

A radio: For 1200 BPS UHF/VHF packet, commonly available narrow band FM voice radios are used. For HF packet, 300 BPS data is used over single side band modulation. For high speed packet (anything greater than 1200 BPS), special radios or modified FM radios must be used.

1.6 What do you mean we can all use the same channel?

Packet radio uses a protocol called AX.25. AX.25 specifies channel access (ability to transmit on the channel) to be handled by CSMA (Carrier Sense Multiple Access). If you need to transmit, your TNC monitors the channel to see if someone else is transmitting. If no one else is transmitting, then the TNC keys up the radio, and sends its packet. All the other stations hear the packet and do not transmit until you are done. Unfortunately, 2 stations could accidentally transmit at the same time. This is called a collision. If a collision occurs, neither TNC will receive a reply back from the last packet it sent. Each TNC will wait a random amount of time and then retransmit the packet.

In actuality, a more complex scheme is used to determine when the TNC transmits. See the "AX.25 Protocol Specification" for more information.

1.7 What is AX.25?

AX.25 (Amateur X.25) is the communications protocol used for packet radio. A protocol is a standard for how two computer systems are to communicate with each other, somewhat analogous to using business format when writing a business letter. AX.25 was developed in the 1970's and based of the wired network protocol X.25. Because of the difference in the transport medium (radios vs wires) and because of different addressing schemes, X.25 was modified to suit amateur radio's needs. AX.25 includes a digipeater field to allow other stations to

automatically repeat packets to extend the range of transmitters. One advantage of AX.25 is that every packet sent contains the sender's and recipient's amateur radio callsign, thus providing station identification with every transmission.

1.8 Definitions: Commonly used terms in Amateur Packet Radio

44 net - The class A network designator for TCP/IP amateur packet radio. All numerical TCP/IP addresses are in the format 44.xxx.xxx.xxx.

AFSK - Audio Frequency Shift Keying. A method of representing digital information by using different audio frequencies modulated on a carrier.

AMPR - Amateur Packet Radio.

ampr.org - The high level domain recognized on Internet for amateur packet radio TCP/IP.

AX.25 - Amateur X.25 protocol. The basis of most packet systems. See section 1.7 for more information.

CRC - Cyclic Redundancy Check. The error detection scheme included in each packet. Verify that the packet was received error free.

CSMA - Carrier Sense Multiple Access. A system allowing many stations to use the same radio frequency simultaneously for packet communications.

>
>I stand by my original assertion. Ham Radio is an institutionally
>racist hobby.

Normally I agree with your affirmative action views of amateur radio,
but I have to disagree with this particular viewpoint.

While you might be able to make a case that the distribution of race
in the amateur radio population does not match that of the US population
as a whole, there are a myriad of factors that can cause such skewing.
Merely the presense of an abnormal distribution does not prove a cause
and effect relationship. While the effect may be that amateur radio
is inherently not a minority hobby, that does not mean that amateur
radio is a racist hobby.

This isn't to say, of course, that amateur radio isn't a prejudiced
hobby. I freely admit that I generally avoid talking to CB recipients
of affirmative-action ham radio licenses. In that respect, you could
say that yes, I am prejudiced, but as those same recipients fall into
numerous race categories, you would be hard pressed to classify me
as a racist.

Furthermore, I would assert that amateur radio inherently is *not*
a racist hobby, since you have no basis to judge the color of a
person's skin based upon his or her callsign. When I'm on HF, I
cannot tell if N0XXX is white, black, or purple.

Thus, I believe your original assertion is, in fact, incorrect.

What..you must be kidding! This isnt a factory feature! Some bozo-CB-pseudo
Tech has been fiddling in your rig! When you key up, the audio from the low
level mic preamp circuit is being fed into the receive audio amp. Cut this
connection and your problem is solved - say, come to think of it..I didnt
see any call letters in your posting...are you a CBer running this radio ??

Tisk, tisk! Shame on you if you're violating Part 95! A federal law no less!

(Come to think of it..would a real ham need to ask such a silly question? ;-))

3316. Milwaukee CBer taken to court

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-06 00:00:00 UTC
From: fedpress@omnifest.uwm.edu
Message-ID: <4a5img$lb@omnifest.uwm.edu>
Source record: 234322

All three local TV newscasts tonight in Milwaukee, Wisconsin carried a news conference called by a Milwaukee alderman in front of the home of a local CBer whose foul-mouthed transmissions were being picked up by large numbers of his neighbors on their TVs and phones. The neighbors have pressured the alderman to take action in circuit court to have the CBer shut down as a public nuisance!

The Milwaukee Journal-Sentinel also carried an article on the same story this morning. I'm told that it (in contrast to the TV stations) erroneously identified the CBer as a ham. I understand that the pres. of the Milwaukee Radio Amateurs' Club has a fax into the newspaper tonight requesting a correction.

I agreeed with most of what you said except for what you wrote above.
Why should someone have to know how an oscillator works in order to use a
ham radio? That is like saying you can't get your drivers license until
you can explain the inner workings of a combustion engine. Most people
are responsible drivers without having to know such knowledge. So in
the same vein there would be many responsible hams who don't know
how an oscillator works.

Hi everyone, the manager of the Radio Shack service center in this area (Salt Lake County, Utah) just told me that she will not do anything to fix my new radio which always receives a noise signal on 146.76MHz -- that is, is has a "birdie" there. Does anyone else have experiences dealing with Radio Shack to try and fix such a problem?

Lots of good ideas so far. Assuming that we stay with the existing six license classes, I would definitely vote for making the Novice license limited-term [one year; two at most] limited-power and limited-bandwise. That was a powerful incentive to upgrade at the time I got my Novice ticket back in 1966.

I disagree, though, with the idea of the Tech being limited in term. Back when the Novice was limited to one year, many took the route to Tech just to be able to stay one the air and keep their current callsign [minus the "N" of course]. Back then, there was very little going on above 30 mHz. Today, in contrast, there are good reasons for staying at the Tech level. One club I belong to is strictly 1 gHz and up, and these guys are way ahead of me, even with eight years background with radar and microwave in the Air Force.

My only comment on the theory exams is that they need to be brought more in line with actual amateur practice today. Perhaps we do not need all of the questions on electronic circuits any longer, since most hams do not design their own equipment or build kits these days. How many of us could troubleshoot or repair the likes of an FT-1000 or IC-775DSP?

3326. Re: HF TOO CROWDED?

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-06 00:00:00 UTC
From: Rick Tressler <RT0@GANET.NET>
Message-ID: <4a4d69$9fs@s2.GANet.NET>
Source record: 234332

I got my license in 1972 as a Novice. Got the General 2 years later and after two more years left
HF for reasons not of my own doing. Now I'm back on HF and having generally, a good time with CW
and SSB. However, I must agree with comments regarding good ham practice. People all over, not
just in ham radio are less considerate than 20 years ago. Things have changed, as they are want
to do. No matter where you go, you'll find things aren;t as they used to be. If hams keep up
some of the derelict operations, out of bands operations, and generally making the bands a poor
place for amatueur radio, we can count on losing some spectrum. If it continues, we can expect to
lose more. We hams need to "get back to some basics", as it were and start doing what's right to
preserve the hobby. I now reluinquish my soap box.

Nope Mike. People are racist, but hobbies are just hobbies.

The hobby isn't racist. The hobbiests may be.

>I stand by my original assertion. Ham Radio is an institutionally
>racist hobby.

It's funny, it doesn't get any truer no matter how many times you assert it.
How is the Amateur Radio Service racist? Does the FCC prohibit licenses to
people of certain races?

What ham-radio institutions are racist? ARRL? Contesting?

It is clear, Mike, that you have no idea about what you're talking. There
are racist ham-radio operators, but the hobby is no more intrinsically
racist than knitting or playing musical instrument.

From: j-weiss@nwu.edu
Message-ID: <4a380t$9e6@news.acns.nwu.edu>
Source record: 234337

I'm interested in hearing comments (good or bad) about currently available repeater controllers. I am considering products from Link (RLC2/3) and C3I (Cat1000) to replace some controllers purchased in the mid 80's

Our repeater site can use a controller that could handle several repeaters or links at once, with autopatch and options to cross-link the repeaters for nets etc.

If you have information on these or other repeater controllers with mid to high level features and performance please reply or drop me a note.

Anyone have a suggestion where I can find PC contesting software on the net?
I've been looking in the BARC FTP site, but this is like looking for a needle in a haystack - file descriptions poor.
Looking for something that might be useful in several different contests (10 meter, SS, DX, etc.)

Thanks, Jim.

Dr. Reed--

I am always amused by those of you who post their resume as some sort of monument to their ability or worth as a human being.

<<BTW- I am a periodontist (I do gum surgery). Six years of college, <<four more in dental school & two more specializing. I lecture <<nationally on dental pharmacology (drugs). I write a monthly <<columnfor my state dental association. I have many publications <<in national, peer reviewed journals. I serve on committees for <<both the state dental association & board of dentistry. I have <<been invited to speak at the national meeting next year for the <<American Academy of Periodontology. I am a private pilot & fly my <<own experimental aircraft. Ham radio is a hobby.

Jeez, I'm breathless!!

CW literacy has been a defining element for the amateur community for decades. The advent of a no-code license class was a major change. Many of us viewed the No-Code criteria as a dumbing down of the hobby. Reducing standards and thereby fundamentally altering the very character of amateur radio.

>I don't understand this enthusiasm for a time-limited entry license.
>First of all, do you really mean once only in a lifetime?

I don't recall anybody in this thread advocating that. After your entry-level license expired you could always re-test, get another call, then pony up your money to get back your old call. That's enough hassle to encourage most people to upgrade. Remember, we're talking about a no-code upgrade. It's not that big a deal.
>
>Further, what harm is there in someone staying at the entry level
>indefinitely?

The harm is in suggesting through our testing standards that somebody who has never been faced with the simplest circuit diagram, who has never even heard of reactance or decibels or rectification (to pick a few at random), can fulfill the technical mandate of Part 97.1.

73,
Mike, KK6GM

WIA positions on EMC

WIA positions on EMC and Standards combined

With the responsibility for industry compliance with electro-
magnetic compatibility (EMC) standards for electronics and
communications equipment passed to Standards Australia by the
Spectrum Management Agency (SMA), and the pending EMC compliance
scheme commencing on 1 January 1996, the WIA Federal Council voted
at its October meeting to corrdinate the WIA Federal positions of
EMC Co-ordinator and Standards Co-ordinator.

Hans Ruckert VK2AOU recently resigned his position as EMC Co-
ordinator, which he had held for some years, and the position had
remained unfilled since then.

At the quarterly WIA Federal Convention held over the weekend of
28-29 October, the Federal Council appointed current Standards Co-
ordinator, Roger Harrison VK2ZRH, to the combined co-ordinator
position, recognising his technical background and experience,
grasp of the issues and efforts at keeping abreast of develop-
ments.

Standards Australia has responsibility for EMC compliance of
equipment under a memorandum of understanding (MoU) signed between
the SMA and the standards organisation (see WIA News, Oct. 1994,
p.39). From 1 January next year, equipment meeting the requirements
must bear a "ce" logo. Sustralian comapnies expecting to export
equipment to Europe will be required to comply and show the logo,
also,

from the Federal Media Liaison Officer

Region 3 ARDF Contest

Region 3 Amateur Radio Direction Finding Games, 1996

Townsville in North Queensland is the venue for the Second Inter-
national Amateur Radio Union Direction Finding Contest, to be held
in July next year.

The WIA is the host amateur radio society for this international
event, with teams from China, Taiwan, Japan, New Zealand and other
countries in the Asia-Pacific region expected to attend.

ARDF - as it is known - unlike hiddeen transmitter hunts so
familiar to many Australian amateurs, is more of a sport,

combining orienteering and radio direction finding over a set outdoors course. It is one of the fastest-growing amateur radio activities around the world, and in particular the Asian-Pacific region.

In China, ARDF is used to introduce young people to the technologies of electronics and communications, and to the attractions of amateur radio.

Contest co-=ordinator, Wally Watkins VK4DO, advises that the 2nd IARU ARDF contest will run from 15 to 20 July, 1996. Accommodation for national and international competitors has been booked at the James Cook University, in Townsville. Invitations have been sent out to all Region 3 amateur radio societies and other regions, and to known interested individuals.

Transmitters used for the ARDF contest operate on 80m and 2m. Equipment for next year's contest is already under construction and the first unit has been completed.

Receiving equipment is simple to build and low in cost. Suitable designs have been proven by Ron Graham VK4BRG. Full details can be obtained from Ron (QTHR), including printed circuit boards and construction hints. No parts are really hard to get, advises Wally VK4DO.

Australian competitors are sought, to neter the ARDF Contest. There has been keen interest from Victoria and New South Wales for both the Senior and Old Timer sections, but competitors to enter the women's and junior classifications are wanted.

Further details can be obtained from the 2nd IARU ARDF Contest Secretariat, W.A. Watkins VK4DO, PO Box 432, Proserpine Qld 4800.

Some clarification

Some clarification

The US claim for a 2m distance record of 4333 km for a contact between Hawaii and Washington state last July, reported in WIA News, October (AR, p.18), has occasioned correspondence that there have been 2m contacts over greater distances.

VK4IK wrote that, more than 13 years ago as VK8HW, he contacted JR6LHX for a confirmed distance of 4969.7 km. Since then, according to Federal Technical Advisory Committee Chairman John Martin VK3KWA, that record has been broken on at least three recorded occasions, the most recent being a contact between VK4BFO and JI7DMB on 15 April 1991, for a confirmed distance of 6763 km, a world record.

These Australia-Japan contacts were all via Class II trans-equatorial propagation (TEP), an ionospheric mode. The ARRL record cited in October WIA News claimed the contact as an "over water"

record, apparently involving tropospheric propagation, a distinction made in the US but not made in Australia.

An August WIA News item warning about the use of FM below 29 MHz did not make the clear point that this meant wideband FM (16KOF and 16KOG modes). Narrowband FM (6K00F and 6K00G modes), has, of course, been permitted on the HF bands for many years and is permitted in the latest Technical Licence Specifications. It is wideband FM that is not permitted below 29 MHz.

Marconi week

Marconi Week 5th-12th of December 1995

The ACT Division of the Wireless Institute of Australia will commemmorate the 100th Anniversary of the invention of radio by Marconi by holding a series of special events on HF, VHF and UHF over seven days from the 5th to the 12th of December 1995. The WIA is participating on the invitation of the University of Canberra and in conjunction with the IREE.

The University of Canberra plans to hold the official opening to coincide with the commissioning of the now operational 10 metre and 4.5 metre telescopes. It is proposed to invite senior government official from the Italian Embassy and Government Ministers to the opening which is planned for the 5th of December. No details of this event are available at this stage but it is anticipated that invitations will be sent out soon. It is anticipated that the Vice Chancellor of the University and other dignitaries including the head of the Department of Engineering Professor Edwards will conduct the opening ceremony.

The WIA has requested that the Italian Ambassador or other designated senior diplomat should deliver a suitable message to radio amateurs in both English and Italian. It is planned to record this message and use the recording on subsequent days during the contest. At this stage it is not clear who will deliver this message but we can anticipate support from the highest level within the Italian Embassy.

The aim of the commemmoration is simply to recognise the work done by Marconi and apart from the activities on the final day the program will be kept very simple. It is proposed that each night during the week a prerecorded message by the WIA ACT Division should be broadcast on one of the HF bands to be followed by a designated time by the replay of the opening address. Listener, whether qualified amateurs or not will be encouraged to listen and to report via QSL cards if they can hear the opening broadcast. Any QSL cards received will be acknowledged by a special certficate specifically designed to commemmorate the event. Short wave listeners will be encouraged to participate. Following the broadcast the duty broadcaster will listen for call backs and

acknowledge anyone calling in after the broadcast. These listeners will also be asked to QSL but they will receive an endorsement to their certificates acknowledging the fact that they made contact with the broadcast station. Contacts by CW are especially encouraged. The ACT Division has requested from the SMA the use of the special call sign VI100GM for this event.

It is proposed to broadcast the openeing ceremony text on the following frequencies:

1. HF 80 metre Band (Novice Section) 5th December 2000 hr local time and again at 0700 hr local time on the morning of 6th December. (Conditions permitting).

2. HF 40 metre Band (Open Section) 6th december 2000 hr local time depending on the ionospheric conditions. Repeated at 0700 hr on the 7th.

3. HF 20 metre Band (Open Section) 7th December 2000 hr local time. repeated at 0700 hr local time. Repeated at 0700 hr on the 8th.

4. HF 10 and 15 metre band 8th December, time dependent on ionospheric conditions. Repeated at 0700 hr on the 9th.

5. HF VARC Bands 9th December again the timing being dependent on conditions. Repeated at any time suitable.

6. VHF contacts on 6 metres and 2 metres via repeater or single side band on the 10th of December. Timing dependent on conditions.

7.UHF contacts on any band or above 70 cm on the 11th of december. Timing dependent on conditions.

8. On the 12th of December an attempt will be made to bounce a signal off the moon using the 10 metre dish at the University of Canberra. The objectives are:

1. To receive an echo back from the moon of our own signal.

2. To have the bounced signal confirmed by QSL from any part of the world.

3. To establish CW contact with another station anywhere in the world.

4. To establish voice contact with another station anywhere in the world.

All contacts will be acknowledged by the issuing of appropriately tailored certificates.

Further information will be provided as the deatils are finalised. We need volunteers of suitably qualified amateurs to conduct the HF, VHF and UHF part of the program. Anyone interested should

contact Rob VK1KRA on 2470387 or on 2 metres.

Rob Apathy

News briefs

NEWS BRIEFS

Technical difficulties are, for the fourth time, threatening to delay the commisioning of Sydney Airport's new control tower. Voice switching software, which controls all comunications to and from the control tower, has been performing below specification. In particular the "ghosting" feature, which allows the new tower to operate in parallel with the old one, is not yet operational.

The airport's new precision approach radar system, which allows takeoffs and landings even in poor weather conditions will be delayed beyond the end of the year, because the system has not yet been certified.

Operators at the airport hope that, when it has been commissioned, the new tower and radar will allow up to 80 takeoffs and landings per hour, up from a current level of sixty movements an hour now.

The sort of bodies one can find on the Internet these days draws a great deal of attention, but in the United States (where else) a woman has gone one better and placed her *entire body* on the Net. The woman, who died of a heart attack in 1993, donated her body to science; researchers at the University of Colorado froze her, and sliced her into 5,200 ultra-thin wafers, each one third of a millimetre thick.

Photographs of each slice were asembled with images taken by computer aided tomography (CAT scans), magneto-resonance imaging, and X-rays, and the whole lot stored on a computer.

It's now possible for anyone on Internet to access these images; in the future, the data will be manipulated to provide more realistic anatomical simulations for medical researchers.

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club news: Waverley

WAVERLEY AMATEUR RADIO SOCIETY

A reminder that the next meeting of the Waverley Amateur Radio Society will be held on Wednesday, 20th December. A topic for the evening has yet to be announced, but come along anyway for a ragchew. The venue is the society's premises in Vickery Avenue, Rose Bay (off New South Head Road), next door to the Rose Bay R.S.L. club where a number of members gather for pre-meeting refreshments. Starting time is 7:30 p.m., with doors opening at 7 p.m. Members and anyone interested in amateur radio are invited to come along.

The society is holding its Christmas dinner at the Rose Bay RSL Club on Saturday, December 16th. If you would like to attend, please advise Eddie, VK2BEH, on 327-4118 to assist catering arrangements.

Don't forget that the society holds it's weekly net at 7:30 p.m. every Tuesday using the Paddington 2 metre repeater on 147.025 MHz.
All are welcome to join in.

--Simon Buxton VK2EII, Waverley Publicity Officer

Club news: AAPRA

AUSTRALIAN AMATEUR PACKET RADIO ASSOCIATION

THE AAPRA COMMITTEE RECENTLY HAD THE PLEASURE OF ENTERTAINING JOHANNES KNEIP DG3RBU WHO TOGETHER WITH FLORI DL8MBT DEVELOPED THE BAYCOM SYSTEM OF SOFTWARE AND HARDWARE TO USE PACKET WITH A SIMPLE MODEM.

JOHANNES WHO FORTUNATELY SPEAKS ENGLISH WELL WAS ABLE TO TELL US ABOUT BAYCOM IN THE FUTURE AND SHOW US SOME NEW BAYCOM HARDWARE INCLUDING THE USCC 4 3SPEED MODEM BOARD AND A NEW 9600 BAUD MODEM TO RUN WITH BAYCOM.

HE SHOWED US A MAP OF THE PACKET NETWORK IN GERMANY AND IT WAS INTERESTING TO HEAR HOW 70,000 AMATEURS COPE WITH THE CONGESTED AND REDUCED SPECTRUM AVAILABLE IN THAT COUNTRY. THE SIMPLE ANSWER IS THAT THEY MAKE USE OF UHF AND SHF AND DON'T ALL TRY TO WORK ON 2 METRES.

--FROM GEOFF VK2BQ PUBLICITY OFFICER

Club news: SPARC

The next meeting of the SYDNEY PROGRESSIVE AMATEUR RADIO CLUB (SPARC) will be held jointly with the AUSTRALIAN MICROCOMPUTER USERS SOCIETY (AMUS).

This will be a special meeting and will involve the auction of the equipment from a deceased estate, and also members' goods. It is anticipated that the SES will have a number of computer systems to dispose of. The auction will be held at the club rooms at 2:30pm on Sunday 10 Decmber. This will replace the normal monthly meeting.

The club premises are located at Middlemiss Street, Milsons Point, in the first arch below the railway line immediately to the north of the intersection of Lavender Street and Milsons Point Road. These are also the SES headquarters for North Sydney.

This meeting will also mark the recent creation of a new limited company to merge the business interests of SPARC and AMUS, to be known as the AUSTRALASIAN COMMUNICATIONS AND COMPUTING ASSOCIATION (ACCA) LTD.

Refreshments will be available for a nominal charge, and all are very welcome.

--Peter Jensen VK2AQJ, Publicity Officer

Club news: St George

From the St George Amateur Radio Society

The last monthly meeting of the Society for 1995 will be held at the usual venue, that is in the 1st Allawah Scout hall, corner of

Bellevue Pde. and Blakesley Rd., South Hurstville at 7.30 pm on Wednesday evening the 6th of December 1995.

Guest speaker for the evening will be Rudy Breznik VK2AOT. Rudy will be exhibiting his manufactured range of Emtron linear amplifiers and switch mode power supplies that he has had considerable success in exporting to many overseas countries.

If prompted there is a high probability that Rudy, a long time businessman in our hobby will voice his stong opinion of the future direction of amateur radio in Australia.

Members are reminded that as usual there will be no meeting of the society in January of the new year 1996.

Visitors are always welcome to club meetings, coffee, tea and biscuits are provided and the members look forward to meeting those interested in attending.

from - Allan VK2XF Publicity Officer

Club news: AATC

The AATC will hold the next general meeting as usual on the 2nd Sunday of the month - December 10th at a changed location. The location for the December meeting will be at Bankstown Scout Activities Centre 68 Restwell St - use the back entrance off the large car park area. Note this is the last meeting for 1995 and the meeting strats at 1.00pm, any body with an interest in ATV - welcome; technical lecture to be finalised and announced next week. Bring the club floppy disc for updates or purchase new one.

AATC Inc. Publicity Officer Bob Barnes

I'm trying to find either an IC or a schematic for converting serial-parallel.

I own a solid state radioteletype decoder (circa 1980) designed to work with serial printers. However, my printer, like virtually all others is parallel.

Regards,

Brian Webb, KD6NRP

Brian,
Don't bother building one when you can buy one - about $90 from
Global Computer Supplies 800-845-6225.

Of course, a used serial printer at a hamfest would be cheaper than that.

> remain on the rolls.

You are making the assumption that the reason people don't upgrade
is that they haven't "taken the time and/or effort" to upgrade. While that
may be true for some, but certainly not everyone. Some are limited in
the amount of time they can spend. Others such as the 4th, 5th, and 6th
grade students I have in my local elementary school radio club just don't
have the prerequisite math and science backgrounds to easily pick up the
advanced class license material. Why should they be penalized by being
given only a "temporary" license? They probably have more to offer
the amateur radio service than most, so if anything we should be doing
what we can to get them and keep them interested in amateur radio.
Alternatively we can let the likes of Mike Whately or others that have
the "no lids, kids, or space cadets" attitude rule our membership.

73,
Todd

3345. Info needed on starting a Emerg./P.S. Comm. organinzation

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-07 00:00:00 UTC
From: delaney@j51.com
Message-ID: <4a7ta6$4n3@tzlink.j51.com>
Source record: 234141

Where could I find info on starting a emergancy/public service communications group/organazaion. Specifically I'm looking for info on where I could look in state/federal laws on anything related to this. At this point this would not be organazation per se, as we would not meet at a public place, and all that. It would more be a group of ham (and CBers, and scanner people) to assist allready established comm. systems in my area (1 county, 1/4 million people) in either aux. support or setup and coordinaton. I have found the ham/CB groups in my area too into politics and all that they forgot the real purpose of what they are supposed to do.

Thanks, and ANY info (ftp, www, books, magazines, etc...) much appricated.

73s, Matt N2MDB

Hello!

Recently I decided to become a radio amateur. Well ... actually I dreamed long time
of that but since september this year I go to evening school every tuesday. And
still I couldn t figure out what "HAM" means.
So, please forgive this simple question ... it s from a simple human being ...

Thanks in advance!!

Bye ...

>You may be licensed to use the spectrum, but you sure ain't a ham.
>
>Don't delude yourself. General Class and above to be a "real ham".

What utter arrogant nonsense. Perhaps you should re-read the Amateurs Code and think about it awhile. By those criteria, you "ain't a Ham" either. This kind of foolish elitism does more to damage the hobby than all the "lids" put together. Another point, you're beating a dead horse.

Mike-N9NCR

3349. Code? Just my 2 cents...

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-07 00:00:00 UTC
From: scottbj@water.ca.gov
Message-ID: <4a7m9s$bgg@zephyr.water.ca.gov>
Source record: 234145

I'm 30 years old now and have always been interested in getting a license. I just never got around to it I guess. When I was 16, I built a Heathkit receiver and spent many hours listening to people all over the world. But, I was a lazy teenager and I guess the code and theory was mainly what kept me from getting into Ham full force.

My dad has had his General Class since before I was born. One thing I aquired from him and from my inability to get on the air, was a tremendous respect for the hobby and for the people who took the time to study.

I plan on taking my first exam in January, I will not go for the no code tech exam. To do so, I feel discredits the real hams out there. Thats the philosophical reason though. The practical reasoning falls within what I feel is a real threat of SW becomming a CB like environment. I've hear both sides and both have valid points, but for me, you can chalk up one vote for the old timers. I would hope that means more to you coming from someone who is still stumbling over the code!

Now let the flames begin.... :)

SB DX ARL ARLD061
ARLD061 DX news

This week's bulletin was made possible with info provided by Tedd, KB8NW, the OPDX Bulletin, Jan, KX2A, Alberto, LU1DZ, and Contest Corral from QST. Thanks to all.

ANDAMAN ISLANDS, VU7. Jim Smith, VK9NS, plans to return here in February.

MYANMAR, XZ. XZ1A equipment remains in place with activity by OH1NYP and OH2BH expected in January. They will concentrate on 160 and 80 meters. XZ1A cards are expected to be in the mail by early January.

AFGHANISTAN, YA. A European PacketCluster spot shows YA9XL on 40 meters between 1730 and 2230z. The operator stated to QSL via F5TCN.

VANUATU, YJ. Daniel, FK8FU, should be active on all bands December 18 to sometime in January. QSL via N5AU.

KERMADEC ISLAND, ZL8. Ron, ZL1AMO, and a group of ZL ops plan to be active in May 1996. Landing permission has been granted. See December QST for more information.

NORTH AND SOUTH COOK ISLANDS, ZK1. LA1TV, LA1LIA and LA9JX will try to be on the air as ZK1ATV, ZK1LIA and ZK1NJX respectively, from Aitutaki Island, IOTA OC-083, December 9 to 14. They hope to operate from OC-014 December 28 to January 4. On CW try 3505, 7005, 10105, 14005, 18075 and 21005 kHz. For SSB try 3795, 7045, 14195, 18145 and 21295 kHz. QSL via home calls.

LIBYA, 5A. It has been reported that Ted, LZ1WR, plans on operating 5A1A sometime in March. He hopes to augment low band antennas with monobanders for the higher bands.

TOGO, 5V. Dave, 5V7MD, has returned to Togo. He operates mostly SSB and a bit of CW. Try 14165 kHz daily at 2130z. QSL with SASE via AB7BB, direct only.

JAMAICA, 6Y5. Alan, G3XAQ, will be active now until December 12 as G3XAQ/6Y5 with QRP CW. QSL via G3XAQ.

RWANDA, 9X. Mark, ON4WW, has received his new call sign 9X4WW, replacing 9X/ON4WW.

SOVEREIGN MILITARY ORDER OF MALTA, 1A0. 1A0KM will be on the air from around 1500z December 8 until December 17. This will be on all bands/modes, including satellites. Three stations will be active simultaneously. Look for A010 and 13 operations to start on December 12. QSL via IK0FVC.

TUNISIA, 3V. Frank, DL8YHR, plans to be active March 1 to 10 from 3V8BB on satellites AO-10 and 13, as well as 144 MHz EME. The EME set up will run 600 watts to four 17 element Yagis.

CHINA, BY. Bob, K9RHY, will be in Beijing until December 9 and will operate from club radio station BY1QH.

OGASAWARA, JD1. JQ1SUO will be active as JD1/JQ1SUO between December 23th and January 3rd. QSL via CBA.

NORTH KOREA, P5. Martti, OH2BH, reports in The DX News Sheet that negotiations for P51BH and P51XX operations are well underway. A formal announcement is expected shortly.

CROZET, FT5W. F5IJT and F5SZK will arrive on Possession Island in the Crozet Archipelago on December 14. They will sign FT5WE and FT5WF, respectively. They will try to have two stations active for their 12 month stay. Modes will include CW, SSB, RTTY, SSTV and packet. On CW try 3505, 7005, 10105, 10115, 14005, 18075, 21005, 24890 and 28005 kHz. For SSB try 3792, 7045, 14145 14245, 18145, 21245, 24945 and 28445 kHz. And listen for beacon station FT5WE on 6 meters. QSL FT5WE via F5GTW. QSL FT5WF via F5IZK.

MACQUARIE ISLAND, VK0. Warren, VK0WH, is now active from Macquarie with commercial gear. He will be on the island for 1 year. Operating frequencies are 3570 and 14130 kHz SSB, and 7010 kHz CW. Warren was heard recently on 7009 kHz at 1130z. Starting December 10, he will have a regular schedule with VK4ATS at 1000z on 14130 kHz.

DJIBOUTI, J2. Tom, J28ML, reports that J20RAD will be on the air from December 8 to 14. Check 80 through 10 meters for CW, SSB and RTTY. QSL via the Djibouti bureau at PO Box 1076.

SOUTH ORKNEY ISLANDS. Operators Hector, LU6UO, and Ernesto, LU1ZPF, will be active from Laurie Island from mid-December through late February. QSL via LU6EF.

THIS WEEKEND ON THE RADIO. It's time again for the annual ARRL 10-Meter Contest. Check page 130 in November QST for complete rules.

The TARA RTTY Sprint starts at 2100z Saturday and ends at 0100z Sunday.

Source record: 234150
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 10th of December and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

And we start with the result of the election for the 1996 - 98 RSGB Council. The votes cast were as follows:

For Ordinary Members of Council:
A J Wright, G0KRU 970 votes,
N Lasher, G6HIU 1293,
D Hough, G4WRW 775,
J Case, GW4HWR 1239,
M H Claytonsmith, G4JKS 2821,
R Snary, G4OBE 636,
R Biddulph, G8DPS 1659, and
J Greenwell, G3AEZ 1748 votes.

M H Claytonsmith, G4JKS; R Biddulph, G8DPS; and J Greenwell, G3AEZ are therefore elected.

In the Zonal elections, D Glover, G1VJP, received 337 votes and G Adams, G3LEQ, 571 votes in the Zone A - North of England - election. G Adams, G3LEQ, is therefore elected. D Whalley, G4EIX; F C Stewart, G0CSF; J N Gannaway, G3YGF; and T W G Menzies, GM1GEQ, were all elected unopposed for Zones B, C, D and G respectively.

The RSGB's Licensing Advisory Committee will be supervising a survey of all radio amateurs to ascertain their views on the qualifications and licensing structure necessary for the United Kingdom Amateur Service. The survey will also be open to listeners and other interested parties, and will not be confined to RSGB members. More details will be broadcast on GB2RS in the future.

RSGB Headquarters in Potters Bar will be open to visitors on Saturday, the 16th of December, between 10.00 am and 4.00 pm. The bookshop, museum, library and GB3RS shack will be available. Morse tests are also available on demand between 11.00 am and 12.30 pm. Don't forget to bring two passport-size photographs and the appropriate fee with you if you wish to take your Morse test at RSGB Headquarters.

Would RSGB members in Derbyshire please note that the RSGB Liaison Officer for Derbyshire, Ken Frankcom, G3OCA, now has a new phone number. It is 01332 720976.

Would all contributors to the GB2RS news bulletin service please note that, because of the Christmas holidays, there will be earlier deadlines

for some bulletins. The deadline for the Christmas Eve GB2RS will be first post on Monday the 18th of December - that is, two days earlier than usual. The deadline for the GB2RS broadcast on New Year's Eve is also the 18th of December. The first broadcast in 1996, on the 7th of January, will be compiled as usual on the Wednesday morning preceding the broadcast, that is on the 3rd of January. Just to repeat those dates: all material to be included in the GB2RS broadcasts on the 24th and 31st of December must be received by first post on Monday the 18th of December. This includes details of club meetings for the regional section of the broadcasts. Material for inclusion in GB2RS may be sent by post, or - if you prefer - by fax to 01707 649503, marking it clearly "for GB2RS News". That number once again is 01707 649503.

The German national amateur radio society, DARC, is looking for nominations for the prestigious Horkheimer Prize 1996. Named after Rudolf Horkheimer, one of the first radio amateurs in Germany, the prize is awarded "for merits in amateur radio, its further development, and the targets of DARC". The prize can be awarded to one or more persons, or institutions, and is open to anyone who is a member of an IARU amateur radio society, such as the RSGB. The prize consists of an etched glass trophy which will be awarded at the "HamRadio 96" convention at Friedrichshafen in June next year, and a monetary prize for non-personal use, which is to be spent "for promotion of amateur radio".

Nominations, listing the name and address of the proposed amateur, a substantiation of the proposal, and any further information, should be received by the 31st of January. Self-nominations are permitted. The address for nominations will be printed in the January RadCom.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

Phil Weaver, whose calls include VS6CT and G4JMB, plans to be active from on board the QE2 around Saturday the 16th of December. Look for him on SSB.

From the Ivory Coast, F5UJQ will sign TU4DA from Tuesday the 12th of December for over three months. Activity will be on all bands from 40 to 10 metres, SSB only.

And from Glorioso Island in the Indian Ocean, FR5ZU should be active as FR5ZU/G from now until Friday the 15th of December.

Now news of some special event stations:

SP0TPAX is a special event station in Poland on the air from the 1st to the 15th of December. It commemorates the 70th anniversary of the first amateur radio contact in Poland which took place on the 6th of December 1925 between Tadeusz Heftman, whose callsign was TPAX, and Dutch amateur Ten Kate, NOPM SP0TPAX is active on all the HF bands on CW, SSB and RTTY.

And PA6AAA is a special event station in the Netherlands celebrating the one-thousandth broadcast of the weekly "Randstad Amateur Net". PA6AAA is on the air this weekend, from Friday the 8th until Sunday the 10th of December, on all bands from HF to UHF. British amateurs are invited to call the station and every contact will be confirmed by QSL card.

Next the Rally News:

And rally organisers seem to be taking a Christmas break. We know of no rallies for today, or any until the 21st of January.

The Wakefield 23 centimetre voice repeater GB3WC, which operates on channel RM15, returned to service on the 30th of November. It had been off the air since last year.

Now for the HF contest news:

The ARRL 10-metre Contest is taking place this weekend, the 9th and 10th, for 48 hours. CW and/or SSB can be used and everyone works everyone else. Send a report and serial number.

Next some VHF contest news:

The final session of the RSGB 432 MHz Cumulative Contest takes place on Tuesday evening, the 12th of December. The rules are in the June RadCom. Please note that this contest takes place between 1930 and 2200 local time, as printed in the rules, and not at the times stated in the Contest Exchange column in the November RadCom.

And now the solar factual data:

The period from the 27th of November to the 3rd of December saw solar activity rise from very low, to low, levels. A B3.0 X-Ray burst was reported on the 27th, together with a geomagnetic substorm mainly affecting the higher latitudes. Sunspot counts rose from last week, being up to 18 on the 29th, and with a mean of 14. However, the increase did not bring any benefits. Solar flux levels hardly changed, averaging 73 units, the same as last week. In previous solar minima, flux levels dropped to about 67 units so there is still some way to go. No flares were reported during the period. X-Ray levels have remained very low, and were at A1.0 every day, except for the 29th, when a burst up to A2.3 occurred. The average was 1.2 units. Electron fluence has declined from moderate to low levels. The 90-day solar flux levels on the 27th are still at 75 units.

Geomagnetic activity has been very unsettled due to the passage of coronal holes. On the 27th a sudden substorm occurred, taking the Ap index up to 21 units. This mainly affected the more northerly stations. The average was Ap 12.2 units. The aa indices, as supplied by the British Geological Survey for the period from the 21st to the 27th of November, saw mainly very quiet levels, down to only 2 nanoTeslas at times. However, the sudden substorm on the 27th raised levels to 137 nanoTeslas; about K6. This made the weekly daily index average 13.5 nanoTeslas, or about K2. Up to the 26th, the solar wind averaged 320

kilometres per second, which is about normal, with low densities averaging only 10 particles per cubic centimetre.

I'll repeat the figures:

Spots - 14, Flux - 73, Ap index - 12.2, X-Ray flux - A1.2

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the extended period from the 24th to the 30th of November, averaged 6.2 MHz, although on the 26th it was down to only 4.4 MHz. The magnetic storm on the 27th prevented any reliable readings being made. Darkness hour lows averaged 2.6 MHz and hardly varied from day to day. The highs are now between 1100 and 1500 hours every day, with the darkness hour lows around 0500 hours.

I'll repeat the figures: highs - 6.2 MHz, lows - 2.6 MHz.

And lastly the solar forecast:

This week the quiet side of the sun will be looking our way. Solar flux levels are expected to decline to about 72, geomagnetic activity is expected to be quiet, and no coronal holes are now on the disc. MUFs during daylight hours in the south are expected to be about 20 MHz and the darkness hour lows about 7.0 MHz. Levels for the north are expected to be down by at least 2 MHz. The best paths are North / South. The maximum for the Geminids Meteor shower should occur at 1000 hours on Thursday the 14th of December.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Quebec and G7 Victor Yankee series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Papa series.

You don't even need a green card or US-citizenship. The only thing you need is a valid postal address in the US for the FCC to send you your license. As a German citizen I passed the General class license and as an address I gave the address of a friend in Virginia (whose address probably shows the highest density of hams in the whole US).

> the hobby. Reducing standards and thereby fundamentally
> altering the very character of amateur radio.

Poor babies. Then again, maybe the change wasn't *all* bad.

During how much of its history has amateur radio's growth
kept pace with, or exceeded, the rate of increase of the
population?

How much of the HF band (that part that most uses CW, and
has the best characteristics for DX) was trashed by the
evil No-Coders?

When did General and above drop their CW requirements?

I've met some excellent, encouraging, helpful folk in the
ham ranks; one's who make you want to advance and play in
their sandbox, too.

The grinches almost make up for the good ones, though.

I'm glad that my wife and kids haven't met any, yet.
They're still interested in getting their tickets, playing
with FM, SSB, packet and the like.

If the water's not shark-infested, they'll likely want
to upgrade.

Anyone got any good shark repellant?

>Why should someone have to know how an oscillator works in order to use a ham radio?

The short answer is Part 97.1. Most radio services, of course, don't require such technical knowledge to operate, but you have chosen the one service which has technical exploration and advacement specifically written into it's regulations. Three of the five subparts of 97.1 mention this aspect of the service, and that happens to be about the same proportion of technical questions on the tests you're studying for. Would you apply the same challenge to all of those questions as well? Remember, you are not just an operator, you are permitted to build and service your equipment as well. Whether you do or not (and it is both easy and vastly rewarding), you are expected to have at least a passing acquaintance with what goes on behind the panel of your Yaecomwood. BTW, it only takes a few minutes to explain the basics of an oscillator. You might actually find yourself someday building a few for the pure pleasure of it.

>That is like saying you can't get your drivers license until
>you can explain the inner workings of a combustion engine.

There are other services that will let you get your radio "driver's license", such as GMRS and CB. They exist for different purposes than does amateur radio.

>in the same vein there would be many responsible hams who don't know
>how an oscillator works.

The issue is not just responsible operation. The issue is understanding the reason for the existence of amateur radio.

hello brian,

the harris HD6402 is what you need. Its easier to use than the
common AY devices. Baudrate is externally generated. The IC is
a serial/parallel converter and vice versa. Baudrates are up to
100kBaud. I use it to serialize the AD converter output of my meteosat
converter.

Try http://www.semi.harris.com to get a datasheet. The fax infothek
really works wordwide!

If you have futher questions drop me a note!

Practically none of the 'non CPU' UART chips that were so common in the 70s
and early 80s are available anymore. You can get the same results with
many microcontrollers now, but that requires investment in tools and
programming hardware.

The easiest would be to buy a ready-made RS232 to centronics converter,
the way most favoured with the sci.electronics group would have to
be using a microcontroller. Cheap too if you're not counting the hours.

I haven't called HRO's WATS line, but there in-store service has been good for me as a newcomer. All the folks in San Diego have been willing to talk and answer questions and steer me to things that I might like. I went there several times before I bought anything and asked about things I had read about.

I understand the point about phone service being not the best way to get good information exchange, but at this point, I'm pleased with HRO support and din't want them impugned by association.

>As someone studying to become a ham, I was very dissapointed
>to stumble across this newsgroup and see these kinds of attitudes.
>Mostly, because I don't understand what CW has to do with the
>science and technology behind radio communications.

Absolutely nothing. But it has everything to do with being the
initiation rite of choice for YE OLDE FAHRTZ and what they mistakedly
think is their own little "private club", otherwise known as "amateur
radio."

Don't worry. Times are a' changin'. First it was the no-code Tech
license, next it will be the dropping of the CW requirement to 5WPM for
all license classes. Finally, it will be the abandonment of the ITU code
requirement, followed quickly by the abolishment of the remaining Morse
requirements here in the U.S. It's only a matter of time; the ranks of
the no-coders are growing at a feverish pace while the opposition
decreases daily as more and more of the adamant pro-coders get the silent
key due to old age and it's related illnesses.

Since I have been reading this newsgroup, there have been several discussions about wether or not there should be a code requirement for a Ham Radio license. The People who say CW is dead, must not listen to their radios very often. I personaly don't really care for code. I am only a Tech Plus, but working on my 13 wpm. CW in heard on ALL the ham bands. I just recently purchased a 2meter SSB radio and was amazed at how much CW I heard (not a lot, but much more than 2 meter FM!) Since CW is such a big part of ham radio, I don't know why people want it taken out of the testing process. I have only had my license for around 6 months. When I took the no code test, I had no intention of learning code. But the more I got into the hobby, the more I wanted to upgrade to the HF bands. I have 4 friends who received their Tech no code licenses around the same time I did and all but one has now passed 5wpm (the other is working on it.) Until CW is no longer a large part of Ham Radio (listen to all the CW on the low end of any of the HF bands), I think it should remain in the testing process for HF licenses (and this is coming from a person who doesn't like code and will probably not use it very much.) Anyway, that's just my own thoughts and was not intended to flame the anti-code hams (some of whom have very good arguments themselves.)

KE4ZQV Hope to catch you on HF soon!

: : or links at once, with autopatch and options to cross-link the repeaters
: : for nets etc.

: Jerry - we've been using the Link COmm products and are happy with them.
: We started with an RLC1 (2 port controller) and a RLC6 (3 port link
: expander) and then migrated to an RLC4 with autopatch (4 port controller,
: patch is one port).

: They're pretty responsive to requests and helpful.

: Leon WA4ZLW
We have a Link 4 port here too, the nice thing about it is that the
updated software (new versions) is usually available by ftp, so then we
load it into the chip on board, otherwise you pay 70 bucks approx and replace
the chip. Its good, we like it, we have autopatch, a couple repeaters linked
and all kinds of remote base stuff.

3V8 - [Tunisia] 3V8BB was active again , this station belongs to the
Bir-el-Bey Institute and remember that this is the only legal
station in this country.
The operators were : DL8OBC, DJ7IK e DL2OBF.
The 3V8AS station is a pirate ...
9U - [Burundi] EA1FH is active in this country with the call 9U/EA1FH
This last weekend he has been on 18 Mhz.
AH0 - [Saipan] The Diamond Project Team was active in the CQWW CW in
a Multi-single effort with call AH0T.
The operatores were : JA6VZB,AH0T,JR7OMD,WI3O,JI3ERV,NH2C.
QSL only via JA6BSM.
EA - [Spain] During the URE V-U-SHF Convetion in Alicante (1-6/12)
a special station will be on the air with the special call
EG5UCA.Activity on all bands.QSL via EA5URA (Direct or Bureau).
KC6 - [Palau] Next year a group of JA's operators will go to this
country.They are going in hollydays but they plan to do some
radio operation.
Two teams will be active , they are :
Team 1:KC6IY, Yoshi (OP: JF6BCC) QSL -> JF6BCC
KC6VO, Yokoi (OP: JM6VOV) QSL -> JM6VOV
KC6WG, Jun (OP: WH0AAV) QSL -> POBox 1941,SAIPAN MP 96950
Period: 13 - 16 January 1996
Team 2:KC6FS (OP: JH6RTO)
QSL -> JH6RTO or Direct to :
Seiji Fukushima, 2-183-A207, Soubudai, Zama,
Kanagawa 228, Japan
Period: 13 - 16 jan 96
KC6FS, Seiji will also be active from Palau.
Specially CW due to power limitations.

KH4 - [Midway Isl.] This is the #1 Most wanted in Portugal , activity
from KH4/NH6D this last week was very poor for CT's.
He uses a Log-periodic Antenna.Daniel (PT7BI) announced that he
probably will show up on the Brazilian Net (14.240Mhz 0900UTC).
PY_iota - [Brazil] PY2HA (Luis) is active from IOTA SA-071.He normally
shows up on the Brazilian net or on the weekends on 21.225Mhz.
SP - [Poland] SP0TPAX is the special event station for the celebration
of the 70 years of Ham-radio in Poland.Activity on all bands ,
CW SSB and RTTY.QSL via SP2FAP or directly to :
"QTC" PO Box 18, 82-312 Elblag 13, Poland.
From 1 to 15 this month.
TU - [Ivory Coast] ON6TT (Peter) went to this country for a special
Red Cross mission were he will stay for four weeks.
Don't expect to much radio operation just because is in work and
almost all of his equipement still on VK6.
VK0 - [Macquarie Isl.] Warren Hull will be in Macquarie for about one
year.His callsign is VK0WH.RTTY operations are expected.
Graeme Currie (VK0GC) could be active from Mawson Base...
VK9x - [Xmas Island] VK9XRS is the call of ND3A during his DXpedition to
Christmas Isl.
VP8 - [South Georgia Island] VP8CGE and VP8CID will return soon to this
Island.
VP8 - [Antartida] VP8CRE is active from Faraday Base (Argentine Isl).
IOTA AN-006.

****

4L4MM -> Tom (DL8AAM) has had some problems in receiving this station log's
So e tells to try QSL direct to the operator address :
Merab Shinjikashvili, Box 97, Tblissi 380004, Rep. of Georgia.

5A1A -> As it seams this operation is in the good way to accepted by the
DXCC and the QSLs are already being sent (!)

5X4A & 5X4B -> Tom (DL8AAM) sent out the last package of QSL's of this two
stations.If you sent the QSL to Tom and did not received QSL please don't
send another.The problem is that some parts of the Logs were lost and he
asked to the operators to send th elogs again.Be patient...
Tom also has logs for 5Z4FU.Tom prefers the Bureau to change QSL cards.

QSL Manager DF8WS -> Willi (DF8WS) is a well known QSL manager for Kyrgyzian
station (Pfx : EX) . He has logs for

RM4A , RM7M , RM0M , EX50V , EX/V31YM , EX0A , EX0M , EX7MM , EX9HQ WWSSB94
EX0V , EX/DF8WS , EX/KD6BKL , EX1M (op: EX0A) , EX1M(op: EX2A)
EX0O , UM8MDX , UM8MAA , RM8MM , RM8MU .

Willi prefers the bureau to exchange QSL cards . !

SCSDX -> South China Sea DX Team are the responsible ones for the activation
of P5 , BV9 & BS7 ... They have been recently in Myanmar with the call XZ1A
QSL via JA1BK.They are planning to make a DXpedition to North Korea !
They calls being used , maybe , are : P51BH and P51XX.

W5BWA -> Victor Pechorkin , QSL manager of UH8EA , RH0E , EZ5AA has moved to new adress: W5BWA , 5812 Hiawatha Dr., Alexandria, La. 71301

Buthan -> A51JM was reported as a possible pirate station . Only showed up a few hours in CW . The ones who listen him had to beam to different direction than Buthan !

Portuguese Awards -> There has been some lack of information in our awards specially because the operators continue to hide this informations.
When we know about then is rigth on the hour of operation !!!
We ask all HAM's to spread out all informations , in the century of telecomunications , we can all enjoy a good true spirit of HamRadio in comunity. [This was for CT's operators !]

Possible operations from IOTA EU-150 (Insua Isl.) in the next months.
This island is valid for DIP (Portuguese Islands Award MI-001) and for DFP (Portuguese Lighthouses Award)

3DA -> JM1CAX Mr. Tahara was QRV in 3DA as 3DA0NX to participate in the CQWW CW 1995.Before of that he was in South Africa operating with call ZS6CAX . The QSL for his operation has 3DA is via ZS6CAX.

HS7ECI -> OH4JK , Juha , Is not the QSL manager for this station , he asks not to send more QSL's to him , pse check the QSL route for this station !

Hummm,

My Kenwood TS-440 has a 800 CW offset. The Beat Freq. is 800 Hz below
the CW signal and the offset is up 800 Hz; so,

TX/RX in display is where you are.

7100.8 = 7100.8

Did you miss the point of the instruction? Maybe play with carrier of
WWV or other known source to validate.

KF0OS

As far as other people are concerned, it could be.

Killfiles work.

And it couldn't happen to a more deserving poster...except, perhaps,
to aa7up.

"Bye, Burt.

PLONK

3378. HF rig has 800hz offset for CW?

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-07 00:00:00 UTC
From: charles1@netcom.com
Message-ID: <charles1DJ781x.CBJ@netcom.com>
Source record: 234264

My TS820 manual states that the CW transmit is 800hz offset
to the receive. Why do they do that?

Assuming two CW operators have this same radio, how is it corrected?
(I know about the RIT control. How is situation corrected without RIT)

example:

OPERATOR #1 OPERATOR #2

<-- TX 7101.6
TX 7100.8 --> <-- RX 7100.8
RX 7100.0 -->

You are of course correct on this one Mike, except perhaps with regard to degree - the degree to which one must understand oscillators at a given class level.

I think Chad was asking (sorry if I'm wrong on this one Chad) why he must know how and why an oscillator circuit works. While you are correct Mike that at some point as he advances he will have to know and understand these things. At the Technician level it seems to be commonly accepted that it is sufficient to simply know what an oscillator is, and what it does. This I think would fulfill your "passing acquaintance" requirement.

3380. Words to the alphabet...

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-07 00:00:00 UTC
From: scoth@wolfe.net
Message-ID: <4a7jme$igu@news1.wolfe.net>
Source record: 234266

Greetings,

Does anyone have a list of the standard words corresponding to the alphabet? The "alpha, bravo, charlie..." variety? I've forgotten a few of the key ones (I'm inactive right now).

I can hit ftp site for web pages or gopher sites if you know the address.

Thanks!
Scot

Michael P. Deignan (kd1hz@anomaly.ideamation.com) wrote:
: In article <4a2mj5$85c$1@mhadg.production.compuserve.com>,
: Mike Whatley <73057.2225@CompuServe.COM> wrote:

: >The real "shame" is the fact that most white hams believe that
: >amateur radio *isn't* a racist hobby.
: >
: >I stand by my original assertion. Ham Radio is an institutionally
: >racist hobby.

: Normally I agree with your affirmative action views of amateur radio,
: but I have to disagree with this particular viewpoint.

: While you might be able to make a case that the distribution of race
: in the amateur radio population does not match that of the US population
: as a whole, there are a myriad of factors that can cause such skewing.
: Merely the presense of an abnormal distribution does not prove a cause
: and effect relationship. While the effect may be that amateur radio
: is inherently not a minority hobby, that does not mean that amateur
: radio is a racist hobby.

: This isn't to say, of course, that amateur radio isn't a prejudiced
: hobby. I freely admit that I generally avoid talking to CB recipients
: of affirmative-action ham radio licenses. In that respect, you could
: say that yes, I am prejudiced, but as those same recipients fall into
: numerous race categories, you would be hard pressed to classify me
: as a racist.

: Furthermore, I would assert that amateur radio inherently is *not*
: a racist hobby, since you have no basis to judge the color of a
: person's skin based upon his or her callsign. When I'm on HF, I
: cannot tell if N0XXX is white, black, or purple.

: Thus, I believe your original assertion is, in fact, incorrect.

One could make the argument that amateur radio is in fact racist
if they could prove that ...

1. amateurs only recruit prejudiced persons into the hobby.
2. amateurs discourage minorities from getting involved
or participating.

Since the VECs and VEs have absolutely no control over who passes a
test (outside of bias in the questions themselves), there is no way
to stop anyone from obtaining a license.
To wit...
A. VEs must test any applicant who appears and presents proper ID.

B. Tests are graded against the same standards for all applicants.
C. Forms are forwarded to the VEC and then to the commission with
no indication of race/color/creed/origin/etc.

Point #2 above is much more difficult to disprove. Clearly, when
using SSB, you can hear the other operators voice. This often
tends to give 'clues' as to attributes of the other operator.
It is also very easy to put your call sign CD in, enter the other
call sign, and know immediately the operator's full name, address,
city, country, age, etc. While this doesn't guarantee anything,
it is often enough for those who wish to discriminate to make up
their mind.

Local operators are also 'seen' at hamfests, club meetings,
public service events, etc, so that while there may be no
discrimination on the original contact, it may certainly
occur on later contacts after the sighting.

Unfortunately, it only takes one or two blatent examples of
some jerk to convince people to make overall generalizations
that 'amateur radio is racist'. I suppose that if it were
known that the same 'jerk' was also a steelworker, they would
also say that 'all steelworkers are racist'. Sometimes this
happens, sometimes not.

I disagree! I have TWO RLC3 and one RLC2 in use right now..ALL
pass PL tones with no problems...

ANY Good controller will pass 60 Hz to 5 Khz with NO
degredation...my rptrs all use FLAT audio and I am sending
LinkCom a mod sheet on the mods needed to allow local audio
(autopatch, DVR, etc) to work on such a system...

My RC850 would pass PL with no problem also!

Dear Friends:

I have a friend who has been in a wheelchair for about 40 years
after having been injured in a football game in high school. He would
like to be able to study for his ham license, and can use a computer.

Would appreciate someone sending him a floppy disk with shareware
and/or freeware for code practice (he probably will not have to send)
and question pool study and/or anything else you think he could use.

He has written to handiham without any response. Thanks for any
help. His address is:
Bill Clark P. O. Box 276 Gorman, TX. 76454

Thanks, WA5PUA, John

Gee Mike, I had to pass a code test to up grade my tech ticket to tech plus. As long as you are defining a "real ham" as someone who is tested (and probably rarely if ever uses cw again) as someone who can communicate or at least listen and understand a cw message, then I guess you have to include Tech Plus license holders.

I found out I enjoyed CW. I use it several times a week. I can't wait to get up to 13wpm to pass the general, but I never would have tried it at all if I hadn't gotten my no-code tedh ticket first.

You must spend a lot of time on 40m phone.

It's possible to obtain replacement nicad 'cells' for the BP battery packs, at 'significantly' less cost than the cost of an entire 'new' pack from Icom. . Look in the back of any ham magazine for an ad from 'Mr Nicad' in wisconsin.

Thought the packs came apart with a coupla screws (or am I remembering the wrong 'pack') ?

Because without that knowledge you may be unable to comprehend or to cure
unintended oscillations in rf amplifiers, for example.

> That is like saying you can't get your drivers license until

Radio amateurs are allowed to operate non-type approved equipment and to
make internal adjustments to their transmitting equipment. I would suggest
that making adjustments to say the brakes on your car without a good
understanding is an equally scarey proposition.

> That is like saying you can't get your drivers license until

Maybe along with no-code, there may be room for an operator-only type of
license with fewer skill requirements and fewer privileges. Why not
call it Citizen Band Radio, and allow use of type-approved equipment only
and with no right to alter the transmitter settings?

Here is the way to send money to the UK from USA. Call 1-800-424-2923.
This is Ruesch International. Tell them how many GBP (Great British
Pounds) you want. They tell you the exchange rate, add $2.00 fee. You send
a personal check to them and in a week you have your check ready to send
to UK. Works great and far better than most banks. My local bank now wants
$20 fee regardless of size and they also take several days.
Address is Ruesch International, 700 11th ST NW, Washington, DC 20001-4507.
Ron w8gus.

You are talking about operating in another country using a US license
to get a reciprocal permit.

I am talking about operating in the US using a UK license to get a
reciprocal license. The US rules are more restrictive than some other
country's rules. Generally the US bands are as large or larger than
the bands in other countries.

Check out the FCC part 97 reference in my article (97.107(b)2).

From: amoeba@winternet.com
Message-ID: <4a7r50$5jt@blackice.winternet.com>
Source record: 234285

What is going on these days with license classes? I have been out of the hobby for 2 years and I see alot has changed.

I was originaly licensed as a novice back in 1990 after passing the written and a 5WPM code test. 2 months later I upgraded to Tech.

Now, when I am on the air and someone asks what my class is they laugh at me because they think I am a Tech Plus. I really think the FCC should have named it differently (maybe newbie or neophyte). Then when I talk to some folks, I get the feeling that Tech Plus is superior to Tech. Folks telling me to upgrade from Tech to Tech Plus. WTFO?!

What is the deal and why am I asking and not just upgrading to general?

I do get many messages agreeing with me on my views on amateur radio but none better than this. They ALL want their names removed because of the gutless abuse hams lay on them. What follows is how YOU are viewed by people in the real world, those with ability and a real life.

Date: Thu, 07 Dec 1995 00:32:51 -0800
From: <**ve*@**.com>
To: Burt Fisher <k1oik@ccsnet.com>
Subject: Re: rec.radio.amateur.burt_f

Hi Burt,

I've been a techie most of my life. While I happily admit to being a geek I have an active life as well and enjoy many outdoor activities. I'm a partier and very outgoing. Last Winter, I sold my half of a rather large communication service to my partner to free up some time to spend with my family. This however freed up more time than I imagined so I decided to persue an old interest and get my Ham license.

Well, my RF theory was beyond rusty. I went back and brushed up on it and then studied for my Tech. I took my tests (no code) and aced them both.

I thought I was joining a unique fraternity. I thought this would be fun. Instead I have fat old fossils looking down their nose at me because I didn't feel it necessary to learn code. Imagine... I'm the guy they call to repair their computer when it breaks or answer their idiot novice computer questions but they think I'm not a Ham because I'd rather communicate at 28.8kbps than at 5wpm. Silly me. Then I listen to these silly bastards on the radio. Do they talk about anything important? Nope... I constantly hear these hummers stumbling over their words, speaking just because it was there turn and they wanted the thrill of hearing their empty words go out on the air-waves.

I couldn't be less impressed.

Anyway Burt, I decided that I will just never measure up to the noble tradition that is Ham Radio. I'd have to give up my wife and my social life so I can persue the excitement of contesting and working rare DX. I need to devote my free time to learning an esoteric code written in a dead language so I can transmit inane and hollow statements to my fellow Hams on the other side of the world. I need to alienate myself from my friends by constantly boring them with my latest Ham adventures. These are big shoes to fill and I'm afraid I'm just not up to the challenge.

I currently have a very modest investment in an HT and TNC and I don't think I'll have any trouble selling it.

I think I'll turn my interests to the persuit of Pirate Radio. It's still kinda geeky, kinda cool and no self-respecting Ham would go within fifty feet of it. Maybe I can get the FCC to revoke my Ham license (the only thing I would be prouder of is an excommunication by the Catholic Church).

I just wanted to send this to you because, when I first started reading the rec.radio groups, I thought you were just flame baiting. Then, the more I watched, the more I realized that you were probably right.

Cheerio,

XXXXXX

Also, You can re-post this if you wish. Please though leave out my name and any info past the "Cheerio".

Can anybody give me info on the net that gives assistance to those sailing in the South Pacific? I believe that they relay messages from sailboats to land, track sailboats and update weather reports for cruising sailboats. Are there any www sites? Any help would be appreciated. Thanks, Don Giordano. I can be reached at: giordano@cogent.net

This comment reminds me of a boresome, local amateur (northern Virginia/DC area) who announces that he "doesn't talk to no-coder's, except on Fridays" when checking into one of the local repeaters. It's not clear to me what his objective is when doing this.

>TRUTH IS TRUTH REGARDLESS OF THE SOURCE

Sad isn't it. Why does this guy have so much anger? This sort of thing
usually has some deep seated emotional imbalance behind it. A normal,
well adjusted individual wouldn't really care much about what others
thought about such a trivial thing as morse code. This is the same
sick guy who responded to my opinion that some of us just don't feel
as great a need for code as he does with a private email full of
insults and 4 letter words. I looked up his profile on AOL. His name
is Brian and he is 16 years old. Probably has lots of pimples.

why do you care if we are "lazy, unmotivated, self-pitying,
entitlement mentality-driven ***losers*** who expect the big, bad
world to give them everything on a sliver platter without they work
for it" type individuals?

Actually it doesn't bother me a bit if that's what I am because I
don't know code - cool, I accept it. It must be these personal
attributes which has helped me bring home a six figure income for the
last 10 years so I guess I'll just keep being a lazy, unmotivated,
self-pitying, entitlement mentality-driver ***loser** - it seems to be
pretty lucrative.

The purpose of allowing entry into the service in order to learn the material that will be necessary for "permanent" licensing. If I still haven't made my position clear, it is that the technical knowledge required to pass the Tech written is nowhere near sufficient to reasonably fulfill our Part 97.1 mandate, or to be allowed permanent, full-power privileges in our technical hobby.

>given only a "temporary" license? <...>

If your 4th graders can't learn the added material by the 9th grade, then so be it. Lots of licenses have explicit age requirements -- all I'm asking is an explicit knowledge requirement. Will amateur radio fall apart if we don't snag enough 4th graders? No, it won't -- historically the vast majority of hams first got licensed many years older than that. IMO, 10 years old is too young to get much out of the license anyway, but for those who want to do it I wish them the best of luck. And during their apprenticeship I'll be happy to help them learn the material for their permanent license. Apprenticeships aren't

supposed to last forever. What you choose to call a penalty I call an incentive.

The original post, from which Chad quoted, also spoke of the (simpler) requirements for a basic license, so the comments about requiring knowledge of oscillators and my response were aimed mostly at the next level of testing. Are there, though, questions on the Tech written that even require knowing "what an oscillator is, and what it does"? I'm not sure that there are.

3415. TV Audio Reception

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-08 00:00:00 UTC
From: norman@saba.kuentos.guam.net
Message-ID: <4a9pme$hrs@lehi.kuentos.guam.net>
Source record: 234166

I have a ICOM R7000 and have noticed that there is quite a bit of distortion when listening to TV audio signals. Placing the radio in the FM (wide) position and attenuating the signal doesn't seem to help. I've heard better audio from $30 AM/FM/TV portables....

Any comments or suggestions?

Regards

Norm

3416. Why Morse Code Today?

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-08 00:00:00 UTC
From: arthurc@crl.com
Message-ID: <4aa5q4$ag5@crl4.crl.com>
Source record: 234167

Why learn Morse Code -- an outmoded system devised for an era that lacked all the improvements of modern communication? Everyone knows the "CW gets through when even SSB can't" argument. But I want to urge another, much simpler set of reasons to get into and enjoy CW:

1) Morse Code is fun

To experience the truth of this, I think that newcomers need to SEND, and not just receive. I staggered though my exams after practising with the Gordon West Tapes, a Mac CW program, etc. These were all very good; but it wasn't until I actually started sending it that I got any real pleasure out of CW.
After I passed my 20 wpm, I rewarded myself with a Bencher keyer. Sending with a nifty device like that is just plain fun. It makes spacing much easier, and gives a smoother flow to the code.
I find that, to send CW successfully, I have to put myself into a kind of trance. I have to
a) Figure out what I want to say, and keep it in mind while
b) I break each word down in succession into its letter components,
c) translate those letters into CW, then
d) tell my fingers to do their job.

There is a gap between each element in this process -- a gap that probably differs for each operator. I find that I can translate just a bit ahead of what my fingers can tap out. I HAVE heard tales of old-timers who were so proficient that they could carry on a normal conversation with folks in the room with them while carrying on a completely different conversation in CW! I'm not there yet -- but I can get a glimpse of how that might be possible.
This mental and physical process of translation may not be everyone's cup of tea. But for those who are even moderately proficient and have a good keyer -- well, give it a try. Take it from me: sending adds real pleasure to your CW experience. If you've only practised receiving, you're missing 80% or more of the fun.

2) The Historical Dimension

This too may not be for everyone. But every time I get on my HF rig with the keyer I take great satisfaction that I'm using a mode of conversation that is the Mother of All Long Distance Communications -- the parent of the very internet we are now using. Of course, they didn't have fancy keyers or high-tech HF rigs in the olde days; but the mode of communication is close to what they used a century and a half ago. I wonder if the historical pleasure of using this time-honored mode is similar to what train buffs feel when they ride an old steam engine?

Enough for now. --... ...--

amoeba@winternet.com (Who wants to know?) writes:

>Now, when I am on the air and someone asks what my class is they laugh at me
>because they think I am a Tech Plus.

There is simple advice to be had here. That is, don't operate where you're not wanted. There are many repeaters around that operate on the rule that they are the true believers. All others are infidels. Turn the channel...

Find a group who you enjoy listening too, and then join in. If you listen long enough on various repeaters or simplex channels, you will quickly see who is playing games, and who is enjoying the hobby. There are several repeaters in town here that are always in use. The problem is, they are always talking about people behind their backs and generally accomplishing nothing. They sound like a herd of old ladies at the wash room.

Turn the channel, un-program them from scan.

3421. Unbelievably Great Alinco Service

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-08 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <4aa27k$2s9@cville-srv.wam.umd.edu>
Source record: 234172

I have a 1.5 month old DX-70T. The tone board didn't work,
and the PLL liked to unlock for a split second on 6m. I
called up the service center and talked to Tony, their very
knowledgable Tech (also a ham, BTW).

After 10 minutes on the phone, during which we tried to resolve
the problems over the phone, it was determined to be impos-
sible without sending it in.

I shipped it to them, and it arrived last Thursday. It was
worked on by Tony this Tuesday thru Thursday - he found a
broken trace on the CTCSS board, and adjusted the PLL and
the 6m problem went away.

I got it back TODAY (next day air, their expense)!

To all radio amateurs

SB QST ARL ARLB109
ARLB109 FCC Vanity Call Sign

FCC Vanity Call Sign Application Form 610V is Now Available

FCC vanity call sign application Form 610V is now available, but the FCC is not yet accepting completed forms for filing.

In response to requests by radio amateurs, the ARRL has mailed 9000 copies of the form. If you requested one from the ARRL and do not receive it by December 16, call 860-594-0300.

The FCC is expected to announce opening dates for the first vanity call sign filing gate in early 1996. You can obtain FCC Form 610V (along with FCC form 1070V and FCC vanity call sign information fact sheet PR 9000, number 206v) by writing ARRL, 225 Main Street, Newington, CT 06111. Please include an sase.

Form 610v also is available from the FCC via the internet at http://www.fcc.gov/Forms/Form610V or ftp://ftp.fcc.gov/pub/Forms/Form610V/, or by fax at 202-418-0177. Ask for Form 006108.

The FCC Forms Distribution Center will accept orders in about one month. Call 800-418-3676.

> N1MSV

My Pachard Bell 486 is 3 years old. And Tech support there is wonderful...
I had 2 Keyboards Replaces by 2nd day air at NO CHARGE...

From Experience... The Help you get from a company Depends on YOUR
ADDITUDE!!!. I am well satisfied with My PACKARD BELL. And my computer
is involved in the CLASS ACTION SUIT concernig REBUILT Parts.
I think Packard Bells Address is bell@prodigy.com
The people who don't like Packard Bell are those Service Techs who just
pull card to repair computers. They don't know how to check the Boards ,
So they like the computers that have all those Slots. And if they cannot
fix the problem by pulling Cards then they replace the MOTHER BOARD.
Instead of replacing the Just the SMALL COMPONENT that is BAD.

Propagation Forecast Bulletin 51 ARLP051
From Tad Cook, KT7H
Seattle, WA December 8, 1995
To all radio amateurs

SB PROP ARL ARLP051
ARLP051 Propagation de KT7H

Solar activity was up very slightly last week when compared to the
week previous. Solar flux below the average for the previous 90
days on every day through the week. Geomagnetic conditions have
been stable, with the December 4 the most active day. K indices
were as high as five and the A index was 16. Otherwise most days
have had K indices of zero and one.

Conditions are expected to remain about the same, with solar flux in
the low seventies and low geomagnetic activity. A recurring coronal
hole is expected to cause a mild upset around December 26 and again
around December 31, but the A index is expected to remain below 20
on both days.

Next week will be the last propagation bulletin for the year,
because the author will be vacationing in Brazil until January 3.

Sunspot Numbers for November 30 through December 6 were 17, 16, 16,
23, 22, 22 and 15, with a mean of 18.7. 10.7 cm flux was 74.3,
72.7, 73.3, 73.3, 72.8, 73.6 and 74, with a mean of 73.4.

From ARRL Headquarters
Newington CT December 8, 1995
To all radio amateurs

SB QST ARL ARLB110
ARLB110 Nominations Open

Nominations for the ARRL Instructor of the Year awards are due to ARRL Section Managers by January 31, 1996.

Each year, the ARRL Board of Directors selects recipients for each of four award categories. The ARRL Herb S. Brier Instructor of the Year Award is presented to a nonpaid volunteer instructor. The Herb S. Brier award is co-sponsored by the Lake County, Indiana, Amateur Radio Club. The ARRL Professional Instructor of the Year Award is presented to a paid, professional teacher. The ARRL Professional Educator of the Year Award is presented to a paid, but not certified, instructor. The ARRL Excellence in Recruiting Award is presented to someone who recruits more than teaches.

Section Managers forward nominations to the Educational Activities Department at ARRL, and EAD will send details to nominees about how to compete for the awards. See QST for your Section Manager's name and address.

it's very regulated

>and b. can bend over the horizon.

true, but due to multi path propagation your maximum baud rate is pretty low
unless you are frequency agile and operating close to the MUF. 1200bd is about it.

VHF through microwave is needed for this sort of data rate, 56kb modems are
available for this for about $300 (I think)

>
>Does anyone know how possible, leagal and/or expencive is this project?

Well everyone wants one of these. They are starting to be off the shelf but
they're expensive in the kilo$ region I think. There's things like
personal computer communicators which send RF around a building at about
900MHz and if you put an antenna on them they go for about 2 miles.
I understand that companies have developed stuff at about 2-5GHz to do the same
thing. I'm hoping that ham packet will all go over to this sort of stuff
so we can have ethernet data rates on 10GHz.

Michael P. Deignan (kd1hz@anomaly.ideamation.com) wrote:
: Entice them? Wasn't that the argument for no-code VHF. "Get them
: interested in the hobby. And then they'll upgrade." Yeah. If some
: posted statistics are correct, they aren't. Rather than work for the
: upgrade, they just whine about it until they get no-code HF. Hell,
: after all, it worked for VHF no-code.

i dunno. i started out no-code and worked for the upgrade, even though i never use anything other than 2 meters, but i don't know what everyone's getting all bent out of shape about. it's a hobby, it's not the distilled essence of life itself. you have fun spending the 3 weeks or whatever it takes to learn the code, or you don't. it shouldn't be a terribly big deal. although, as i've said, i don't use code, i am somewhat partial to it's use as a 'dedication filter', sort of like joining a fraternity -- in order to get in the secret club, you have to do something mildly unplesant. it's strange that this debade seems so intense here on the net, but in rl, i hardly ever hear it come up. almost every single ham i have ever met in person has had not a bad word to say about anything -- they just seem so plesant (maybe i live near the charmed repeater?) but here, i hear ascii shouting, bickering, name calling and ranting and i still really haven't figured out what the big deal is.

i would hope that we could all be mature, mildly plesant individuals in rl and here on the net....

: It's funny, it doesn't get any truer no matter how many times you assert it.
: How is the Amateur Radio Service racist? Does the FCC prohibit licenses to
: people of certain races?

i think his point is correct, but his wording is misleading. i don't
think he meant to say that ham radio itself is racist (which obviously it
isn't, it's an abstract 'thing', it can't have an oppinion one way or the
other) but i would agree that there are probably more members of this
particular hobby who have racial bias' than in some other hobbies. you
never see debates about race on rec.food.veg ... i'm sure if you took a
poll among ham radio operators that we would come down decidedly far to
the right of a random sample of mainstream america on issues of
affirmative acction, gun-control, abortion, etc. it's just the makeup of
our members, it's (as you said) not the hobby itself.

now certianly i am in no way implying that all hams are right-of-center,
or racially biased, or gun collectors, or homophobic or whatever, so please
don't flame me
by saying 'why, i'm a tree hugging enviornmentalist feminist who voted
agrarian for the past 20 years an dont eat meat, how dare you suggest i'm
a racist' cause that's not what i said. ah, i probably will get flamed
for this anyway -- if you must, you must. sorry to be a thorn.

Hi everyone, the manager of the Radio Shack service center in
this area (Salt Lake County, Utah) just told me that she will
not do anything to fix my new radio which always receives a
noise signal on 146.76MHz -- that is, is has a "birdie" there.
Does anyone else have experiences dealing with Radio Shack to
try and fix such a problem?

You should contact the nearest Radio Shack regional office and speak
with the regional manager. If the radio is new, as in less than 30 days
old, then under Radio Shack's policy the manager should at least take it
back, and certainly repair it. I believe the R.S. hand helds have a
problem with noise emanating from the keypad, but I thought that was
fixed in the later runs.

The regional office call should do the trick, if not, phone Tandy Corp.
in Ft. Worth, 817-390-3011.

3442. Re: Serial-to-Parallel Converter

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-09 00:00:00 UTC
From: jlundgre@delta1.deltanet.com
Message-ID: <4ad2m2$qf6@news2.deltanet.com>
Source record: 234193
Cross-posted to: de.comm.ham,rec.radio.amateur.digital.misc,rec.radio.amateur.homebrew,rec.radio.amateur.misc,sci.electronics

Brian Webb (102670.1206@CompuServe.COM) penned:
: I'm trying to find either an IC or a schematic for converting
: serial-parallel.

: I own a solid state radioteletype decoder (circa 1980) designed
: to work with serial printers. However, my printer, like virtually
: all others is parallel.

: Regards,
: Brian Webb, KD6NRP

Most printers around that time were serial. There are still many old
printers that are serial. And believe it or not, most of the printers
made today are serial.

Well that's a bit of a fib. Most of the printers, like LaserJets and
DeskJets, have both serial and parallel ports. And you could use either
one on the newer models. They switch automatically between the two ports.

The computer stores like Fry's and MicroCenter sell a serial to parallel
box for around $40 US. You can often pick up a cheap buffer box that
will do the same for a few dollars at a swap meet.

You should check to make sure that the box you get can be set to the correct
baud rate. Some of the older stuff may run at very low baud rates, and
most stuff today runs at 1200 bps or faster.

3443. Looking for documentation

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-09 00:00:00 UTC
From: roll@Bucklan.Stupi.SE
Message-ID: <4acfm7$2s5@Bucklan.Stupi.SE>
Source record: 234194
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I have got a broken linear amplifier. In it's previous life it where located in the attic, close to the antenna and served it's masters well until the roof broke and rain water dripped into the operating amplifier.

Mixing rain water, 2.5KV, HF and TTL-circuitry turned out to be fatal...

It's manufactured by "Advanced Radio Devices" that used to be in Sterling VA, USA, apparently they are out of business since several years now. The model number is 230C

I have a manual, but for some reason they decided to not include all circuitry that has to do with communications between the actual amplifier and the remote control box (wich has a Z-80 microprocessor).

I'm trying to find the missing documentation of the hardware, and some insight to how the program actually works, so I can diagnose the IO-circuitry. If the SW has any diagnostic/production testing routines that could be handy etc.

If I manage to get this working I assume that all of it including the tuning presets has to recalibrated, but how?

Any information or leed to anyone who might know, would be most appreciated. (as a private email or call)

Hello Gang,

I've got some Key restorations going and need a few parts to finish up.

1. Bunnell Gold Bug -- need the circuit closing lever and mounting hardware.
2. Signal Electric Semantic -- need the pendulum stop post.
3. Electro Bug -- need weights. need one thumbscrew and jam nut.
4. Levinson Radio "Like-A-Flash" -- need finger pieces, binding posts.
5. Logan SPEED-X -- need finger pieces
6. Clapp-Eastham key -- need binding posts

Would buy parts off your junkers or buy your junkers for the parts.

Yeah, but ya know Scott...by the way you sound I bet ya in a couple
years you'll be proficient with CW even though you might not
routinely use it..it's your attitude and feeling for the standards of
amateur radio that will both make you and ham radio successful, and
not parallel to CB. Once you get your first ticket I think, based on
your comments, you will want to go on..you seem to have respect
for the institution, not just the "ultra liberal" mindset that the
world is my welfare check...

I don't think that a two year limited license is an unreasonable amount of
time to at learn the theory for a Tech. I am surprised you did not get the
time to operate since that was the first thing I did when I got my ticket. Of
sourse, when you got your it may have been the 1 year Novice (which is a short
time). However, I was in college at the time that I got my Tech so I had
little also to study..but I did!

>)

>life (without retaking the tests) is more likely to retain folks in the
>hobby.

I don't think that is true. You know before getting the license that it is not renewable..if this is a turn-off then go for the Tech. At the time that I took the Tech exam , the code was the same as for the Novice, but more theory was required. As already expressed by other, the harm of a large number of people at the entry level (if we continue with a renewalbe Novice this would be the entry level) degrades the amount of tchnical knowledge that amateur radio might have and interfer with Basis and purpose (97.1) of amateur radio.

The idea for the non-renewable Novice (that I agreed with even when I was a Novice) was to spur the continuation and extension (one of the purposes in part 97.1) of the amateur radio operator. I am not sure if I would have upgraded without the idea of losing my "ticket".

This is NOT to say that people at the Novice level do not understand the technical side of amateur radio, but rather we may need to restructure the examinations so that these people with all the technical knowledge can advance to a higher level of license.

: Don't bother building one when you can buy one - about $90 from
: Global Computer Supplies 800-845-6225.

: Of course, a used serial printer at a hamfest would be cheaper than that.

: Don N2IRZ

You can obtain a bidirectional interface converter from Lyben Computer Systems (Sterling Hgts MI) for ca. $50. I use one to drive a parallel printer with a Mac. A warning, however: the units are Class A, and emit RFI. I discovered this by finding a steady signal on a local packet frequency, so I got in my car and started a fox-hunt. Guess where it led me....back to my house. It can be detected by my mobile 2-m rig from a couple of hundred yards away. I have not yet succeeded in cleaning it up fully - but just don't leave it on all the time as I used to.

3455. This Week in Amateur Radio #141 (for air through 12/15/95)

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-09 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <xREFUdG.sanderman@delphi.com>
Source record: 234206

Here is a summary of news items covered on edition #141 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 15-Dec:
-
1. New Vanity Call Sign Form Released by FCC, Available from ARRL
2. ARRL Opens Nominations for Some of its Most Prestigious Awards
3. FCC's New Interference Handbook Becomes Available on the WWW
4. ARRL Appoints Boston Area DXCC Field Representative
5. AMSAT-UK Receives Donation for Phase 3D Satellite
6. Houston AMSAT Net, Like TWIAR, Unavailable by Satellite
7. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
8. "The RAIN Dial-up" from Chicago
9. Weekly Propagation Forecast with George Bowen, N2LQS
10. FCC Approves Advanced TV (formerly HDTV) Standard
11. Upcoming Special Event Stations
12. Leap-Second to Be Added New Year's Eve, The Longest Minute
13. "Amateur Radio Newsline" - Edition #956 from Los Angeles
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard each Saturday at 8:00 PM (EST) and carried on VHF/UHF
repeaters throughout North America and on 160 meters at 1860 kHz.
Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
Here in the Capital District, "This Week in Amateur Radio" is heard
on our "flagship" repeater, WA2OQE/R in Troy, on 145.33 MHz,
courtesy of the Niagara-Mohawk Amateur Radio Club. The program is
repeated Mondays at 8:00 PM.
-
Due to the loss of satellite facilities, the service is being
carried exclusively on 160 meters and on the local 145.33 repeater.
The "Tech Talk Network" expects to complete negotiations with a new
satellite uplink carrier by the beginning of January. "This Week
in Amateur Radio" will return at that time. Details will be posted
as conditions warrant. All affiliates are requested to contact the
producers for further information.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (e-mail kxkvi@delphi.com) or Stephan Anderman, WA3RKB,
at 518/664-6809 (e-mail sanderman@delphi.com). You may also reach

them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

>still I couldn t figure out what "HAM" means.

As I hear tell, in the early days of commercial radio, the "commercial" ops would sometimes lament interference from "amateur" operators by saying, "there goes those hams again... hamming it up on the radio" or the like. Of course, back then it was pretty much no holds barred.

This is just one theory, of course. But when you find out what HAM means, then look into Woof Hong (sorry for spelling folks). HI.

To: WA4D WHATLEY, MICHAEL E LIC ISU 24-AUG-1995
EXTRA 5844 DORIS DR LIC EXP 24-AUG-2005
DOB 14-SEP-1950 ALEXANDRIA VA 22311 LST UPD 24-AUG-1995

Well Mike, after looking you up in the callsign database I found that you just got your Extra. Good for you Mike. I now realize that you definitely are a superior human being to us no-coders

Actually I'm quite glad you pointed this out for me (and based on one email at that) I really wasn't aware how lethargic, lazy, complacent, and tired I have been, Wow! What a revelation! I should have been talking to you all along. Your uncanny ability to know everything about someone based on an email is incredible. Are you the Messiah?

It must be the personal attributes which you have so astutely recongnized in me that have caused me to earn a BSEE and an MSCE, FORCED me bring home a six figure income for the last 10 years, become marketing manager for a $16billion company, earn a

commericial/instrument pilots license, own a half million dollar home, a BMW, an airplane, raise a child, be scoutmaster for the last 5 years, do volunteer work for the local schools, race off-road vehicles semi-pro, etc.

It's that "code" thing. Yes, that must be it! I could never understand why I couldn't do better. It's been holding me back all this time. Learning Morse code, why didn't I ever think of that? The solution to becoming a fully actualized human being - it's been at my finger tips all along. I'm heartbroken now that youv'e pointed this out to me and now I must figure out how to turn my life around. Maybe the "code" will help. It seems as though "code" may be more important that God? Especially since it is recommended by one with so much knowledge and experience. Instead of going to church on Sundays I'll learn "code" - yes that's it!

From your vantage point as a programmer of medical machinery and as someone who has achieved the state of "code" as well as having contributed so much to the world by learning Morse Code and evanglizing it's use, maybe you can help me turn my life around. Do you have any code practice software?

You guys were lucky you didn't a problem. I worked for a company who
had 4 PB, 2 AST, and a HP. All DX2-66.
ALL 4 of the PB died for various reasons, and when the on-site repair
people showed up, it reminded me of an appliance repairman.
"Whatcha got here is a bad board." after replacement it still
didn't work, then he said "that bad board musta shorted out the
hard drive." - etc, etc... we ended up getting another AST - we had
no problems with them.

- you get what you pay for -

KB5VQI
Glenn

BTW - I own an AST at home which runs 24hrs / 7days for my packet rig,
with no downtime.

Jim,
TNX for the info. I am getting set up on the VHF/UHF bands again for terrestrial work. I understand that there has been some "bad blood"between some of the old Satellite DX bunch and the
"newer"DXer's. It is a pity, but it looks like Satellite DX is starting to become like 20m DX!!!
Oh well, it was grate in the ï¿½arly days" hi hi. I will look for you on the next AU opening - I
should be QRV on 2m and 222 MHz by the end of the month and on 6m, 70cm and 1.2 GHZ by early
spring. I have all of the equipment and antennas, I just need to set it all up and get the antennas for 6, 70 and 1.2 on the tower. Not a good idea right now as we have been getting a lot
of snow up here. It is going to be a rough winter. CUL and keep in touch

There are two big clubs in Austin, Austin Repeater Organization
and Austin Amateur Radio Club. ARO meets on the first Tuesday of
each month at Lubys Cafeteria on North Loop at 7:30 PM. AARC meets
on the second Tuesday, also at Lubys at 7:30.

Both clubs can be reached at
AARC
P.O.B. 13473
Austin, TX
78711-3473

I hope this helps.

Has anyone actually seen a Heath catalog in the last year, seen an advert, etc.? They were selling consumer electronics stuffs last time I got a catalog, but I recently went looking for them on Compuserve, where they had a service, and they were gone. I thought about it and I haven't seen a catalog either. I am looking at weather monitoring gear, and they had some in the last catalog I saw (even some kits were left of these) but nothing recently.

does anyone have an 800 number or other info?

On: 7 Dec 1995 22:51:12 GMT amoeba@winternet.com (Who wants to know?) wrote:

What is going on these days with license classes? I have been out of the hobby for 2 years and I see alot has changed.

I was originaly licensed as a novice back in 1990 after passing the written and a 5WPM code test. 2 months later I upgraded to Tech.

Now, when I am on the air and someone asks what my class is they laugh at me because they think I am a Tech Plus. I really think the FCC should have named it differently (maybe newbie or neophyte). Then when I talk to some folks, I get the feeling that Tech Plus is superior to Tech. Folks telling me to upgrade from Tech to Tech Plus. WTFO?!

What is the deal and why am I asking and not just upgrading to general?

John,

Shortly before you were licensed (the database shows your upgrade in 1992), the Tech class license was changed. The current Tech license requires passing the Novice and Tech written elements and no code test. The license has all amateur privileges above 30 MHz. Passing the 5wpm code test adds HF privileges of the old Tech class. The Tech class with the code test is now officially called "Tech Plus" Yes, Tech Plus is "better" than Tech. Since you passed the code test when you were licensed, you are indeed a "Tech Plus." You should have been told to retain your certificate showing you passed the code test. The first "Tech Plus" licenses issued did not have "Tech Plus" printed on them, the FCC database was not setup for it.

)
)No, I would NOT say that this person could ever try again. However, I would
)let a certain time peroid pass (say 6 months) before they could try
)again. When I got my ticket, there was a two year Novice license.
)It was not renewable and prompted me to upgrade. Think of the entry
)level license as a demo of shareware software. You are free to try
)it out (with liminations) for a time peroid. after which the software
)can not longer be used. If you have the original copy backuped, you
)can always relaod it and start again. However, buying or upgrading
)gives you a permentant license.

When I got my novice ticket, it also expired quickly. Unlike you, I did not
get a chance to operate or upgrade at that time. Had the license not expired
I may well have gotten back into the hobby within a few years. As a result of
the expiration, it was 18 years before I got back into the hobby. It actually
was the no-code license that got me to go after my license again. I didn't
stop there, but I have no problem with folks who do.

)>Further, what harm is there in someone staying at the entry level
)>indefinitely? Formal training organizations (the military, universities,
)>etc.) have time limits because somebody "in the system" is consuming scarce
)>resources merely by being there -- somebody not making sufficient progress
)>is taking a slot that could be allocated to somebody else. Who, other than
)>the person involved, is hurt by somebody staying at the entry level for a
)>while? Who, other than the person involved, has all the information to make
)>the tradeoffs between time spent on what, after all, is a hobby and time
)>spent on the rest of their life?
)
)I see nothing wrong with staying at an entry level license (I have been a
)Tech. for the past 20 years!). However, I think that there should be a
)license in with people can see what amateur radio is about, and decide if they

)wish to stay with it or not. If they wish to stay with amateur radio, then
)more should be expected of them (so that the "mission" of amateur radio can be
)carried out).

Having a required period can be a substantial turn-off, especially for a
youngster. This was the case for me. I don't see a compelling argument for
the damage done by leaving these licenses valid. Allowing a person to go
get involved with other activities and then coming back to radio later in
life (without retaking the tests) is more likely to retain folks in the
hobby.

3472. Old style Yaesu mic connectors now available again

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-09 00:00:00 UTC
From: rs@ham.island.net
Message-ID: <120995165455Rnf0.79b6@ham.island.net>
Source record: 234223
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Some time ago, someone posted looking for mic connectors to fit on the old style Yaesu FT-207R handhelds. These are a six pin audio connector, and I think were also used by Wilson, though I never had one of those.

I was browsing through a catalog I picked up recently in Vancouver, BC at RP Electronics, and lo and behold, there they were.

The part number is 359-100 for the mic cord plug, and 359-105 for the matching chassis mount jack. (The female end)

Prices were listed as $12.95 Canadian for the 359-100s, in quantities of 1-9, and $9.95 for the 359-105s in the same quantities.

RP is at 2113 West 4th Ave, Vancouver, BC, V6K 1N7, their phone number is (604) 738-6722, Fax (604) 738-3002.

I have no connection with RP whatever, but if some of you are still looking for these connectors, I suggest you give them a call.

>This strikes me as setting up difficult barriers to keep people out of
>the hobby, as if the level of your license indicates your overall worth.

Difficult--no. Meaningful--yes. Let's face it, a test *is* a barrier
of sorts. To get past it one has to pass the test. I advocate a test
which measures knowledge of the subject matter, not the short term
memory of the test taker.

The level of license is a statement of one's overall commitment to
radio science, much as the level of one's education. My Extra call is
the result of a commitment to advance myself, and in the days before
Dick Bash and the later FCC cookie-cutter testing I bore my call as
proud testament of my commitment to and achievement in the hobby.

>The entry level exams should be accessible, even if this means some
>people memorize things. More people in the hobby makes a stronger
>economic and political base. Another intent is to encourage people to
>learn, and a lot of us would like to do that by tinkering - it's a
>strong motivator.

Accessible doesn't mean trivial. The novice exam is a cursory and
trivial probe into one's knowledge about the amateur radio service.
If a person passes the exam on the basis of knowing the
material--fine--but with a published question bank one can pass it my
memorizing answers with no idea of the knowledge which underlies the
answer. Regurgitating answers on cue is the trivial act of rote

memorization.

>As for DSP, etc. the question is open as to what is "essential". I can't
>derive the equations used to calculate positions using GPS signals, but
>what does that matter if I'm trying to figure out where in Baja I am? I
>understand Boolean logic but I can't create an ASIC in silicon - does
>that mean I should not use the parts?

Nobody's asking for a comprehensive engineering-level exam here. But
if you can't explain how DSP works, how an A-D or D-A converter
operates, or the basic use of an FFT, you shouldn't have an Advanced
or Extra class ticket on the wall, as you've little depth and currency
in your knowledge of the science of radio.

>I've only been licensed a few months, but I've already learned more

>never go beyond Technician, because I don't want to learn code, but if I
>need to learn it to do something I want to do, I will. And I imaging
>there are a lot of others who have a similar outlook.

Good. And there's no shame in a tech class license. But I reel in
agony when I hear a ham with a group A or B call sign who doesn't know
the first thing about grounding his station, or why turning his speech
processor on with the mike gain all the way up splatters up and down
the band, or how he got in a legal battle with his neighbors over TVI
because he didn't have the common sense to put a low-pass filter in
the line. Nobody should be able to get a license to operate the
equipment without really demonstrating they have some idea of what
they're doing. And the higher the class, the more you oughtta have to
demonstrate...

Sorry to see it didn't help your ability with spelling words in the
english language. Although to be fair, your spelling of college might
be a typo.

> at, and probably still carrying that 15 year old hand held with you,
Accually I think it's older than that, but what the heck it works well.
I did get a new one though, and the old one is just sitting around the
house. I'll probably sell it some day or give it to a new deserving
ham.

> looking like a geek!
Oh come now Jeff, considering that I'm riding around on $10,500.00
worth of steel, plastic, rubber, and nylon I don't think that carrying
a radio around with me is likely to change how people really view me,
do you?

> aa7up
This is just a rumor, but I heard through third party sources lately
that you lost your license. I won't get into the details because I
don't know all the players, but if it's true I'm sorry it took so
long to happen.

Please feel free to correct me on this if I'm wrong, I really don't
like being misled by anyone.

Dont know exactly where you are going in Carribean but here goes:

1) Suriname forbids radio communication with amateurs and is listed in the
forbidden country list by the I.T.U., not likely you will be close unless
you go to Trinidad and Tobago, Grenada or Barbados, however, Canadians are
allowed to operate temporarily from Suriname. Not sure about USA.

2) Can't answer for USA but Canadians are allowed to operate temporarily
from: Antigua and Barbuda, Bahamas, Bermuda, Dominican Republic, Costa
Rica, Dominica, Grenada, Guatemala, Haiti, Honduras, Jamaica, Mexico,
Nicaragua, Panama, Saint Lucia, Suriname, Trinidad & Tobago, & Venezuela.

I doubt that the American list would be much different but someone can
tell us for certain now that I got the ball rolling.

I absolutelly concur. Both comments are very well stated. The "code" may well be an obsolete form of communication but it is an obstacle that someone will happily leap if they want the license bad enough. Those who want it badly enough usually bring something with them to the hobby and make it a better fraternity. I don't intend to categorize all non-code hams. The old addage "you get what you pay for" has never been more applicable than it is today. When you work for something, you appreciate it more and you project your "pride in belonging". People having that pride will contribute to the hobby and make it better for all of us and more attractive to those would-be hams preparing to make the plunge.

I talked with a HAM who actually talked to Joe Walsh in CW.
Found out later who it was. He was excited.

HAHAHAHA. Sorry. Mike may have just renewed his license, but certainly he
didn't just upgrade to extra. Not with a 2x1 call (especially not in
4-land).

Not to defend Mike, but you shouldn't work with faulty premises.

> Enough for now. --... ...--

Amen to both of these ideas. After 23 years of hamming, CW is still a
blast. sure its nice to have a laid-back QSO on SSB or FM, but ;lTtheres
just a lot more fun and challenge pulling a CW contact out of a mess of
QRM. Not only that, but when I got my first license, it was easy fotr
the average youngster with a papreboy income to get started in ham
radio. My first shack only cost me $100. Try to get started that cheap

in any other mode!!! These days, the cheapest entry seems to be via 2 meter FM with an HT. Nothing against 2 meters, but hey...ya can't work any DX. You can't talk to any one half way across the country. For me that's a big part of the enjoyment of Ham Radio. 2 meters is great for getting to know all the local hams, though.

73 to all,
Crafty, WA3SLE.

There is also the Williamson County Amateur Radio Club located in
Georgetown, TX, just north of Austin. They meet on the 1st Thursday of
every month at 7:30 pm at the Georgetown ISD Adm. Building. For more information,
write me or PO Box 1644, Georgetown, TX 78627. We have over a 100 members
and growing. Club activities include a swap every year in February, club
barbeque's, club repeater and good speakers at most every club meeting.
Join us some time!

>LE> It's not a big thing, I know but it really got to me.

I'm just curious, but could all this bad service be coming from a
particular salesperson at Austin?

I've never had any business with these people, but has anyone sent the
management complaints? Do they have a web site that can receive
feedback? Do they know this thread is even going on? Maybe someone
should collect all this info and send it to the management as it's
posted (with authors permission) or at the end of the month..
The management could be clueless about what is going on..

I have to agree, 75 meters has degraded considerably in the past few years to the point where its embarrasing to admit its a ham band at all. Many evenings I hear a bunch of guys hopping around the frequencies and intentionally interfering with other stations and not identifying themselves by callsign at anytime. Their interference is malicious and insulting and includes alot of off color comments, language, sounds and music. It is a complete lack of respect for fellow hams and for the FCC regulations and nothing seems to be done about it ever! They seem to act as though they own 75 meters and will drive everyone else off the band.

I suspect these guys are running the legal limit, or even over as their signals are quite loud. Judging by their accents and general comments about the weather, regional events, or places, I suspect they all come from one region of the United States.

QSL COLLECTION

Hi,
response to our list #2 of US Counties missing in our collection doubled:
2 (*two!!!*) hams gave us a shout. Isn't that encouraging?
So here we go again:
QSL COLLECTION, an international foundation based in Vienna, Austria, host
world's largest collection of QSL cards for research, publications,
exhibitions etc. There are many gaps in the US COUNTIES file, so we ask
everyone who has (a) spare one/s to offer (or happens to live in one of
these counties) to send this card/these cards to
QSL COLLECTION, POB 2, A-1112 Vienna, Austria-Europe.
If you'd like to learn more about our activities, let me know.
Tnx, 73 de Wolf

You can work DX with 2m. I've worked stations 200 miles away during
"tropo" conditions. Does not happen often, but can be interesting.

Have heard of 2m tropo reaching across the country.

Hi there.

I've just bought a Kyodo KG109 PMR programmed for 70cms and I wonder
if anyone out there has any useable info on this excellent radio?
I think the UK sales people are Key Comms somewhere down south,
can anyone confirm this? If so then their address would be helpfull.
The other main details I'm after is a Circuit Diagram, a pinout for
the speaker/mike connector and programming details for the EPROM.

Many thanks for reading this msg and in advance for any replies.

73's & 88's Roy (G7KGT) [rst@roogna.demon.co.uk]

Try the ARRL BBS and download LOG405.ZIP. Excellent software for the price since it is a full shareware version rather than the demo that most individuals post. Includes full documentation but you will need a viewer or Microsoft word to review. I tried it during the CW SS but found I had severe monitor emissions that forced me to go back to hand logging.

DX Bulletin No. 233
BID: $OPDX.233
December 11, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2DND, WB3JFS, K4UTE, K6OZL, DF4RD, CT1ENQ, F6AJA, JJ2QXI, NPDXG Bulletin, G4BUE & DX NEWS SHEET, DL9GOA & DXNL and VK5IE the following DX information.

ANTARCTICA STATIONS..... Palmer Station, KC4AAC, operator Mark makes phone patches and operates every Thursday night anytime after 0000z. He is more than willing to hand out QSOs between phone patches and after he has completed them all.
MAWSON BASE. It has been reported that Graeme Currie, VK0GC, will be stationed here for the season. No QSNs have been reported on the Ohio/Penn Cluster Network as of yet.
EM1KA is active from the Ukrainian research base Vernadsky around 14195 or 14265 kHz after 0300z. This station has also been heard on 1832 kHz around 0350z.

5N, NIGERIA. 5N0OBA, 5N0PYL, 5N0T, 5N3ALE, 5N9WKO will use 5N4OTB call sign from Bonny Island (which may count for a new IOTA) from December 23-28th. They will be active on all bands SSB and CW. QSL via F2YT.

KH2, GUAM. Ray, WH6ASW, who works as a teacher on Guam and will be there for the next two years. Begin looking for him on the bands as WH6ASW/KH2 very soon. QSL via G3EZZ.

KH9, WAKE ISLAND. The Dateline DX Association is pleased to announce its plans to activate Wake Island January 24-31st (1996). This will be a one week operation by 4 experienced operators with the intention of taking KH9 off the DX Bulletin's most needed 100 list and satisfying the large European demand. The callsign to be used will be announced shortly before commencing operations to minimize pirate activity. Operators that were announced are: AL7EL, WB2DND, KC7V and K4HQI. Activity will be on all bands including the WARC bands. There will be a major emphasis on RTTY and satellite, as these modes have never been activated from Wake.
QSL via AL7EL, Tom Harrell, 27257 Nellis Road, Evans Mills, NY 13637

OX, GREENLAND. The DXNS report that OX3XR tries to be active every Wednesday on 1825 kHz between 2200 and 2300z. Also, check 3503 kHz around 1030z. QSL via OZ3PZ.

SPECIAL EVENT STATION. On December 15th, a second submarine, "the FARNCOMBE", will be launched in Adelaide, South Australia and as such the Port Adelaide Radio Club will be operating under the call sign of VI5SUB to commemorate this event. VI5SUB will be active on December 15 and 16 from 0130z and will operate on the following suggested frequencies: 21200, 14200, 7100 and 3600 kHz +/- QRM and depending on propagation.

SPECIAL PREFIX. Austrian stations during 1996, will be allowed to use the special prefix "OEM" (on a voluntary basis) to celebrate their 1000th anniversary.

SEND YOUR QSLS TO..... The PVRC was active as K3VOA from the Voice of America HQ during the ARRL 10 Meter Contest. QSL via K3IXD..... Pete, AH3C, who was active from Cyprus as C4A in the CQ CW Contest, reports his new mail address as follows: Pete Grillo, AH3C, 2150 E. 6200 South, Salt Lake City, UT 84121..... Steve, KU9C, is now the new QSL Manager for for Leonce, FM5DN.....

VP5, TURKS & CAICOS. Koji, JJ2QEH, and Mack, JJ2QXI, will be active from February 3-9th at VP5JM's rental shack. QSL JJ2QEH to Koji Iida, 1866-2, Oota, Minokamo, Gifu 505 Japan. QSL JJ2QXI, Masahiro Mori, 1268, Atobe, Mugegawa, Mugi, Gifu 501-26 Japan.

VP8, SOUTH GEORGIA ISLAND. The NPDXG reports that VP8CGE and VP8CID will return soon to this island.

XQ0, EASTER ISLAND. The DX News Letter reports JA7AYE and JA7XQV, who were recently active from Paraguay, will make a stopover on Easter Island on their way home back to Japan. They will be active mainly on CW as XQ0/JA7AYE between December 30th and January 3rd (1996). QSL via JA7AYE.

YA, AFGHANISTAN (UPDATE). Dick, K4UTE, talked with Yan, F5TCN, who is the QSL Manager for YA9XL, and Yan states that at this time he has no logs but will let Dick know when he receives them. The operator of YA9XL is Oleg, UT9XL, and he is in Kabul. Oleg appears to like 7005 kHz around 0100z and has been heard on 20 meters CW bewteen 1400 and 1500z. Yan gives the following address to QSL which in not the one in 1996 callbook: Yannick Chilliau, 14 Route d'Harnes, F-62880 Annan sous lens, France.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to one of the three following addresses: kb8nw@barf80.nshore.org / aq474@cleveland.freenet.edu / DFJH48A@prodigy.com
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should

be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

3498. Re: HF rig has 800hz offset for CW?

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-10 00:00:00 UTC
From: rdavis@nyx10.cs.du.edu
Message-ID: <4afsf0$rpu@nyx10.cs.du.edu>
Source record: 234113

charles1@netcom.com (charles copeland) writes:

>My TS820 manual states that the CW transmit is 800hz offset
>to the receive. Why do they do that?

>Assuming two CW operators have this same radio, how is it corrected?
>(I know about the RIT control. How is situation corrected without RIT)

>example:

> OPERATOR #1 OPERATOR #2

> <-- TX 7101.6
> TX 7100.8 --> <-- RX 7100.8
> RX 7100.0 -->

Well, yes, but that is not how it works.
OP 1 OP 2

TX 7100.8 7100.8 TX
RX 7100.8 7100.8 RX
It is not that the receiver is tuned to a different frequency.
It is that the beat frequency oscillator is offset from the
receive frequency so that there will be a difference (800 hz)
so a tone will appear in the audio output.
Early SSB transceivers did not have the offset (Collins KWM-2)
Swan 350 come to mind) and the operators would hopscotch
across the band as they changed frequency to hear the CW tone.
Without use of the RIT, the transmitter and receiver are
(well, should be) tuned to exactly the same frequency.
Without the offset, you hear zero beat from the audio output
until you tune the radio off the other station's frequency.
But then, the other station no longer hears your signal,
assuming you both listen to the same side of the CW signal.
So the radio has the BFO offset. More modern radios have a
variable offset to accomodate CW ops who want to listen to 400 hz, or
900 hz or whatever.

3499. Alaskan Time Zones (Query)

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-10 00:00:00 UTC
From: bdillon@admin.aurora.edu
Message-ID: <Pine.ULT.3.91.951210230028.10548D-100000@admin.aurora.edu>
Source record: 234114

I guess this group is the most logical of the news groups I follow to ask this. I've found some contradictory information in various sources I have for Alaskan time zones. The 1979 Time/Life Almanac indicates Juneau standard time is 8 hours behind UTC, and Anchorage is 10, whereas the 1994 Aircraft Owners and Pilots Association manual says all of Alaska is 9 hours behind UTC. I do seem to remember setting my watch back on a 1989 Alaskan cruise to S.E. Alaska. Is all of Alaska (except for the Aleutians) on the same time? Is that a change from the 1970s? Just curious. Perhaps e-mail responses would save bandwidth (I'm probably the only yokel that's curious).

Thanks,

Bob WB9LTN <bdillon@admin.aurora.edu>

[Then proceeds to insert his foot in his mouth by commenting on how
Mike "just got" his Extra]

Welp, yet another newbie shows his ignorance, and a total lack of
understanding how callsign servers work on the Internet.

Is this typical of the deductive reasoning we can expect to get from
all those "fantastic people" just waiting to get into the hobby with
the no-clue... err, no-code license?

[personal net worth / asset sheet deleted]

Wow. I'm impressed. You're right. You're a "real" ham. I genuflect in
your general direction.

The following is a QST

WRC '95 ends, but the high frequency no-code issue refuses to die.

It will be revisited in 1999. This story and more on Newsline report
number 956 coming your way right now!

(*****
WRC ENDS

The 1995 World Radiocommunication Conference is over and it's good
news for those hams in favor of keeping the Morse Code. While the
Geneva ITU conference dealt with a number of proposals to simplify the

Radio Regulations and to expand mobile-satellite services, the most controversial matter raised amateur radio wise was a New Zealand proposal to delete International Telecommunication Union Radio Regulation 2735. This is the requirement that amateurs demonstrate Morse code ability in order to be licensed to operate below 30 MHz. The Conference did not accept this proposal. Instead it agreed to include consideration of the amateur regulations on the provisional agenda for the 1999 WRC. The broad language of the agenda item should also allow for consideration of any changes that might be necessary to achieve global recognition of an International Amateur Radio Permit. Another preliminary agenda item for WRC '99 deals with the possibility of increasing the available spectrum for broadcasting, particularly between approximately 4 and 10 MHz. This raises concerns not only with regard to the 40 meter amateur band, but also for the top end of the 75 meter band, which is already allocated to broadcasting in ITU Regions 1 and 3.
Amateur Radio interests were represented at the conference by International Amateur Radio Union President Dick Baldwin, W1RU, secretary Larry Price, W4RA, and Region 1 vice chairman Wojciech Nietyksza, SP5FM. ARRL Technical Relations Manager Paul Rinaldo, W4RI, was a member of the United States delegation, and other national delegations also had Amateur Radio representatives at the conference. It should be noted that no other United States group claiming to represent the interests of radio amateurs bothered to send a delegation to the WRC meeting.

(*****
NORTHWEST FLOODS

Ham radio operators have responded in the wake of severe flooding that hit the Northwestern U.S. over the past weeks.

Ten inches of rain in three days was too much for parts of Western Washington to handle. In the Cascade mountains, flooding problems grew worse when warm rains melted snowpacks. More than a dozen major rivers in western Washington reached or passed flood stage. That cut off roads to at least two communities and forced evacuations.
Radio amateurs were called to provide communications support at an emergency operations center set up in the town of Carnation. In Issaquah, amateur radio frequencies were used to help relay dispatch requests received by 911. In Carnation, hams helped dispatch fire/rescue units using fire department radio channels. Amateurs were also called to the King county police special operations unit. Hams provided communications support to a local search and rescue group. Amateur frequencies got a workout in King county. That's where many search and rescue volunteers are licensed hams. Amateur frequencies and repeaters are often used for primary communications during search and rescue operations in King county.
The flooding was even a problem for fish. At a salmon hatchery, water ran over a barrier used to keep salmon from swimming further upstream. The barrier itself was several feet underwater.

More on this story as details become available.

(*****
NEW WTB CHIEF NAMED

FCC chairman Reed Hundt has named Michelle Farquhar as the new chief
of the Wireless Telecommunications Bureau. Farquhar comes the post
from the National Telecommunications and Information Administration
where she served as Deputy Assistant Secretary of the organization.
For those not aware, the NTIA is the White House advisory group on
telecommunications policy. Farquhar replaces Regina M. Keeney who was
recently promoted to Chief of the FCC's Common Carrier Bureau.

(*****
SOME IDEAS BACKFIRE

Good ideas sometimes do backfire. The FCC Dallas Field Office tells
of an incident when it was called out on an unusual investigation
after a radio station staged a promotion to get more of its listeners
to visit the public library. The station told its audience that it
hid "a whole bunch of money" in books in the fiction section of the
central library.
Talk about greed and avarice. Shortly after this announcement, 300

to 800 people descended on the library looking for the money. 3,000
books were reportedly tossed on the floor. Some were damaged.
The Dallas Office investigated the incident, interviewed the station
and library personnel, and obtained a transcript of the program. The
station has since agreed to make a contribution to the library to
cover the damages. But here the kicker. The "whole bunch of money"
turned out to be a mere $100.

FUND ADMINISTRATORS REPORT

Yes, its only been two weeks, but Andy Jarema is back with the
October fund administrators report.

Right off the bat we want to say a huge thank you to the Alan County
Amateur Radio Technical Society of Fort Wayne, IN.
In the month of October we heard from the Rockland Repeater
Association of News City, New York, the Southwest Michigan Amateur
Radio Team of Calamazoo, the Triac Radio Club of Coatsville, PA, the
Metropolitian Amateur Radio Club of North Little Rock, AR, and Robert
Funk, KB5GQ of La Plas, LA.
From Califonia we heard from the Eldorado County Amateur Radio Club

in Plaserville, the Sonoma County Radio Amateurs in Santa Rosa, and
the Tri County Amateur Radio Association in Pomona.
On a personal note, a special thank you to my home club, the San

Gabriel Valley Radio Club W6QFK. Included with that was a great picture taken by Denny and Lulu Thatcher, W6VRK and N6VWF of yours truly working my own OSCAR station at our field day activities a couple of years ago. Thanks guys.
Remember the clubs who support us with the club name, repeater call

and service area get a mention during the newscast id break.

Listen for Andy's next report in about four weeks.

(*****
HPM AWARD

The ARRL Hiram Percy Maxim Award has gone to Beth Harris, KJ7FC, a 15 year old amateur extra class licensee in Cheyenne, Wyoming. Beth was first licensed as a novice in 1993 and advanced to extra class in little over a year. She is an active operator and a member of the SHY-WY Amateur Radio Club In Cheyenne.
KJ7FC is a sophomore at Cheyenne East High school. She is active in
several student organizations, including the amateur radio clubs. Beth has also been singing in choirs since she was five.
Beth Harris was nominated for the award by Paul M. Crips, KI7TS, a communication technology instructor at Carey Junior High School in Cheyenne. She was honored at a luncheon on November 15, attended by her parents, school officials, Rocky Mountain Division Director Marshall Quiat, AG0X and Wyoming Section Manager Rev Morton, WS7W.
The Hiram Percy Maxim Memorial Award recognizes outstanding under 21
licensed amateurs and includes a $1000. Nominations are made through ARRL section managers with a deadline of March 31 each year.

(*****
NEBRASKA 2 METER BEACON

Roger Cox, WB0GDF reports via the VHF Reflector that the WB0QIY 144

MHz beacon is back on the air. Roger says that WB0QIY turned it back on during the Thanksgiving Holiday. It was off for a month while the building which housed the beacon was being remodeled.
The WB0QIY beacon runs 70 watts into a big wheel omni-directional antenna at 40 feet near Grand Island, Nebraska. Its operating frequency is 144.295 MHz.

(*****
IEEE EVENT CANCELLED

A proposed reception and swapmeet for licensed amateurs at a professional conference in June 1996 has been canceled.According to the organizer, Jeffrey Pawlan, WA6KBL the events were to have been held during the IEEE Microwave Theory and Techniques Society's 1996 International Microwave Engineering Symposium in San Francisco.

(*****
ETO AND AST MERGE

From the business page, word of a merger between amplifier manufacturer Ehrhorn Technological Operations and Applied Science and Technology, Inc. Applied Science and Technology is located in Woburn, Massachusetts. It manufacturers systems for fabricating industrial diamonds and semiconductor materials. As most hams know, ETO was founded by Dick Ehrhorn, W4ETO. It manufacturers high power RF products, including ALPHA linear amplifiers for amateurs.
Erhorn who serves as the Chairman of ETO says that the merger will not affect his companys' position in the Amateur Radio market. He says that delivery commitments and warranty service for ALPHA Amateur Radio products are not affected and that ETO will continue to operate from its Colorado Springs location with no anticipated changes in personnel. Ray Heaton remains the primary sales and service contact for Amateur Radio customers.

(*****
RADIO AMATEURS WORLD ATLAS

The American Radio Relay League has announce the availability in time for Christmas of The Radio Amateurs World Atlas. Published in English by the German Amateur Radio organization, this booklet is now being distributed in the United States by the ARRL as a complement to the recently revised ARRL World Map and Map of the US.
The World Atlas includes separate, easy-to-read color plates of North America, Central America/West Indies, South America, Asia, Indian Ocean, Japan, Australia/Pacific Ocean, Europe, Africa and Antarctica. Each map shows country boundaries with prefixes, along with CQ zones, states or provinces, major cities, rivers and mountain ranges.
The 8 x 11 inch booklet also includes an Index with both ITU allocated prefixes and national prefixes for each nation of the world.

(*****
IRISH REPEATER

From Ireland word that the EI7CS Repeater is coming more into daily

use as a result of an overhaul that has dramatically improved its coverage. In fact the EI7CS repeater now boasts users in two separate countries. Ireland and Scotland.

(*****
SAREX 1995 WRAP UP

As 1995 drawers to a close, so does another milestone year for SAREX
-- The Shuttle Amateur Radio Experiment.

Space history was made in 1995, for this was the year when the United States and the Russian space programs stopped racing one another and began working together toward a common goal. It was an

equally historic year for SAREX, the Shuttle Amateur Radio Experiment. When astronauts in a space shuttle flew up to the Russian MIR Space Station rendezvoused and docked and exchanged visits with the cosmonauts. They took ham radio along to share the experience.
The first SAREX mission of the year was in March, and it was the longest shuttle mission in history. Six of the seven crew members were licensed amateurs and they stayed in orbit for 18 days, talking to students in a record breaking 26 schools.
In June, STS-71 was the first Shuttle-MIR docking with SAREX aboard.
Charlie Precourt, KB5YSQ even piloted the Atlantis during the rendezvous and docking. He and Ellen Baker, KB5SIX used both SAREX and MIR hardware for their 2 meter contacts, using a 10 watt wide band radio designed for use by NASA to communicate with MIR.
A few days after 71 landed, STS-70 took off from Cape Canaveral, and
provided contacts with 8 schools, talking to 291 students and making 400 voice and almost 800 packet contacts with the general ham community.
Finally, in November, STS-74 went up, with an all ham crew, headed by commander Ken Cameron, KB5AWP, flying his third SAREX mission. They also rendezvoused and docked with the Russians, while sharing the incredible experience via amateur radio, making more than 100 general voice contacts a day and talking to 5 schools with an estimated 2,300 students participating!
There are at least 5 SAREX missions scheduled next year, beginning in March. These include 2 docking missions during which American astronauts will be left aboard the MIR. Shannon Lucid, who is waiting for her license, and Jerry Linenger, KC5HBR, both plan to contact U.S. schools while they are aboard the space station.
More than coincidentally, all of this action with the Russians is leading to an International Space Station in orbit, with first hardware going up in 1997 and a finished configuration by 2002. The SAREX Working Group is at work with NASA, designing and developing what they hope will be a permanent manned ham radio station in orbit, complete with voice, packet, video and all sorts of experiments.
1995, four SAREX missions, making a total of 19 in all since the first one in 1983. Yes, 1995 was a very good year for SAREX.

By the way, for those of you living outside the United States, you can get a glimpse and an ear of Roy Neal's talent as a professional broadcast journalist. Once again, Roy will be hosting the worlwide television coverage of the Tournament of Roses telecast, live from Pasadena, California on New Years Day.

(*****
DX - CY0

In DX, word that VE9AA, WA8JOC, W9OEH and one additional VE operator
to be named later, have received licenses for Sable Island with the

assigned call sign of CY0AA. The team is still working through the red tape to get landing permission. The operation is tentatively scheduled for June 1996 for 7 to 10 days. The team plans to concentrate on 30 through 6 meters, but wire antennas will be brought for 40 and 80 meters just in case of poor propagation that renders the higher frequencies useless. Any questions can be directed to VE9AA or WA8JOC.

(*****
NO RESPECT

The comedian who says he never gets any respect now has now been trashed on the Internet. Comedian Rodney Dangerfield has had his wed site desecrated by a group of hackers known as the "Chaos Merchants." The anti-commercial group quite literally stole the "home page" of Dangerfield's web-site and left a trademark picture of a naked lady in its place. Dangerfield discovered the break-in when someone tried to download from it and encountered problems. That person reported it to Dangerfield's accounting firm who then discovered prank.
For those of you who are not aware, the Chaos Merchants are a group

of hackers with a vengeance aimed at the Microsoft and IBM empires. They also do not like commercial ventures such as Dangerfield's highly publicized internet site. The comedian's location on the web brings in an amazing 80,000 inquiries a day.

3507. ** NEW JERSEY VE EXAM SCANDAL **

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-10 00:00:00 UTC
From: HWDX09A@prodigy.com
Message-ID: <4afr7u$27ke@usenetz1.news.prodigy.com>
Source record: 234122

The first notices have just arrived this weekend but
there seems to be a examination scandal developing
where 22 amateurs have been ordered to retest by
February 10, 1996 or revert back to their amateur
privileges prior to the test sessions in question.

The problems seem to center around a team that
has tested amateurs in the Plainfeild, NJ area. One
test session under scrutiny is September 3, 1994
but this apparently is not the only one as it had only
5 examinees and there are 22 reported amateurs
who are effected.

Few details have surfaced as yet but the word is
that the FCC has conducted a confidential investigation
that resulted in this action.

I would appreciate hearing from anyone who has
any details of the situation as one of my club members
has been served with a retest notice and we are very
interested in hearing what has taken place.

If I knew you Mike, I might actually feel sorry for you. Luckily I don't know you and feel free to speak (type).

It takes a narrow mind to be so blind to the truth around you. Maybe the new no-code tech down the block isn't as smart as another ham in the neighborhood who holds an amateur extra ticket and heats his shack with tube gear he built in the 50's. But who expects the no-code tech to be when this person's only been in ham radio a couple of months.

If you took the test that the FCC says you've got to take to be a ham radio operator, and you passed that test, and you got your license in the mail and it's signed, YOU ARE AN AMATEUR RADIO OPERATOR!!

Grow up and live with it already, your posts are getting really old.

BTW

I don't agree with the no-code tech license, but I will call anyone who legally posseses one a ham radio operator.

Actually I was trying to point out the fact that being in a chair already
makes me geeky looking and that carrying a radio around was bound to have
little effect on that.

I've never used a wheelchair to gain sympathy. Ask anyone who knows me.

> everyone else. Isnt that what you want. By the way your responses show

I later wondered if you had mixed me up with Clint seeing as I tend to
carry my radio in my bookbag.

Yes I do enjoy good banter.

I thought it might be a rumor. That's too bad there's no point in anyone
spreading lies about other people. The bad part is that not everyone
that has spread this rumor knows that it's not true.

> I did however have a meeting with them about 6 months ago to discuss some

I'm glad it's been cleared up though. Also the jerk that had been
jamming 147.24 hasn't been very active lately.

I'd like to see his butt in a sling though. My girlfriend fell out of
her chair and I used my radio to try to get help since she was also
blocking me from exiting her van. The jamming started right away and it
became very difficult to get the required information to Brent who was on
his phone to the 911 operator.

Type to you later, and sorry for the misunderstanding on your license.

To my knowledge, the free expression and exchange of ideas on
the amateur bands has never been seriously threatened within the
United States. The manner in which these ideas are stated has been
when profanity and vulgarity are involved.
The use of profanity and vulgarity does not enchance one's
ideas or arguments what so ever, in most cases the value of the idea
is cheapened. In addition the use of such language devalues the
speaker in the eyes of many.
Profanity and vulgarity are not necessary to free expression!
It can be argued that free speech is a constitutional right and it is
but there are certain limits. If one wishes to explore these limits,
cry "Fire!" in a movie theatre. The "jack-booted thugs" will appear
and then the argument of free expression can be taken all the way up
to the Supreme Court.

Mr. Micales doesn't seem to believe that there are reasons for not
being able to upgrade.
I got my Novice license in 1967, while in the service. Between the
time I passed the test and the time I received my license, I was
stationed at a base with no operating station, and as far as I could
tell, no one to Elmer me, and help me get something going. I lost
contact with amateur radio for almost 20 years (the assholes at HRO in
Oakland in 1984 didn't help) because of this.
There's no damage to being able to retain an entry-level license for
long lengths of time, and significant advantages, and I suggest Mr
Micales think about this again.
73, doug

I don't think that a two year limited license is an unreasonable amount of
time to at learn the theory for a Tech. I am surprised you did not get the
time to operate since that was the first thing I did when I got my ticket. Of
sourse, when you got your it may have been the 1 year Novice (which is a short
time). However, I was in college at the time that I got my Tech so I had
little also to study..but I did!

Have you ever bought anything from Oklahoma Comm Center (1-800-765-HAMS)??

I'm looking at buying a radio mail order from them. They are $30 cheaper
than most other stores with free shipping and I'm not sure of thier
reliability.

e-mail to gregkopp@en.com or n8jms@cars.org

I need to find a tracking device, in a small package (say the
size of a pack of cigarettes or smaller) and receiver, range at least
a mile, hopefully for a reasonable price. Anyone know address/phone of
manufacturers, or plans (Popular electronics?) or kit?

Well this afternoon I discovered that the bottom cap is glued on and by doing a little prying with a small screwdriver I was able to pop it off. I tried it on a second battery and that bottom appears to be glued on better so I have not been able to get it off yet. I would rather not beat the case up.

Carlos, You are much better off spending your money on a Timewave DSP at less than half the price. I have used a DSP-59+ for about a year and it works great.You should to pick up one for around $260.00. They have a new one out called the DSP-599ZX that is around $350.00 but I haven't got one yet. I am waiting on an Email message from them about a couple of features. 73 es CUL

3538. Re: PACKARD BELL >>WILL NOT<< SCREW YOU!!

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-11 00:00:00 UTC
From: m-holl@tvd0002.urh.uiuc.edu
Message-ID: <4ahh9q$464@vixen.cso.uiuc.edu>
Source record: 234051

I have had a great deal of experience with Packard Bell over the past few years, and I personally have no idea where anyone could have developed such negative opinions of PB, their machines, and/or their support staff.

Two years ago, my parents decided to buy a computer. Being on the lower end of the economic scale, they decided on Packard Bell, as their prices are definitely the most reasonable you can find on the market. Things weren't looking so good, however, when the TV tuner card went out a week or two after buying the machine, but we found the hardware support staff to be very helpful and knowledgeable. When a simple procedure that they suggested we try didn't work, they sent a technician within two or three days with a replacement. Since then, my parents haven't had one problem at all with their computer, despite the fact that they turn it on and off up to five times a day (they say they don't want to "waste electricity." *shrug*)

Back in July, I was finally ready to spend my hard-earned money on my first computer, which I needed for college. I shopped around with an open mind, but soon found out that, once again, PB turned out to be the best value on the market. So, despite the fact that several of my friends advised against it (although they never really gave a good reason why), and the rumors that Packard Bell "sells used parts as new," I went ahead and bought a PB 417CDT, a Pentium 75 MHz mini-tower, and a 15" monitor.

I've been running Linux on my machine for the past four months, 24 hours a day, 7 days a week, with not one problem at all. I added 8 MB of RAM last month (which I ordered from your average joe memory mail order company for $250) and have been extremely pleased with my system's performance.

I don't know why so many people have such negative opinions of Packard Bell, but I have a few theories. Many of the problems I've been reading seem to be with Packard Bell machines from years ago. Perhaps, ten years ago, PB did make low quality machines and provide terrible tech support. However, I have seldom seen complaints with any of the machines from PB's current line, or any of their machines from the past five years for that matter.

As far as the problems with tech support go, as I said, I've always been quite pleased with the helpfulness, courtesy, and speed with which they respond to problems.

Also, it seems to me that a lot of people form opinions about Packard Bell based on pure hype. For instance, when I first brought my

machine on campus, a few people laughed at the idea of owning a Packard Bell, and better yet, running one as an Internet server. They shut their mouths pretty quickly, though, after seeing just how well my machine performs, especially under such memory and video intensive programs as X Windows.

Perhaps I have just been "lucky", as I'm sure many of you will suggest. I find this very hard to believe, though, as working at a major computer retailer over the past year has given me a lot of first-hand experience with several different computer products. I have seen far far fewer problems with Packard Bell's machines than any other.

In conclusion, I would very highly recommend Packard Bell over any other PC. You just can't beat it for the price, features, ease of use, and support.

Just another extremely satisfied customer...

>Any help/suggestions would be appreciated.

A couple of suggestions
Relays may be a cause. It helps to periodically cycle through
all the bands to exercise the contacts - expecially if you tend
to operate mostly on one band.
One of the jacks on the rear is also the transverter switch
(forget the ID - I no longer have a 430). This contact can be
exercised as well by plugging and unplugging.
General help for many of this vintage radios Tighten screws
that hold PC boards to chassis. Carefully unplug and replug each
of the small connectors to the boards.

PC Magazine, 1994 (May I think) "Packard Bell had the second highest
return/failure rate of any computer manufactuer." The rate was 31%, and
it was for the 1993 calender year.

Great and those of us who want only to provide some community service and enjoy the hobby at the level we are at don't count? I have no interest in HF or code. Does that make me not a REAL ham?

This is a HOBBY, for enjoyment. Learning something like code is not enjoyable to me, nor is the privelidge of using bands I do not wish to use.

It is not the thought of failing, I can pass most with the knowledge I have now. It is the lessening of my enjoyment of this HOBBY that concerns me. I don't presume to speak for everyone, but I feel that as long as I have upheld my end of the bargain you should not try and change the rules on me for your own ideals of what this HOBBY should be.

Again I stress that this is a HOBBY, something that we like to do and enjoy. Lets keep it that way.

Mike why do you feel that a person has to upgrade? What is the justifucation
for having to do so. U am not being a smart ass, I would really like to
know.

I thought of upgrading, I even got a copy of the exams for general on disk.
Just for fun I took a sample test and aced it with out studying. My
electronics knowledge is adiquate for most if not all of what is required,
so passing the exams would not be an issue. But why should I HAVE to do so.
I just can't think of one good reason that as long as I am following the
rules, enjoying my self , participating in our local club, helping out with
public service, that my licence should be time limited or that I HAVE to
upgrade. After all isn't enjoyment of the hobby what it is all about?

They should take it back and give you a refund.
They will not fix it because it is a multiple of the color burst crystal they
are using to drive the uP.

Mike:

As I posted in another place in this newsgroup today, I am a
no code technician.

I am UNABLE to go any higher because I CANNOT tell the difference
between ._ and _. (a and n). I can read CW when printed, but can-
not determine the difference by ear. It is a matter of the BRAIN.
It does not work normally.

Maybe you are right. Maybe I should not be allowed to assist the
local police department with weather, disasters and fires and etc.
Maybe I should say that these things can wait until someone that
does not have my problem comes along. I don't feel you are
right in all cases.

BUT

YOU ARE RIGHT about some of these people that get on the club
antenna and make a real problem of themselves. Some of them
even refuse to relinquish to emergencies. Most of these are also
no-code techs.

Thanks for listening to a lazy lame-brained no-code tech.

He didnt say that...all the man said 'it seems..' This is obviously
just his opinion, but the last time I checked, everyone was entitled
to their own opinion...even you!

>Ham radio is full of those of you who want to "clean up" the bands
>and dictate to others what they can and can't say.

This is your opinion...It seems to me as if there are a lot of foul-
mouthed idiots out there grimly determined to hide behind Freedom of
Speech in their unmannerly use of the English language. Are you saying
you support such things? If so, do it RIGHT OUT IN THE OPEN! Dont hide
or be coy..just tell us you like hearing obscenities all over the bands!

>
>The jack-booted thugs of Ham radio who continually try to suppress
>free expression have long been with us. It's part of the

>amusing to see and hear.
>
>mike wa4d
>
"Jack-booted thugs"...?? Really? My what an active little imagination
you seem to have! Or are you suggesting that some Amateurs have really
tromped into your shack and violated your civil rights? I seriously
doubt it somehow. Please, if Im wrong - tell us about it.

I think it's even more amusing when someone is pulled out of the
woodwork by a harmless comment, and rags on the commenter about their
being the "Real Problem" all the while insisting on their rights but
wanting to deny the other the same right of expression. Grow up Mike.

There's really no reason for using profanity on the radio...none but
perhaps to divide the 'riff raff' from the more refined..does that strike

close to home? Maybe in the same way as Richard's comment about the uneducated?

Just my opinion Mike, maybe you need to reread the Amateur Code of Conduct...

Hey Mike,

Quit your bitchen and get a real internet account. All CIS people
are just real internet wannabes.

And quit sniveling that a moderator booted you off Hamnet over on CIS.
If you can't take the heat don't throw gas on the fire.

No reply is needed since my field is physics not proctology thus I have
no interest in you.

A note to those in the Washington DC area (my sympathy) if this twit
really engages in intentional and malicious interference write it up
every single time it happens. Keep the complaints hot and heavy to the
FCC. Budget or no budget they will soon get fed up and give him an NAL

You know, with such idiots as yourself counting themselves among the ranks of "real hams", I don't know if I would ever want to be known as a "real ham". And there lies the downfall of ham radio, not because I don't want to be a "real ham" but because of the arrogance of such IDIOTS as this Mike Whatley that so many people just dont even want to get started with ham radio.

But for myself, I don't care about such idiots as mike BUTTley and I will become a ham, but unfortunately for the rest of the world I will have to stay in the ranks of the.....UNREAL HAM.....

Time to take off the blinders. IMO Morse code testing is exactly like
swallowing live goldfish - After all, fish is good for you just like
Morse code. Everyone should be forced to eat fish - right?

>Micales think about this again.
>73, doug

Perhaps Mr. Faunt misunderstands me when he states that I " dont believe that there are reasons for not being able to upgrade". Of course there are..medical and military service (not being stationed at a base , but rather combat service) are two that come to mind. If there are others, my apologies for not mentioning them.

Mr. Faunt states he did not have a operating station or an "Elmer" to get things started. However, this should not prevent him from studying the theory himself and upgrade from a Novice to a Tech (no additional code needed).

I was at college at the time of my Novice and upgrade to a Tech. I was not an EE major but rather biology. True, the service may not give you as much time for study as college, but still there is some time. In addition, I did not have an operating station or any "Elmers" to ask for help. My point is simple, nothing about military service (unless you are stationed at sea for some time or in a combat zone) should prevent you from upgrading. If you are in a military situation or other situation that prevents you from being able to upgrade, then the FCC should provide an extension of the license to allow this (and perhaps they do -- I do not know).

In any case, my statements were general and there will be exceptions to the rule. My apologies for "stepping on anyone's toes".

Therefore Mr. Faunt, I HAVE thought about this subject again (as you suggested) and have come to the same conclusion as before. The Novice license should be limited in time (2 -5 years), not renewable, and allow the person to get a flavor of amateur radio (a hobby and a service).

I would like to remind the reader that these are my opinions and only my opinions. Thank you and 73

3557. Supposin' (ii)

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-11 00:00:00 UTC
From: k0hb@hamlink.mn.org
Message-ID: <818717045.AA04555@hamlink.mn.org>
Source record: 234070

A while back I posted a hypothetical question here entitled
"Just Supposin".
I got a couple of thoughtful answers, and then the usual
vultures descended to pick apart the opinions of their peers.
(Rather than post opinions of their own.)
I feel that the following has relevance.
>
>Poem by Gail Barnes
>==
>>>
>>> I Shot A Query Into The Net
>>>
>>> I shot a query into the net.
>>> I haven't got an answer yet,
>>> But seven people gave me hell
>>> And said I ought to learn to spell;
>>>
>>> A posted message called me rotten
>>> For ignoring mail I'd never gotten;
>>> An angry message asked me, Please
>>> Don't send such drivel overseas;
>>>
>>> A lawyer sent me private mail
>>> And swore he'd slap my butt in jail --
>>> I'd mentioned Un*x in my gem
>>> And failed to add the T and M;
>>>
>>> One netter thought it was a hoax:
>>> "Hereafter, post to net dot jokes!";
>>> Another called my grammar vile
>>> And criticized my writing style.
>>>
>>> Each day I scan each Subject line
>>> In hopes the topic will be mine;
>>> I shot a query into the net.
>>> I haven't got an answer yet ...

For those who missed it the first time around,
below is a second try. (Note the opening line!)

JUST SUPPOSIN'
Putting aside all the arguments which have raged since Marconi
was a Novice --
...Just supposing--

1) WARC 99 removed the Morse requirement from Amateur Service
regulations, and;
2) FCC then decided to amend US regulations to remove the
Morse requirement from Part 97.
...And assuming--
1) A beginners (entry class) license is desireable, and;
2) A system of encouragement and recognition of advanced
knowledge and/or skills is desireable.
...What recommendations would you make for changes in the testing
and licensing structure for licensees in the US Amateur Radio
Service and/or Amateur Satellite Service?

There are also the CW nets if that's your cup of Java. I like the following:

SEASON (South East Asia Station Operators Net) on 14.040 at 11:00 UTC.
Speed is about 40 WPM, many maritime mobile ops and a fun group.

SEANET-CW 14.032 @ 23:00 UTC weekly.

Others of interest:

FAR EAST NET: 14.285 @ 02:00 UTC Sunday Mornings. This net control is from Korea, run by several HL9's (US Military Personnel in Korea) and is freqented by several JA's, BV's, and a few VK's. More of a rag-chew net but good info and occasional newsline updates read over the air. Net is entirely in English, and many check-ins are expatriated from the USA or Europe.

Catch ya on the air.

3561. 430S intermittent

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-11 00:00:00 UTC
From: bmortens@direct.ca
Message-ID: <bmortens-1112950156580001@kel-pm-0104.direct.ca>
Source record: 234074

I have a Kenwood TS-430S that's sick. Symptoms are:

An intermittent cut-out of audio (the band just goes dead -- noise only). However, if I tune across the band, and there's a loud station, the receiver seems to come back to life suddenly and stays that way for a while. I have checked the squelch and RF gain controls -- they're fine.

Does anyone know if this is a problem that's arisen with 430Ss? How about a quick-fix suggestion (I am handy with a soldering iron, but I'd like advice from someone who's run into this previously, before I go poking around in under the hood).

My suspicions include: a sticky band-switching relay (which look really hard to get at at the back of the rig). What's the 10-minute repair for that? OR: a cold solder joint somewhere. Yikes!

My concerns include: would this problem also occur during XMIT? (I think it is happening during transmit).

Any help/suggestions would be appreciated.

Yes it is a barrier, but what is the *purpose* of that barrier? *Most*
licensing exams are in place to prevent harm or injury to either the
licensee or others the licensee might affect. Medical licenses, pilot
licenses, drivers licenses, etc., all exist to protect people. How does
"meaningful" fit into that? The federal government isn't in business
to enforce your notion of worth.

> The level of license is a statement of one's overall commitment to
> radio science, much as the level of one's education.

Commitment isn't part of the "Basis and Purpose" of the amateur radio
service. Perhaps it is a "meaningful" thing that you place a great deal
of value on, but don't expect everyone to accept your value system.

> My Extra call is
> the result of a commitment to advance myself, and in the days before
> Dick Bash and the later FCC cookie-cutter testing I bore my call as
> proud testament of my commitment to and achievement in the hobby.

Good for you (this is said in all seriousness, although the apparent sneer
at those licensed after Vince's so called "easing of standards" is really
uncessary.) If you feel there should be rewards for advancement, then
set them up? Lobby the ARRL to set up additional awards or recognition
schemes that support your values. But please don't expect the federal
government to force them on the rest of us.

>>I've only been licensed a few months, but I've already learned more

> they're doing. And the higher the class, the more you oughtta have to
> demonstrate...

Your examples are basic operating concepts and should be tested
for any license (although my guess is that your own knowledge of TVI should
be updated if you believe that a low-pass filter is the solution to many
TVI problems these days.) Those concepts are part of the material
necessary to prevent harm to others. We should be tested in the areas
that prevent harm to other radio services, to the amateur service, and
to non-amateurs where appropriate (such as trying to use a microwave
oven Klystron in an accessible area, tower climbing guards, etc.).

That knowledge should be required of anyone allowed to operate a
transmitter. I can see having levels of knowledge and corresponding
levels of licenses if there are corresponding dangers or potential for
harm. Pilot licensing is a prime example of this where instrument
rated pilots can fly under more difficult conditions and have presumably
demonstrated that they can use instruments to help mitigate the
associated dangers. In amateur radio, one area that this seems applicable
(and has precedence in Canada I believe) is in the use of QRO
or homebrew equipment. But I fail to see how recognizing advanced
knowledge or skills simply to glorify "commitment" is within the scope
of the government's purpose as stated in the Constitution.

I used to talk to Joe Walsh frequently during the mid-80's on 75 mtrs. One night in a discussion I mentioned that I only enjoyed RoseWood Bitters as opposed to fawning all over the guy like most hams. He got pissed because a group of us didn't suck up to him and left. Never came back.

Great singer/writer. But thin-skinned.

Hello fellow hams:

I am planning to attend the big event for the
first time - the 1996 Dayton Hamvention.
Can anyone help with information? Such as
dates, costs, where it is located, where to
preregister, where to stay, etc.

It will be a long way to go, is it worth it? I am
especially interested in the swap events and
getting some older HF equipment.

Any help would be appreciated. 73 de Jim, KB7ET

Except that amateur radio isn't a private "fraternity", requiring a display of devotion to the "hobby" like swallowing live goldfish or group masturbation in the quad. It's a government-sponsored *service*, requiring only licensure to the satisfaction of the gummint, not to other hams (and especially not to Mike and Mike).

Ah, but it used to be a sort of "fraternity"..probably something you
will never realize..the actual demise started back around 1967
when the ARRL started their "incentive" licensing..The amateur
bands were suddenly segregated..little interaction between
general, advanced, extra and novice..I remember before "incentive"
licensing the on the air discussions of basic theory, Upper grades
operating in the novice bands (75w input, xtal controlled 1year
licenses) to give the newbies practice..as a novice I used to listen
on the general etc portions listening to the discussions and taking
notes.. It was fun to put in the effort to upgrade..and your fellow
ham knew what you went through to do it..I remember taking all of
my tests in front of an FCC examiner (when many FCC examiners
were hams and not just lawyers)..I still remember that old guy
smoking his cigar listening to me send code in NYC in that FCC
examining room...I remember having to draw schematics of circuits
and have an understanding of basic circuits and operation..Yup
amateur radio is going down the tubes..mainly because of those
that don't feel it's worth any "devotion" and "sweat"...I have lost
lots of respect for ham radio, because of those that feel ham
radio doesn't deserve any devotion or that fellow amateurs are
are not part of a special group...And as I and others lose our

respect of amateur radio, you can expect more jamming, cursing etc..because it will have transformed itself to the lower forms of CB.

Yup, Just like Jerry Altzman said, he doesn't think it requires any devotion...Yeah Jerry I guess you kinda made it so it's like renewing the registration on a car..

I agree with it being irrevevant. He has stated this before, and somehow thinks it 'qualifies' him as a better Ham. He has also stated that he has "done this" or "done that", heck, he has claimed to DX "around the world" in his short 3 months as a Ham! Something that most Hams cant complete in their lifetime!

He is just a 'know-it-all' kid, that spews drivel...ignore him.

<<It's funny, it doesn't get any truer no matter how many times you
<<assert it. How is the Amateur Radio Service racist? Does the FCC
<<prohibit licenses to people of certain races?

You don't need to be an empirical statistician to figure it out. I'm always amused by those of you who must see visible obstructions to entry in the hobby. Like when George Wallace stood at the door of the University of Alabama decades ago to deny entry to a black man. Racism is far more subtle these days.

But Hey! Don't just ask me. Ask black or hispanic hams.

You disappoint me Jerry. A guy from a leftist outfit like cuny needing some sociological hand-holding.

That would not do any good. I suspect that Mike thrives on the attention he is getting, and the discord that he causes.

There are really only two choices - other than responding.

The first is, as suggested by Mark - simply ignore him, if you don't agree with is posts.

The second, which may or may not do anything useful, is to complain to his system postmaster. Most likely, you will not get any results, as Mike is not doing anything illegal - but it might calm you down a bit.

By the way, if no one responded to his posts, I would not see any of them. I put him in my kill file, the first day I started reading this group.

Hi Steve,

I went on a cruise to the Bahamas, but I was not interested in
using the HT on the islands, just the ship. If the ship is registered in the
USA, there will not be a problem, but you must first get permission from the
captain to transmit. What islands are you going to?

I suspect that you are being sarcastic, but I'll tell you what:
Even though I don't agree with Mike Whatley all the time, at least he
has the balls to stand by his convictions.

I do agree about goverment being too large, however, and think they
step into our lives a little too much. It seems that there is always some
"holier then thou" individual ready to shove rules down your throat!

Mike is entitled to his opinion just like everybody else and it seems
that most people on this thread are forgetting that. He believes that
Techs and Tech pluses are under achievers. Thats fine! Nobody is
going to convince him otherwise, especially if you flame him. Nobody's
opinion counts more than another, so as long as we respect that then
there is no real arguement!

Maybe it is time we changed the subject!!

I guess you're easily amused then. A racist group of hams may discourage some from joining their little clique, but that doesn't stop them from joining the Amateur Radio Service and joining some other group or even forming their own. Pointing out that there are racist people in the service does not make the service itself racist, even if those people were a majority (which I see no evidence to convince me is true.)

> Like when George Wallace stood at the door of
> the University of Alabama decades ago to deny entry to a black man.

O.K. What are the subtle ways in which the Amateur Radio Service is racist? There really is a difference between cause and correlation. You have pointed out a correlation and have jumped to conclusions as to the cause. (Unless you have some evidence that you've chosen not to present here.)

Actually, those astronauts were in freefall for days and weeks, so they
weren't really "sitting on their asses" at all.

The closest parallel I can think of to ham contesting is a bunch of
guys sitting on couches eating chips and peanuts and swilling beer while
watching an entire weekend's worth of football on TV.

To the best of my knowledge, there are no waivers for the 5wpm
requirement. However, at 5wpm, input can be visual even though
it violates the wording of the treaty (copied by ear).

Many of the larger marine supply stores carry many different ones on
their shelves..they also provide catalogs..
Try West Marine and E&B for a couple...check your local area
suppliers, they could use the business this time of year..
I am kinda partial to my Garmin 45 which has outputs..I bought it
locally at E&B, but bought the accessories at West Marine also
local..

Steve, WA2NHZ

ps..West Marine and E&B both have large catalogs and
offer mail order..

Well, I received this in email - it was apparently on one of the
military newsgroups a while back....
Some others may not want to know this much...
Those can go to the next message...

It seems like the old like about "standards" apply here... "The
wonderful thing about standards is that there are so many of them".

The following is a partial clip from a 19k text file. I chopped all
the non-english ones to minimize bandwidth.

As soon as a couple of my friends get back to me I'll be sending
the author the official L.A.Police Department and L.A. Sheriff's
Office alphabets.

And I appended a "alphabet" from rec.humor.funny to the end.

Subject: Alpha Bravo Charlie Delta: phonetic alphabets (revised)
Date: 21 Apr 1995 19:41:24 GMT

Phonetic Alphabets (Alpha Bravo etc)

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets and spelling alphabets. This collection
currently includes alphabets for the following languages:

English, French, German, Dutch, Flemish, Spanish,
Italian, Rumantsch, Slovak, Polish, Hungarian,

Croatian, Turkish, Swedish, Finnish, Russian,
Chinese and Esperanto.

This posting supersedes the one of 10th March. There are numerous
changes and additions.

Some of the more recent new material:
Spanish 21 Apr 95
Turkish 10 Mar 95
Croatian 24 Jan 95
Russian (Anna Boris) 15 Dec 94
Esperanto 17 Nov 94

My thanks to the many contributors, not all of whom are acknowledged
below.

I can make no guarantee of accuracy of this information; indeed
please send me any corrections or additions.

In my capacity as the editor of this collection I have no objection
to the further electronic distribution of this posting in full in
circumstances where it is likely to be of interest.

Comments in square brackets are my own.

Brian Kelk bck1@cl.cam.ac.uk
21 April 1995

***** ENGLISH *****

The NATO phonetic alphabet (as per the Cambridge Encyclopedia
of Language under Seaspeak):

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[The same alphabet, modulo Alfa and Juliett, is approved by
the International Civil Aviation Organization and the FAA.
The International Telecommunication Union Phonetics list
has: Alfa, Juliette, Oscar/Oskar, Victor/Viktor.
Dates from about 1956.
UK police use Indigo(?) instead of India.
See also http://aviation.jsc.nasa.gov/alphabet.html]

Telecom B:

Alfred Benjamin Charles David Edward Frederick George Harry
Isaac Jack King London Mary Nellie Oliver Peter Queen Robert
Samuel Tommy Uncle Victor William Xray Yellow Zebra

[Found also in Swedish, Dutch, Hungarian telephone directories.
A Swiss directory has: Andrew Charlie Lussy Queenie Sugar.
French/German vocabulary books: Andrew Charlie Lucy Mike
Nelly Sugar Xmas]

British A:

Amsterdam Baltimore Casablanca Denmark Edison Florida
Gallipoli Havana Italia Jerusalem Kilogramme Liverpool
Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli
Uppsala Valencia Washington Xantippe Yokohama Zurich

[An 'international' alphabet in a Dutch telephone directory
has: Danemark. A 'French' alphabet in a Hungarian directory
has: Cassablanka Danemark Que'bec Upsala Zu"rich.
An 'international' alphabet in a business book for French
has: Italy Kilogram Zu"rich; the corresponding book for
German has: Italy Kilogram Xanthippe Zu"rich]

Used by police in New York City:

Adam Boy Charlie David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Peter Queen Robert Sam Tom
Union Victor William X-ray Young Zebra

[Variants: Eddie Larry Nancy Thomas Yankee Yellow]

Used by police in Nassau County, Long Island, New York:

Adam Boston Chicago Denver Edward Frank George Henry Ida
John King Lincoln Mary Nancy Ocean Peter Queen Robert Sam
Thomas Union Victor William X-ray Young Zebra

Used by police in San Diego, California:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Queen Robert Sam Tom Unit
Victor William Xray Yellow Zebra

Used by police in Hutchinson, Kansas:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Q.. Robert Sam Tom Union
Victor William X-ray Yankee Zebra

Sometimes used by radio hams (unofficial):

America Boston Canada Denmark England France Germany
Honolulu India Japan Kilowatt London Mexico Norway Ontario
or Ocean Pacific Quebec Radio Santiago or Spain Tokyo United
Victoria Washington Xray Yokohama Zanzibar

[Much variation: Amsterdam, Brazil, Baltimore, Chile,
Finland, Greece, Guatemala, Hawaii, Italy, Kentucky,
Luxembourg, Nicaragua, Portugal, Romania, Sweden, Texas,
Uruguay, Venezuela, Whisky, Zulu]

The ARRL (American Radio Relay League) alphabet (1948):

Adam Baker Charlie David Edward Frank George Henry Ida John
king Lewis Mary Nancy Otto Peter queen Robert Susan Thomas

union Victor William x-ray young zebra

[Nowadays the ARRL endorses the NATO/ICAO alphabet]

Pre-1954 U.S. Navy Radio Alphabet

(Communications Handbook, 1945)

Able Baker Charlie Dog Easy Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tare Uncle Victor
William X-ray Yoke Zebra

"Used by Armed services of USA & GB" (ARRL Handbook, 1945)

Able Baker ... Easy ... Tare ...

Allied Services 1945:

Able Baker ... Edward ... Tape ...

>From a book entitled "The Complete Morse Instructor..." (1944):

Able Baker ... Easy ... Tare ...

[See also http://aviation.jsc.nasa.gov/old-alphabet.html.
In other alphabets of the Able Baker class: affirm, cast,
hypo, inter, negat, option, over, prep]

Western Union:

Adams Boston Chicago Denver Easy Frank George Henry Ida John
King Lincoln Mary New_York Ocean Peter Queen Roger Sugar
Thomas Union Victor William X-ray Young Zero

British Army 1927:

Ack Beer Charlie Don Edward Freddy George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc
Uncle Vic William X-ray Yorker Zebra

Royal Navy 1917:

Apples Butter Charlie Duff Edward Freddy George Harry Ink
Johnnie King London Monkey Nuts Orange Pudding Queenie
Robert Sugar Tommy Uncle Vinegar Willie Xerxes Yellow Zebra

U.S. Army 1916:

Able Buy Cast Dock Easy Fox George Have Item Jig King Love

Article: 5533 of rec.humor.funny
Newsgroups: rec.humor.funny
From: rwilson@amsa.com (Rich Wilson)
Subject: new phonetic alphabet
Date: Sun, 5 Nov 95 19:30:05 EST

The same old standard phonetic alphabet (which you
would use to describe spelling "Wilson" as "Whiskey, India,
Lima, Sierra, Oscar, November") has been used by aircraft
pilots, millitary personnel, and many others for many years
now. So, I finally decided to come up with something a bit
more "original" for those people who annoy me:

A Are N Nine
B Bee O Owe
C Cite P Pseudonym
D Double-U Q Queue
E Eye R Rap
F Five S Sea
G Genre T Tsunami
H Hoe U Understand?
I I V Vie
J Junta W Why
K Knot X Xylophone
L Lye Y You
M Me Z Zero

People don't ask me to spell anything over the phone anymore.

From: depolo@blue.seas.upenn.edu
Message-ID: <4al25o$krv@netnews.upenn.edu>
Source record: 234010

I'm trying to find manufacturers/models of digital voice recorders. I'm looking for an external DVR that I can interface with my controller (not one of the "name brand" controllers, at least not yet, hi).

Not interested in any PC/soundcard-based systems. I know ACC has (had) a DVR for use with their controllers, and you can get a voice option on CAT and Kendecomm controllers. That's not what I want. I'm looking for an external DVR that I can interface with my controller. I know I'll have to design some interface hardware - that's OK. What I don't want to do is reinvent the wheel by designing/building a complete DVR from scratch if I can avoid it.

Someone mentioned FF Systems to me. I have most of their literature, but don't remember seeing anything about a DVR there. Anyone know?

>Any help/suggestions would be appreciated.

Hi Bud,
A number of years back Kenwood finally came out with an official
mod to keep the contacts on the relays clean..It involved only a
few components that takes about 1/2 hour to complete..I don't
remember the number of the service note, but I did install it..It
was free at the time..call them and request it...

my 430 had the same symptoms as yours and it fixed it completely..
now I have a pll problem where the radio doesn't display or rx
till it gets above 70 degrees...I might get into it over the Xmas
holidays...good luck

Thank you for reading this...

I bought a TR851A but it unfortunately has a 1.6Mhz split. In the RSA we are using a 7,6Mhz split. What can I do to change this...

They are WAY up on the north side of OKC (maybe even Edmond) and I'm way down
on the south side. But I've bought several things from them, no problem.
They have a small display area, but are basically geared to mail order.
They've been in business for a few years now. They try to stay competitive
even when Hams want the wholesale price. I've seen em sell a radio for
five bucks over wholesale. I guess there's money in volume...

Since we have a secondary allocation in that band, by definition we
have no protection and must accept any interference that occurs
from other users.

I've dealt with OCC on 3 occaisions, beginning about Sept. 1994. I have no complaints with them. I can't speak about return policies or anything, since I've had no need to return, but I'd encourage you to buy from there.

Sorry I missed the fornt end of this thread, so I don't know exaclty what you need but the 74xx299 is a 20 pin parallel in and out universal 8 bit shift reg. It should do the trick. Tons of other options as usual. Since your going to have to write a driver, you might want to use a microcontroller with a serial port to make you box look like some other modern device that is supported by whatever software is going to be talking to it.

3631. Ham stores/Chicago, 500W dummy load

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-12 00:00:00 UTC
From: gwilliam@xnet.com
Message-ID: <4akgih$j98@flood.xnet.com>
Source record: 234081
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

I am a non-ham who needs to buy a 500 W dummy load (for 13.56 MHz, preferably with a BNC connector) for an experiment in an industrial setting. Needless to say, I need this soon (like tomorrow). Can anyone tell me a ham store in the Chicago area (North/West would be preferable but not required) or a mail-order outfit that would be able to supply this item quickly? Alternatively, does anyone in the Chicago area have one that they could lend (rent) to us for a few days? Although it might be possible to build a dummy load relatively simply, I would prefer not to do that for reasons of repeatability (we may need to repeat this experiment in another location with different equipment at a later date.)

Any help would be appreciated.

Jeff Gwilliam

Dave, when I got my no-code I had full intentions of learning the code
and upgrading. Then I listened on the HF bands. I'm not going to bother
now. It's almost as bad as CB. The code, I'm sorry to say, has nothing to
do with on-the-air conduct. I'll stay on VHF/UHF and up, thanks, and for
that I don't need to upgrade.

>
Mike and Carl,

I have been a Tech for 19-20 years. I have not upgraded since I never felt the need for additional privileges. I am just as good a amateur radio operator as an Extra Class license. However, I do agree with Mike that a time-limited license is needed and that additional privileges are granted as an upgrade. If this is a problem for you, think of a time-limited (whatever the name) license as a "learner's permit".

Get a feel for amateur radio and then upgrade. The time of this license is up for grabs and has pointed out by others there are reasons for not being able to upgrade with in a one year time peroid.

Amateur radio is both a HOBBY and a SERVICE. The hobby is the day to day use we have of the radios but this is just in preparation for the day when these radios could be used in emergencies. This is the service that we provide plus the public service function.

Yes, technology has progressed over the years and the use of amateur radio in emergencies has declined some,. but amateur radio is always there as the final "fall-back" and we should always be ready to step in and help (the public and each other).

Ok, getting off the soap-box :). Sorry.

Actually we only have to accept interference from primary users (HIGHER
priority levels than ours), in this case the U S Govt. Amateurs are still
entitled to relief from interference originating from co-secondary and
NON-licensed systems such as the Part 15 stuff. That point was very
specifically addressed in the FCC actions earlier this year.

Jonette,

I had exactly the same problem you describe when I first tried to
learn code (back in the days of ration books, etc :)). I just could
not distinguish between similar sounds. Actually never got
a license then. Many many years later, I discovered CodeQuick, which
largely takes the cognitive part of the brain out of the *receiving*
of the sounds. I passed 5 wpm within a month of twice a day, six
minutes a day practice. 13 followed quickly; 20 later.

:Thanks for listening to a lazy lame-brained no-code tech.

I can't accept the "lazy lame-brained" part; our brains don't all
work the same (sometimes mine doesn't work at all:))

We just have to find what works best for each of us.

>nothing at all and I could operate anywhere that my European

You've missed the point, I'm afraid :-)

The issue is this:- There is *NO* way (that I know of, please correct me ...) that the FCC will issue a CALLSIGN to someone who desn't fill out a 610 with documented credit for the various examination elements. What the *will* do is issue an 'alien's permit' against a 610-A. This leaves a U.K. licensee operating as W/whatever and therefore bound by the frequencies/power limits (where <=) of their home licence.

For a U.S. General Class or above visiting the U.K., the DTI will either issue a LICENCE which shows the call as Gx/whatever *OR* they will issue a full A class licence. If you ask them they'll tell you that you won't be permitted to operate on 70.0-70.5MHz with the former, whereas you'll be entitled to with the latter.

Did this clear anything up, or just make matters worse ? :-)

Source record: 233900

Hello to everyone who reads this!

Actually I don t know if my question is located in the right newsgroup here, but I think my question can be answered from a (PR) HAM operator. Essential knowledge only ... :)

My question is: How can you calculate the needed bandwidth by knowing only the baud rate?

Could it be this: x baud = x Hz ? For example, transmission speed = 1200 baud, means badwidth of 1200 Hz?

Thanks a lot for all answers!

Bye ...

You're in the wrong newsgroup then. Try rec.sports.marathon or
rec.sports.triathlon for those types of contests. This newsgroup is for
amateur radio related topics.

I have participated in many triathlons, but don't think it should be mandatory
in order to be classified a "serious contester" - in fact, it has nothing to
do with radio contesting period.

==========

When I was last down there a couple of years ago, you did not need anything, but everything in Mexico seems to change every year. For years, I would stop by the palaccio federal and get a permit, but year before last, they told me that I did not need any permit. They just told me to identify as XE1K5HR or XE2K5HR or whatever was appropriate. I once camped out on a beach in extreme SouthWestern Jalisco and I counted 5 hams operating on that one small beach. One from Missouri, one from Nebraska, one from Nevada, A canadian from British Columbia, and me from Louisiana. Non of us had permits.

As I said, things change very often in Mexico, so here is hoping you have good luck.

3657. Best repeater controller under US$150

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-13 00:00:00 UTC
From: plaws@comp.uark.edu
Message-ID: <4alm79$ssd@wizard.uark.edu>
Source record: 233944

We're looking for a repeater controller. There are several on the market
that fit our criteria, but we're looking for actual experiences. The
criteria are (decreasing level of importance!)::

1) Less than US$150 ("Please Sir, we're poor students.")

2) must be expandable (provision for addition of DVID, links to other
repeaters and/or links to remote receivers)

3) phone patch would be nice.

Responses here or via email OK.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 13/2330Z DECEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 13 DECEMBER AND FORECAST FOR 14 DECEMBER - 16 DECEMBER

1A. SOLAR SUMMARY
Activity: Very low

Flares: None

Observed 10.7 cm flux/Equivalent Sunspot Number : 73/9

GOES satellite data for 12 Dec
Daily Proton Fluence >1 MeV: 3.7E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 2.0E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
14 Dec 15 Dec 16 Dec
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 14 Dec: 72/8

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 12 Dec
Learmonth 4 2211 0112
Fredericksburg 3 6
Planetary 5 4

Observed Kp for 12 Dec: 1100 1221
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
14 Dec 5 Quiet
15 Dec 5 Quiet
16 Dec 5 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

13 Dec Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
14 Dec Normal Normal Normal
15 Dec Normal Normal Normal
16 Dec Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
13 Dec -7

Observed Australian Regional MUFs:
Townsville: Near predicted monthly values with 20-30% depressions
10-14 UT. Sporadic E was observed 00-01, 03-04 and 08-09 UT.
Sydney: Near predicted monthly values to 15% depressed. Sporadic
E was observed 01-06, 09-23 UT. Spread F was observed 14-18 UT.
Hobart: Near predicted monthly values to 30% depressed. Sporadic
E was observed 00-05, 08-22 UT. Spread F was observed 11-17 UT.

Predicted Monthly T index for December: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
14 Dec -5 Near predicted monthly values to 15% depressed.
Sporadic E likely in the Australian region and
spread F likely in southern Australian region
during night hours.
15 Dec 0 Near predicted monthly values to 10% depressed.
16 Dec 0 Near predicted monthly values.

This sounds like a great deal of overkill to me.

serial-to-parallel: isn't a UART what is desired? Maybe a couple
more chips to generate strobe pulses, and a crystal; but that should be about
it.

Cheers,
Phil

It would most definitely not do the trick, at least not without large
amounts of support logic. The original post was about asynchronous
serial transfer. It can be done with the HD6402 as mentioned, but it
will take a few extra chips to go along. A microcontroller with onboard
PROM would probably give the lowest chip count, but you need some tools
that not everyone has available (compiler/assembler, device programmer).

The 6402 is also suitable. This may be pin compatible with the AY-1013,
and is definitely still available. You can choose parity/stop bits etc
by hard wiring various pins high or low, and it will run up to 100Kbps.
This version needs a clock input, but there's also a 6403 which has a
clock generator built-in so you can just add a Xtal.

This radio looks like exactly what I want (when I can afford it, and have
got my A).

But why do all these new rigs have to be mobile size !!

I'd much rather have a big rig where the functions aren't hidden down
menus and behind function buttons !!

(Still want one that runs on 12v though. I like the idea of being able
to run off batteries for portable work !)

I have had the 9612 for 5 Months or so and have nothing but good things to say about it. I use it with the 733 but have not yet hooked up for 9600, as I have heard lots of bad
things about the 733 on 9600.....mostly that it is not 9600 ready as advertised. However the Kpc is great and I would buy one again tommorow.

3669. No Code Solution

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-13 00:00:00 UTC
From: jwa@tellabs.com
Message-ID: <1995Dec13.140709.17343@tellab5.tellabs.com>
Source record: 233956

There's a simple solution to the No Code controversy.

Give H.F. phone privilages to the No-Coders and allow them,
for example, the General class phone privilages. They cannot
operate in the CW or digital portions of the band. i

When they learn the code they simply take the test and receive
a general class and the CW privilages.

The limited license will allow a person to wet his wistle and if
he want's to operate a digital mode, he (or she) will be forced
to learn the code.

From: tedwards@Glue.umd.edu
Message-ID: <4an6lg$3m8@volt.isr.umd.edu>
Source record: 233959

Pictures of the Spartan 206 OAST-FLYER spacecraft which will carry the
Spartan Packet Radio Experiment (SPRE) in early Jan. 1996 are now online at:

http://sspp.gsfc.nasa.gov/sp206.html

SPRE is a 2m packet "easysat" which will be a test of the usefulness of
real-time downlinks of space-based GPS positions as well as using APRS (tm)
systems to digipeat terrestrial locations through LEO spacecraft.

The Spartan 206 spacecraft is a free-flier which is deployed from the
Space Shuttle payload bay during mission STS-72, and left on its own for about
46 hours. After that time, the Shuttle picks up the Spartan and returns
it to earth.

For more information on SPRE, go to WWW URL:

http://w3eax.umd.edu/spre.html

How about 10 GHz WBFM? I've heard of people visiting people who
service burglar alarms and getting a whole bunch of 10 GHz Gunn
diode oscillator/mixers for free (as part of broken motion sensors).
For low cost receive, you can hook up an FM broadcast receiver. For
transmit, you can power the Gunn diode with LM317T regulator that is
modulated with audio. Not recommended for use on New England mountaintops
where you can see FM broadcast transmitters, but enough to have lots of fun.

> meter FM with an HT. Nothing against 2 meters, but hey...ya can't work

> getting to know all the local hams, though.

Why can't you work DX on 2 meters?
Don't W5UN and KB8RQ have DXCC on 2 meters?
How did they manage that without working any DX?

Zack KH6CP/1 zlau@arrl.org
Who thinks that 300 miles on 10 GHz counts as DX

: FM (wide) position and attenuating the signal doesn't seem to help.
: I've heard better audio from $30 AM/FM/TV portables....
:
: Any comments or suggestions?

On the R-7000 there are a total of 3 wideness filters. You get to select two of the three from the FM / FMn switches on the front. I suspect you are switching between the narrow (5khz) and medium (whatever that is), and not getting the wide (100khz) needed for TV sound. I expect you have the same problem receiving broadcast FM too.

There is a switch on the back of the unit which selects whether the front panel switches pick narrow/medium or medium/wide. It should be in the upper position for wide band FM.

If that's not it, I seem to remember that there is a factory modification available for some sort of distortion problem seen after the unit's been on for a while.

Good luck,

Greg KO6TH

3676. CW - complusive/obsessive dream come true?

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-13 00:00:00 UTC
From: charles1@netcom.com
Message-ID: <charles1DJJoCp.F5D@netcom.com>
Source record: 233963

I've been learning CW for past few months and have come to some conslusions. CW seems to cultivate a complusive/obsessive behavior. I imagine compulsive/obsessive types become engulfed in the CW hobby.

CW also involves somewhat of a ritual. Everytime you change bands you have to tune the radio, then tune the tuner, and then on to the repetative CQ CQ CQ. This type of repetative ritual is part of the obsessive addicting nature of CW.

Is CW a haven for compulsive/obsessive people?

Instead of washing their hands 50 times a day, or constantly checking doors to see if they are locked .... these people are hammering away CQ CQ CQ all day long?

3677. Radio software for Macs?

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-13 00:00:00 UTC
From: Bruce_Kay@Brown.edu
Message-ID: <Bruce_Kay-1312951716560001@uhuru.cog.brown.edu>
Source record: 233964

Does anyone know where one can get (free or otherwise) radio software, such as logging, antenna design, and propagation programs, for Macs? I know that there's lots for PCs, but I hate PCs, since I have to deal with them (from the board level on up to application and networking software) at work, and when I get home, I use Macs.

Tnx in advance, e-mail me or post as desired.

73,

Bruce, N1LLT

3682. Microham Logging Program

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-13 00:00:00 UTC
From: algollom@interlog.com
Message-ID: <4amkh2$6te@steel.interlog.com>
Source record: 233969

I found a logging program called Microham and am rather impressed with it. It's an older shareware program (1992). I was wondering if anyone is aware of a more recent version and if it obtainable from the internet.

Any information would be appreciated.

Alan VE3XAG

>from the past five years for that matter.

Packard Bell is not known for quality. There machines have some of the highest rate of repairs in the industry. The higher the quality, the lower the instances of repair. The reason Packard Bell offers "value" (your terms, my term would be low price) is because their quality is not up to other manufacturers such as Compaq, IBM, and HP. Like anything else, you get what you pay for.

actually Drew you did. You stated you had worked the world on 5 watts. I remember the post because a few of us DX types tried to figure how to do it at this point in the solar cycle on 10 meters (assuming you were running your legal license class and assuming (from your posts) that you were not engaged in CW or any other mode other than SSB. Packet does not count.

I have a fairly good setup both in the house and mobile and for the life of me, i can't get past a couple of skips on 10 meters.

Curious as how you "Worked the world" on 5 watts

I'll say it again: this is NOT, repeat NOT, about the code. This is a discussion of licensing should all the code requirements be REMOVED.

>Now that I think about I feel
>insulted that you think because I do not wish to upgrade that I have
>nothing to contribute to this hobby.

This is silly. I'm sure that there are people who can't even pass the current Tech written who feel they have something to contribute to amateur radio. Should we elimate all testing and just substitute an oath "to contribute"?

> Bottom line is that I feel that if
>you let folks in to the hobby and encourage them it will privide more
>incentive that requireing them to advance by time limiting their entry
>license. You know that old honey verses vinager thing.

Five years is a lot of honey. I guess you believe the old Novice limited-time system, through which so many of us entered amateur radio, was also insulting and counterproductive. That would be an interesting proposition to try and prove.

From: ham@w3eax.umd.edu
Message-ID: <4anaos$q78@cville-srv.wam.umd.edu>
Source record: 233976

True or false:

ELECTRICAL ENGINEERS:

1) As an Electrical Engineering major, I needed to know English.
2) As an Electrical Engineering major, I needed to know how to write.
3) As an Electrical Engineering major, I needed to study English lit.
4) As an Electrical Engineering major, I needed to minor in English.

For me, numbers 1 and 2 were true, 3 and 4 were false. I showed an interest in neither #3 or #4. I didn't learn 'em. But I had to learn English, and I had to learn how to write effectively.

ENGLISH majors:

1) I had to study at least one course in college-level mathematics.
2) I had to take at least one class in Pre-Calculus.
3) I had to study Calculus.
4) I had to study Complex Variables and Fourier transform theory.

Most English majors didn't have to take tons of math. It wasn't pertinent, although a MINIMUM competency was necessary.

****

So what does this have to do with Amateur Radio? Lots.

We naturally concentrate and focus our energies on what we like and are good at doing. I don't practice waterskiing because I don't live near a lake, and I don't have the prequisite balance. I do, however, enjoy woodworking because I'm pretty good at it, and I enjoy it. I'm an Electrical Engineer because I have a mind for it; while not a poor writer, I don't really like writing, and I HATED English lit in high school.

****

The proposal? A BASIC license, covering digital, phone, and CW (5 wpm) as a minimum competency exam. Beyond this, if you want more spectrum for operating in the voice modes (FM, SSB, AM, etc.), take some tests focusing on that PORTION of the amateur radio service. Like CW? Want more bandwidth? Take a CW exam, including a written exam. Prefer digital? Study up on Pactor, Amtor, Packet, RTTY, and take a FOCUSED exam.

Essentially, pick an area of interest, study it well, and go and take the exam, which would be FOCUSED on a single area of interest (pick from DIGITAL, CW, and PHONE).

****

This would achieve a population of hams with a basic competency in
all disciplines, but folks wanting to really get into the digital
modes (yes, I know, many TNCs can do CW) could focus on ONLY that
portion. They would be restricted to a certain part of the band,
and the population would be able to study EXACTLY what it wanted to.

Yes, I know, I know, there would be problems with callsign groups
and other junk, but something like this COULD and WOULD work with
some work. No more "I shouldn't HAVE to do 13 wpm to use 20m."

: you support such things? If so, do it RIGHT OUT IN THE OPEN! Dont hide
: or be coy...

Erik, you are obviously not among the many thousands of hams who have had the dubious honor of actually hearing WA4D on HF. He *does* do it right out in the open, all the while openly daring the FCC to do anything about it. He even identifies (WA4-*Dog*) regularly and (amazingly) proudly. The profanities, of course, I would not repeat here. But rest assured, his comments here on the net are pretty mild and sane compared to his on-the-air antics. I could only stomach listening to him for a short time, but in that time I learned that he hates and will not talk with:
Anyone without an Extra; kids; anyone who has not served in real combat; anyone from South America; "foreigners" in general...the list goes on. His greatest pleasure appears to come from shouting down anyone fool enough to take issue with him on the air.

What bothered me the most, however, was that he appeared to have a rather vocal cult following who delighted in joining in.

To see this person accuse ham radio of being "racist"
and rail against "intolerance" is ludicrous. Indeed, it is people like WA4D that make HF SSB often appear to be a wasteland, and keep those who can't stomach his behavior down on CW where such faldercarp is quite rare.

Amazing.

Greg

>Steve, Wa2NHZ

Ummmm...err.....CB? Kicker back....:-)

Seriously, I don't think that we can hold an amateur license up beside an automobile operator license for comparison of skill requirements. Amateur radio isn't the communications media for the masses, and I don't think it should be tailored as such. We're supposed to be a technical group. That said, the exams should be technically oriented. I don't see the problem with CW. It's still a very popular mode, probably more so for those wishing to escape into a most polite amateur environment. No...everyone in town won't have a ticket, but nothing says that we'll dry up and disappear if they don't. I still don't quite buy the theory that we _have_ to have a zillion licensees to maintain our status.

The ARRL have gone to bat for us for years to maintain our spectrum. We didn't give tickets to everyone who complained about not having enough time to study code, and we didn't teach ham radio classes on every street corner with flash cards. Holding an amateur radio license meant something to a prospective employer.

I think we're shooting ourselves in the foot by constantly deregulating our licensing process and giving everything away for little to no work. I don't have a problem with the new licenses as they stand now...but enough is enough. If we are _forced_ to eliminate the CW requirement altogether, I think the written exam should be a serious exam. No printed q&a "study" guides. Draw circuits, design stuff, fix things, posses a real RF electronics skill.

But all in all...I think there are many who do not want to eliminate the CW requirement. That's what the FCC says, it's the same thing reported in other countries. If those who do not want the CW requirement eliminated (when and if it becomes an issue) stick together, write letters, circulate petitions, etc...CW will stay.

It's not important whether or not the Coast Guard uses it, if shipping companies use it....WE use it, by droves. Check with Vibroplex and Bencher...their sales are at an all time high. It's considered a skill which is unique among radio amateurs, one that requires patience and practice. How many qsl cards and amateur plaques have a telegraph key

engraved...It is a prominant figure in our hobby. We don't have to toss it aside if the majority of the amateur fraternity wants to retain it.

Not instant gratification, but pride in persistance and study.

I feel an amateur needs to have a certain level of knowledge, technical in particular, to be awarded a license. However, I also believe that everybody benefits if we have a time-limited entry-level license, even though such a license does not test for the requisite knowledge. The current Tech written test should be recognized for the anomoly that it is, in that in 1987, for no good reason I can fathom, the Tech written = General written connection was broken, and the Tech written was reduced to a trivial exercise. This was a mistake and it should be corrected.

>After all isn't enjoyment of the hobby what it is all about?

Except that amateur radio is more than just a hobby. How many hobbies have a "Basis and Purpose" written into Federal regulations, as amateur radio does?

I didn't think of the Schwarzenegger or Iron Man type of physical
fitness, more a mixture of physical and *mental* staying power.
In this kind of marathon you have to keep up concentration for
the whole duration of your participation so maybe Chessplayers
are a better comparison.
You can't perform well (as single OP) in a full weekend's contest
if you start having problems copying code after some hours.

To my mind there is a direct link between physical and mental
staying power though I know some top contesters that don't
look like they did any kind of sports.

>I want to hear from "serious" contesters who run marathons or triathlons.
>
>Al Gerheim, N4QN

Yes, I did marathons, real ones, and I do other regular sports
(Volleyball). I think this helps you to stay on the scene.

answer to above:

How do I benefit? I already have the skill and knowledge. If I were to learn code I would not use it, at least I am being honest. The only one it would benefit it seems would be you. If the justification is my contribution to "the radio art" it could be done just as well where I already am. I do not have to have an Extra license to contribute. Now that I think about I feel insulted that you think because I do not wish to upgrade that I have nothing to contribute to this hobby.

Again I repeat that this is a hobby despite having a stated purpose and basis written into Federal regulations. Most of us do so for the satisfaction of providing community service and the enjoyment of belonging to a community of people who enjoy the same hobby. It is still a hobby, perhaps in some respects a more serious hobby than most, although when flying some of my high power rockets it gets pretty serious. But we do it because it is FUN first, the rest follows. In fact how many of us would stay if it wasn't fun?

And while I am at it I believe that part of our stated purpose, ie . to provide emergency communications is ,unfortunatly, becomming less needed as technology improves. (a fact that I am not estatic about) Cell phones reduce the need for our type of emergency service. Thank goodness for health and welfare traffic.

I direct your attention to 97.1 part c, since you keep refering to it. . It says to provide for encouragement , and rules that provide for the advancement of skills. (not a full quote for brevity) That is good, but it does NOT say that you HAVE to advance. Bottom line is that I feel that if you let folks in to the hobby and encourage them it will privide more incentive that requireing them to advance by time limiting their entry license. You know that old honey verses vinager thing.

This seems to be a singularly pointless exercise. I am at a loss to understand what possible "research" benefit can be derived from collecting a QSL card from every county in the USA ... especially if no actual radio contact has been involved.

However, on a more positive note, if you wish me to bequeath my entire lifetime QSL collection to you in my will, please let me know. I have over 40,000 cards dating back to 1960 (back to 1958 if you include the SWL ones). Otherwise, they will simply amount to about 0,5 tonne of waste paper for recycling! I am sure they would be of no value to anyone else after I am gone.

68HC11 with embedded Forth. Takes about 10 lines of Forth. Has
serial port. Has parrallel port with centronics printer support logic.
Awesome little chip.

Just two years ago I replaced the 1013 in my Radio Shack TRS-80 Model III.

They are still rather easy to obtain.

Cheers,
Phil

I have two KPC-9612's on the air, one running as a NETROM. The TNC's are great. The only problems that I have are finding raios that are really 9600 Baud ready. Alignment of whatever radio you choose is important. We resorted to buying AEA's Deviation meter to align our Kantronic TNC and radios. It was well worth the cost.

We are running ALINCO 1200TH2's, a YAESU 736, 2500's and
ICOM 281's here in Minnesota. I was also suprised to see how well the new little rockbound MFJ transceiver will do. If you experience intermod just use a cavity filter in front of the MFJ. Path is critical for 9600 so be prepared to put better antennas higher and running a bit more power for long links. Hope this helps

As a now-and-again contester, I can assure you the experience has never done much for my mental or physical wellbeing! I would equate contesting with a couch-potato marathon, not a 10-k run. Alas, many of the contesters of my acquaintance look as though they're courting serious cardiac problems what with drooping guts and quivering chins whacking them in the air when they turn too quickly to change antenna direction. Not all, of course -- I'm an exception. And then there's all that RF floating around, posing a serious threat to your sperm count. The ideal way to contest would be from the seat of an exercise bike while ingesting tofu burgers and spring water with a twist of kumquat. Right!

It's time once again for Jerry's "bitch about the ARRL" article. Before all of you who love the ARRL with complete devotion jump on me, this problem isn't something that could be corrected my my taking a more active part in the ARRL volunteer half. I like the ARRL myself, but that doesn't mean I can't criticise it.

Now then.

Today I got in the mail a renewal postcard from ARRL for my subscription to QEX. My subscription expires in April.

The card says that my subscription expires "shortly", (in 4 months) and that I should "renew today to insure [sic] prompt delivery of the next issue" -- no doubt, to be delivered "shortly" according to their definition. I would like my November issue to be delivered sometime before my subscription expires.

Yes, yes, I know that Jon Bloom et al. are having troubles getting QEX out, and I'm not bitching about that now. I'm complaining about the _chutzpah_ of ARRL to put out such a postcard with QEX running so far behind.

In any case, how come they need 4 months lead time to process my renewal? Granted, the interest on the $24 won't amount to much, but it's something.

It could be worse, though. Don't even get me started about the APS, which wouldn't let you join any time of year except renewal time in July.

Now I feel a little better. Sorry if I got spleen all over you.

: : In any case, how come they need 4 months lead time to process my renewal?
: : Granted, the interest on the $24 won't amount to much, but it's something.

: Don't know about QEX, but most magazine publishers state that they require
: 6-8 weeks to process a new subscription or, worse yet, a change of address.
: Since I work with computer systems, and most publishers are heavily
: computerized, this seems a bit difficult to understand.

The computers don't process and enter the data, people do. Since non-profits like ARRL don't have people idling at their desks waiting for your renewal to arrive, subscriptions are handled periodically (pun intended) when that pile on their desk is large enough to pull them away from other business.

Where I used to work, the data and payments had to be sorted, batched, then sent to the fulfillment agency that entered it into the computer, process the data, then print the labels and ship them to the mailhouse. Don't forget to allow delays for illness, USPS, bad wx, the mailhouse, the printer, other deadlines, ...

A truly automated system would require you (or your computer) to electronically submit subscriber and payment info, followed by electronic transmission of your subscription.

Darn those carbon-based lifeforms, slowing down our modern life style and standing between us and immediate satisfaction! :)

[ANARTS - Australian National Amateur Radio Teletype Society]

A.N.A.R.T.S. News Bulletin 888 10th December 1995

ANARTS BROADCAST DATES

ANARTS WILL HAVE ITS LAST 1995 BROADCAST ON 17TH DECEMBER, AND WILL RESUME ON 7TH JANUARY 1996, GIVING ALL CONCERNED A WELL-EARNED BREAK.

WE WILL HAVE A GUEST EDITOR ON 17TH -- COL VK2CTD -- AS HE IS PRESIDENT OF ANARTS, WHO BETTER TO DO THE LAST BROADCAST FOR 1995?

YOUR REGULAR EDITOR PAT VK2JPA WILL BE ON LEAVE AND I TAKE THIS OPPORTUNITY TO WISH ALL THE COMPLIMENTS OF THE SEASON AND MAY ALL YOUR WISHES TURN UP IN YOUR STOCKING.

CHEERS DE PAT VK2JPA

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(01 DECEMBER - 07 DECEMBER)

ISSUED 08 DECEMBER

SUMMARY

Date 01 02 03 04 05 06 07
10cm 73 73 73 73 74 74 74
A 17 14 9 18 3 4 (4 estimated)
T 4 -11 7 23 -13 -9 18

SOLAR ACTIVITY WAS VERY LOW THROUGHOUT THE PERIOD.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS MAINLY QUIET TO UNSETTLED 1ST TO 4TH, AND 7TH DECEMBER, WITH A BRIEF ACTIVE PERIOD ON 1ST AND 4TH. OTHERWISE THE FIELD WAS QUIET.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE NEAR PREDICTED MONTHLY VALUES 1ST, 3RD TO 4TH, AND 7TH DECEMBER; DEPRESSED,TO 30 PER CENT ON OTHER DAYS. SPREAD F DURING LOCAL NIGHT WAS NOTED ON 1ST TO 3RD, AND 5TH TO 6TH, AND SPORADIC E WAS OBSERVED 1ST TO 4TH DECEMBER.

FORECAST (08 DECEMBER - 14 DECEMBER)

SOLAR: VERY LOW.

GEOMAGNETIC: QUIET

IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES.

COURTESY OF IPS RADIO AND SPACE SERVICES

UNFORTUNATELY, THE VK2SG RTTY DXNOTES HAVE NOT MADE IT THROUGH THE CHRISTMAS CRUSH IN TIME FOR THIS BROADCAST, BUT WE HAVE A OHIO DX BULLETIN THAT MIGHT BE OF INTEREST ...

FT5W, CROZET ISLAND. Samuel/F5IJT and Jean-Jacques/F5SZK will arrive on Possession Island (46 S 51 E, Crozet archipelago) on Decmber 14th, and will be signing FT5WE and FT5WF, respectively. They hope to have two stations active for 12 months. Activity will be on CW, SSB, and they hope to be active also on RTTY, SSTV, Packet Radio. Suggested frequencies:
CW - 3505, 7005, 10105 & 10115, 14005, 18075, 21005, 2489, 28005 kHz
SSB - 3792, 7045, 14145 & 14245, 18145, 21245, 24945, 28445 kHz
A beacon will transmit on 6 meters using the callsign FT5WE. QSL FT5WE via F5GTW, Touyeras Claude, 23 rue des Chardonnais, cite de la Diete, 86130 Jaunay Clan, France. QSL FT5WF via F5IZK, Loiseau Andre, ecole de Garrabet, 09400 Garrabet, France.

JD1, OGASAWARA. Eiji, JQ1SUO will be active as JD1/JQ1SUO between December 23th and January 3rd. QSL via CBA.

SPECIAL EVENT STATION. On December 6th, the 70th anniversary of the first amateur radio contact in Poland performed by the Polish radio amateur Tadeusz Heftman, call sign TPAX, and a Dutch amateur Ten Kate, call sign N-OPM, will occur. To commemorate this event, the editor of the Radioamateurs Bulletin "QTC" and the HQ of the PZK will put in operation a special amateur station with the call sign SP0TPAX. This station will be on the air from December 1-15th, on all HF bands with modes CW, SSB and RTTY. QSL cards are to be sent via SP2FAP or directly to the "QTC" Magazine address (PO Box 18, 82-312 Elblag 13, Poland).

SPECIAL EVENT STATION. The VK1 Division of the Wireless Institute of Australia will activate special event station VI100GM, from December 5-11th, to commemorate the 100th anniversary of Guglielmo Marconi's first wireless experiments. Activity will be on all bands using RTTY, SSB, and CW. As part of the commemoration they will be demonstrating amateur radio

and EME to engineers and university students at Canberra University using a newly operational dish. The EME demonstration is planned for 11 December from 1800-2330z on 70cm (and possibly 23cm). QSLs should be sent to: VI100GM, GPO Box 600, Canberra, ACT, 2601, Australia.

VK0, MACQUARIE ISLAND. Warren, VK0WH, arrived on Macquarie Island on November 18, making the trip on short notice. Bob, NM7M, reports that Warren will have to use some commercial gear at the station with a synthesizer instead of a VFO. His operating frequencies will be 14130 kHz for SSB, 7010 kHz for CW and 3570 kHz for SSB. While Warren does not give any operating hours, he did indicate that he will have a regular sked with VK4ATS at 1000z on 14130 kHz, starting December 10, and indicated that others are welcome to call in. Warren will be advised to try to listen up the 20 meters band, should he try for contacts with stateside stations. Warren's original intention was to have a very low key amateur radio operation because he won't have much free time. He will be on the island for a full year, so perhaps he will be able to do more than originally planned once the routine of work settles in. Warren indicated that he may not be able to get any QSLs out for quite a few months or possibly until he returns home, so those who need VK0 for DXCC will have to be patient. Warren was heard this past week on 7009 kHz on 1130z. (ed. The above is part of an edited excerpt orginally written by Bob, NM7M.)

FT5W, CROZET ISLAND. Samuel/F5IJT and Jean-Jacques/F5SZK will arrive on Possession Island (46 S 51 E, Crozet archipelago) on Decmber 14th, and will be signing FT5WE and FT5WF, respectively. They hope to have two stations active for 12 months. Activity will be on CW, SSB, and they hope to be active also on RTTY, SSTV, Packet Radio. Suggested frequencies:
CW - 3505, 7005, 10105 & 10115, 14005, 18075, 21005, 2489, 28005 kHz
SSB - 3792, 7045, 14145 & 14245, 18145, 21245, 24945, 28445 kHz
A beacon will transmit on 6 meters using the callsign FT5WE. QSL FT5WE via F5GTW, Touyeras Claude, 23 rue des Chardonnais, cite de la Diete, 86130 Jaunay Clan, France. QSL FT5WF via F5IZK, Loiseau Andre, ecole de Garrabet, 09400 Garrabet, France.

JD1, OGASAWARA. Eiji, JQ1SUO will be active as JD1/JQ1SUO between December 23th and January 3rd. QSL via CBA.

VU7, ANDAMAN ISLANDS. G0WAZ reports that Jim Smith, VK9NS, plans to return to Andaman island in February 1996.

XZ1A UPDATE. OH1EB has left Yangon with some 9000 QSOs, 3800 in the CQWW CW Contest. The station remains in place with more

activity expected in January by OH1NYP and OH2BH, concentrating especially on 160/80 and the areas of the world with the most difficult path (central and eastern North America). All XZ1A QSOs up to this point --more than 25k-- will be compiled into one database. QSL labels will be printed soon, with cards going out by early January. QSL via JA1BK. (Excerpt from a Tim, KJ4VH, press release)

YJ, VANUATU. Daniel, FK8FU, will be active on all bands between December 18 and January 1996. QSL via N5AU.

ZL8, KERMADEC ISLAND. The December issue of QST reports that Ron, ZL1AMO, is involved with a group of ZL operators who plan to be on the air from Kermadec in May 1996. Landing permission has already been granted, and there are no operating restrictions. The only problem is raising funds. The operation will cost about 30,000 US dollars.

ZK1, NORTH & SOUTH COOK ISLANDS. The DX News Letter reports that Trond/LA1TV, Ingun/LA1LIA and Oddvar/LA9JX want to work as ZK1ATV, ZK1LIA and ZK1NJX from Aitutaki (OC-083) from December 9-14th. They will use the same calls when they worked from Manihiki Island North Cook (OC-014) between December 28 and January 4th (1996). Suggested Frequencies: CW - 3505, 7005, 10105, 14005, 18075, 21005 kHz / SSB - 3795, 7045, 14195, 18145, 21295 kHz. QSL via homecalls.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit.

COMING EVENTS

DECEMBER 9TH-10TH TARA RTTY SPRINT

JANUARY 6TH-7TH ARRL RTTY ROUNDUP

FEBRUARY 10TH-11TH WW RTTY WPX CONTEST

:
: Sounds good, but let's allow digital as well. I have yet to use
: CW for any of the packet stuff I do.

I think the original author is trying to imply a way of letting people "get their feet wet", while still giving them a reason to know code. Adding digital priveleges would be just giving the license away! I am opposed to fully abolishing code requirements, because it would make people lazy. Besides, cw is fun, and really not that hard to learn!

Not true. I'm thinking about buying the Kantronics entry level kit. It's $99. Assembled $150. Has on-board voice ID. Anyone know if these are any good? Does the kit go together well?

You may be interested in my new web site. I have articles there that may
be re-printed in club newsletters. I plan to be adding a new article
approximately once a month. Just getting this started, so hope it is
beneficial.

Walt Davidson G3NYY replied:
> This seems to be a singularly pointless exercise. I am at a loss to
> understand what possible "research" benefit can be derived from
> collecting a QSL card from every county in the USA ...
Walt, you are right, there is little research value in US counties, USSR oblasts etc. QSLs. But every collection aims to be complete, and you would be surprised to see how delighted US hams are when they visit our USC *exhibition*. And, just to give another example, quite recently a *publisher* asked for a QSL from "Osmond County/dissolved" for an article in his magazine - and we were happy to comply.
Research is being done in many other ways. We trace the amateur radio history of many countries; we can provide the biographies of well-known and long-forgotten hams; we provide documentation on all the major events and developments... And we collect QSLs because the "ordinary" one of today is the rare one of tomorrow, and many of the rare ones of yesterday are lost forever.

> However, on a more positive note, if you wish me to bequeath my entire
> lifetime QSL collection to you in my will, please let me know.
You and all others are most welcome.

QST de W1AW
DX Bulletin 62 ARLD062
From ARRL Headquarters
Newington CT December 14, 1995
To all radio amateurs

SB DX ARL ARLD062
ARLD062 DX news

This week's bulletin was made possible with info provided by KB8NW, the Ohio/Penn DX Bulletin, the DX Bulletin, QRZ DX, G4BUE, JA3JM, K4UTE, the Yankee Clipper Contest Club PacketCluster network and Contest Corral from QST. Thanks to all.

AFGHANISTAN, YA. Dick, K4UTE, reports that Yan, F5TCN, the QSL Manager for YA9XL, says that he has no logs at this time. The op of YA9XL is Oleg, UT9XL, in Kabul. Oleg appears to like 7005 kHz around 0100z and has been heard on 20 meter CW between 1400 and 1500z. Yan gives the following address to QSL which is not the one in 1996 callbook: Yannick Chilliau, 14 Route d'Harnes, F-62880 Annan sous lens, France. No documentation for this operation has been received by the DXCC Desk.

THAILAND, HS. Jim, KM4P, will sign HS0/KM4P through December 15, mostly on 20 meter SSB, with some 40 meter activity. QSL to PO Box 12141, Arlington, VA 22219.

MACQUARIE ISLAND, VK0. Warren, VK0WH, continues his operations from here with SSB on 14130 kHz at 1030z and CW on 7010 kHz at 0930z.

SOUTH ORKNEY ISLANDS, VP8. Ernesto, LU1ZPF and Hector, LU6LO, are QRV mostly on CW, but with some SSB. QSL them via LU6EF, the buro or direct.

SOVEREIGN MILITARY ORDER OF MALTA, 1A0. This Italian operation will sign 1A0KM through December 17, on all bands and modes, including satellites. QSL via Francesco Valsecchi, IK0FVC, Via Bitossi 21, 00136 Roma, Italy.

TOGO, 5V7. Look for Dave daily on 14156 kHz at 2130z. QSL via AB7BB direct only.

KERGUELEN ISLAND, FT5. Jean Jacques can be found most days on 14136 kHz around 1600z.

MAURITIUS, 3B8. JA3JM will be active December 18 to 26 as either 3B8/JA3JM or 3B8/AA5K, on all bands, including AO10 and 13. QSL to Akio Shimizu, 3-6-22 Kasugaoka, Fujiidera, Osaka 583, Japan.

MAYOTTE, FH. Akio then moves on to Mayotte as FH/JA3JM from December 27 to 31.

REUNION, FR. Before going home, Akio stops in Reunion from January 1 to 5 as FR/JA3JM.

GREENLAND, OX. Look for OX3XR Wednesdays on 1825 kHz between 2200 and 2300z. Also, check 3503 kHz around 1030z. QSL via OZ3PZ.

NIGERIA, 5N. 5N0OBA, 5N0PYL, 5N0T, 5N3ALE and 5N9WKO will sign 5N4OTB from Bonny Island from December 23 to 28. They will be active on all bands SSB and CW. QSL via F2YT.

TANZANIA, 5H. Giovanni, I5JHW, will be active from January 1 to 9, signing 5H1HW on all bands with CW, SSB and RTTY. QSL to his home call.

GUAM, KH2. Ray, WH6ASW, works as a teacher on Guam and will be there for two years. Look for him to start operations as WH6ASW/KH2 very soon. QSL via G3EZZ.

WAKE ISLAND, KH9. The Dateline DX Association will be activating Wake Island January 24 to 31. The call sign to be used will be announced shortly before commencing operations to minimize pirate activity. Operators include AL7EL, WB2DND, KC7V and K4HQI. Activity will be on all bands, with an emphasis on RTTY and satellite, as these modes have never been activated from Wake. QSL via AL7EL, Tom Harrell, 27257 Nellis Road, Evans Mills, NY 13637

TURKS AND CAICOS ISLANDS, VP5. Koji, JJ2QEH, and Mack, JJ2QXI, will be active from February 3 to 9 at VP5JM's rental shack. QSL JJ2QEH to Koji Iida, 1866-2, Oota, Minokamo, Gifu 505 Japan. QSL JJ2QXI, Masahiro Mori, 1268, Atobe, Mugegawa, Mugi, Gifu 501-26 Japan.

EASTER ISLAND, CE0. JA7AYE and JA7XQV, will be active mainly on CW as XQ0/JA7AYE between December 30 and January 3. QSL via JA7AYE.

VP8, SOUTH GEORGIA ISLANDS. The NPDXG reports that VP8CGE and VP8CID will return to this island soon.

ANTARCTICA. Palmer Station, KC4AAC, operator Mark makes phone patches and operates every Thursday night anytime after 0000z. He is more than willing to hand out QSOs between phone patches and after he has completed them all.

EM1KA is active from the Ukrainian research base Vernadsky around 14195 or 14265 kHz after 0300z. This station has also been heard on 1832 kHz around 0350z.

SPECIAL PREFIX. During 1996, Austrian stations will be allowed to use the special prefix ''OEM'' to celebrate their 1000th anniversary.

SPECIAL EVENT STATION. The Port Adelaide Radio Club will use the call sign VI5SUB to commemorate the launch of the submarine FARNCOMBE in Adelaide, South Australia, December 15 and 16 on 21200, 14200, 7100 and 3600 kHz.

QSL NOTE. Dick, N7RO, says that he is not the manager for EK6LF, EK7M and EK8WB. Please do not send him cards for these stations.

>Anyone know if these are any good? Does the kit go together well?

Have not heard of Kantronics entry into the market. Bad words I heard about
both GLB and Hamtronics controllers (overpriced, underfeatured, etc.)

For $139 (I think..) the RC-100 from Micro Computer Concepts gives you the
basic features you wanted (CWID, ability to expand to voice ID, DTMF control
of basic features, and 1 radio link with TTL logic lines (16??) and remote
tx/rx on off via DTMF.
No phone patch, wouldn't be real pretty to interface either- that would be the
RC-1000 for $239.

But if you get over the sticker shock, Link Comm products are the way to go.
RLC-1 goes for $199- again no autopatch but everything else *and* an RS-232
connection for ezy programming.

Hi,

I'm a No Code Tech, and I'm in the prossess of upgrading to my General. I have been interested in Ham Radio since my Uncle showed me his rig when I was 6years old. It has taken me 20 years to finally get my Ticket. The only reason I didn't get it earlier is because of the 5wpm code test. I don't believe that they should abolish the code test but I do believe that a No Code Test for an ENTERY level licence is a good thing.

Prior to getting my Ham licence, I played around with SSB CB. I enjoyed it, However, it was very crowded. Giving the No-Codes the narrow band with of the 10m band with limited wattage would give new Hams a taste of the HF spectrum.(without being able to work world wide.) This would possibly encoruage many people to upgrade. I'm upgrading becuase I would like to start playing with QRP.

I'll get off my soap box now.

Thanks
Eric E. Scott

I've used a 9612 for over a year without a single problem. I am using
a Motorola MVP for the VHF radio (1200) and a Yaesu FT5100 on the 9600 side.
We don't have much 9600 here, but what there is seems to work fine. The
TNC and radio are on 24hr/day and there hasn't been a single glitch

I think the most amusing point is that Amateurs appear to be so
opinionated... Always throwing in their 20c worth......Annonymity
gives them such a thrill, acid pens and flames thrown from the comfort
of their shack !!

You never see a "middle of the road" type discussion. It is either
black or white... Flames and daggers....

You find the Data Police on ALL bands, enforcing their views on
others. Picking on the newcommers and the weak. Their 15 minutes of
GLORY starts every time they set foot in their shack !!

By for now.......
Pete..vk2yx

Your first criteria sets the pace...NO rptr controller on the
market is UNDER 150 dollars...

If you want a good expandable conntroller, look at the LINKCOM
series of RLC systems....the RLC 4 and 5 are the lowest cost
models and can support DVR (for use on IDs), links and autopatch

I do know anything about this online magazine. However, we are putting out a free online ham radio magazine and are getting as many as 400 visitors a day so far. We feature original stories, newsletters, and real-time propagation reports and solar data, plus real-time auroral radio conditions. Take a look at http://www.accessone.com/~vbook/hronline.htm.

We also have real-time disaster communications data (world wide weather conditions, satellite photos and live earthquake data).

We are doing this as hobby and having a blast. You can write us at vbook@vbook.com.

>Ah, but it used to be a sort of "fraternity"..probably something you

You mean, with goldfish-swallowing and group masturbation and the whole bit?
Won't Burt Fisher be surprised!

[...ahh, nostalgia, walking uphill, both ways, to a surly FCC tester with a
cigar...deleted.]

>and have an understanding of basic circuits and operation..Yup
>amateur radio is going down the tubes..mainly because of those
>that don't feel it's worth any "devotion" and "sweat"...I have lost

??? It's gone down the tubes for the same reasons that everything else has
gone down the tubes. Not for lack of devotion, or sweat, but because of a
general change in the attitude that people have for one another: screw the
other guy.

>lots of respect for ham radio, because of those that feel ham
>radio doesn't deserve any devotion or that fellow amateurs are
>are not part of a special group...And as I and others lose our

I wasn't aware that "devotion" or "special group" were part of the Amateur
Radio _Service_ charter in 47 CFR 97.

>respect of amateur radio, you can expect more jamming, cursing
>etc..because it will have transformed itself to the lower forms of CB.

You have it backwards. Because amateur operators have let the bands slip by
tolerating anti-social behavior, the service has lost respect.

>Yup, Just like Jerry Altzman said, he doesn't think it requires any
>devotion...Yeah Jerry I guess you kinda made it so it's like renewing

If the FCC doesn't think it requires "devotion" why should I? I value my
license for what it allows me to do, not because I plowed in XX hours of
studying to pass the exams.

>the registration on a car..

Renewing my license is considerably less onerous than car re-registration.

Chinese amateur home licences

First home station licences for China amateurs

Individuals can now obtain amateur licences for home station operation in China where previously only club station operation was permitted. Examinations have already been held and the first home station licences issued.

There are four licence grades, distinguished by the callsign prefix. The top grade has the BA prefix and licencees can use five hundred watts on all bands permitted by the Chinese authorities. The next grade can use 100 watts on all bands and has the BD prefix. No licences have been issued as yet. The third grade is allowed 10 watts, and operation is permitted on some bands only. The fourth grade requires no examination but can only operate on the one frequency and mode - 29.5 MHz FM - with home-made equipment. They use the BH prefix and the licence is for twelve months only after which operators must upgrade.

Well-known Chinese amateur, Cheng Ping now sports the callsign BA1HAN. The BY prefix is still used by Chinese Radio Sports clubs while the BZ prefix is used by individuals and operation is only permitted from club stations.

The Chinese have reserved the BT prefix for official event stations.

For this information we are indebted to Wally Watkins VK4DO.

from Federal Media Liaison Officer

Chinese DX Convention

China opens up to Amateur Radio

Amateur Radio continues to develop in China with the recent relaxation of restrictions by authorities over recent years, culminating in the first Beijing International DX Convention, hels over the weekend of the 14th-15th October 1995.

Hosted by the Chinese Radio Sports Association, the DX Convention was attended by delegates from many countries,including Australia, Canada, the USA, Borth and South Korea, Japan, Thailand, Austria, Finland, Great Britain, Hong Kong and Denmark. About 80 local Chinese amateurs attended.

The DX Convention was opened by the China Communications Minister who welcomed everyone and thanked those who had helped the CSRA in its development. "I think this convention will greatly promote the development and communication of Amateur Radio societies", said the Minister. "Amateur Radio in China used to develop slowly but nowadays when we come to realise the importance of amateur radio we will make every effort to promote it in China."

The Minister's welcome was followed by a recounting of the history of amateur radio in China from the beginning through World War II and from October 1949. Delegates from each nation gave a short description of amateur radio in their countries so that local amateurs attending could have a first-hand view of what happens in these other countries.

After the Saturday evening banquet, a talk and slide show on the Hwang Yang Dow BS7H DXpeditions was given. Two special event stations were operational over the weekend of the Beijing DX Convention - BT1DX at the hotel where the convention was held, and BT1X on the Great Wall at Badelang. Significantly the Chinese authorities issued each overseas visiting amateur with the first visitor's licence to operate 2m in Beijing, using the call B/home call. This was recognised as a monumental step for the administration of amateur radio in China, which is controlled by the Chinese Radio Sports Association.

Thanks again to Wally Watkins VK4DO for this information

VK2 WICEN News
VK2 WICEN News

This is supposed to be a quiet time for WICEN exercises, but all personnel should keep their equipment ready for a sudden activation; make sure that your transceivers are working and batteries are cycled. At this time of year, the Four Elementals -- Earth, Air, Fire, and Water -- tend to cut loose (usually more than one at a time), along with the Apocalypse and the Prophecies, so please be prepared.

Next weekend will be the last broadcast for the year, but WICEN bulletins will still continue to be issued via packet radio as the need arises, so could the various regions please keep sending in news.

Those regions wishing to have their activities publicised on this broadcast are requested to get the details to the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to the VK2KFU system itself (AX.25 or TCP/IP), or failing that, to VK2DAA, VK2OP, or VK2GJB.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains each Monday at 8.30pm on 7175 simplex,

Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, the State-wide HF net each Wednesday at 8.30pm around 3610 kHz, Central Coast each Thursday at 8.30pm on the Wyong repeater 7125, and Sydney each Thursday at 9.30pm on the Chatswood repeater 7150/8275.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

Dural Report

Dural Report

Here again is a report on the various activities at the Dural broadcast station VK2WI.

Next weekend will be the last broadcast for the year, so the opportunity will be taken to perform some essential maintenance. As a result, do not be surprised if your favourite repeater or beacon should suddenly disappear; and yes, we are aware of the forthcoming VHF Contest.

Listeners will have noticed that the 10m FM service has been removed; it is hoped to have it back in service by the start of next year's broadcasts.

With any luck, the Divisional TCP/IP station will also be installed, along with a 2m SSB service. In the meantime, if anyone has a 6m SSB transceiver capable of at least 10 watts and surplus to requirements, then we would like to hear about it.

Plans are afoot to improve the evening 80m SSB service by the commissioning of "Big Bertha"...

Finally, broadcast personnel, the Dural Engineering team, and anyone with an interest in the Dural facility are invited to the regular Christmas party next week, following the morning broadcast. As usual, drinks and nibblies will be supplied, so bring your own food.

-- Dave VK2KFU, Dural Engineer

Magazine Roundup

Magazine Roundup

Here again is a summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we discuss the December issues of the various magazines.

"Electronics Australia" wonders about the various proprietary "Pay-TV" standards; Nikola Tesla, crackpot or genius, see for yourself; Neville VK2XV discusses some funny things that happened to the ABC studios during war-time; an active antenna for

shortwave listeners is assembled; couch potatoes can build a four-channel remote control unit, and a remote volume control; yet another power supply module is constructed; and would the real inventor of the "super-het" please stand up.

"Silicon Chip" immobilises your mobile shack should someone try to abscond with it; toroidal power transformers are discussed; the CB-to-80m transverter by Leon VK2DOB is completed; and an interesting approach to radio-controlled models, that of mixing the control surfaces, is discussed.

"Amateur Radio" looks at a low-noise pre-amp for VHF; those with an interest in the DC bands can build an LF receiver converter; those still using CW can calibrate their fist; an innovative way of dealing with TVI is discussed, providing that one is bigger than one's neighbour; a TH3JR's traps are repaired; the Ross Hull VHF Contest dates are given as 27th December to 28th January (presumably the correct year this time, although we still wonder about the 6m rules); there is a basic introduction to packet radio; the FM-828 in repeater service is discussed; "Alf Traegar, the Pedal Radio Man, is reviewed; and a compact 80m loop antenna is described.

"Radio and Communications" discusses whether CW is really necessary; critically-coupled antennas are concluded; the Domain Name System in packet radio is discussed; the usual list of modifications is included; those wondering what the World Wide Web is about can find out; the mysteries of packet radio forwarding are investigated; good reasons for NOT using "power mics" are explained; and the Amateur HF band plans are discussed.

And in something that may be of interest, "Soft Technology" magazine describes: a Web page dedicated to alternative technologies, renewable energy and sustainable development (the Division's page has a link to it); an "active solar" house; converting your car to run on electricity: recycling batteries; a solar garden light; converting your PC to run on 12 volts; the basics of generating electricity; and making your own lead acid batteries. We thank Richard VK2SKY for that last item.

Be listening next month for another summary of the local magazines.

-- Dave VK2KFU

News Briefs
NEWS BRIEFS

There's one more star in the heavens, following the successful launch of AsiaSat-2 from Sichuan Province in western China. The launch marked the start of China's plan to launch 25 domestic and foreign satellites by mid-1998.

AsiaSat-2 carries 24 C-band transponder, with footprints covering Asia through to Eastern Europe, and 9 Ku-band transponders to cover VSAT (Very Small Aperture Terminal) communications throughout southeast Asia.

Sydney Electricity and the Federal Government are funding a program to provide solar power to schools throughout New South Wales.

The University of NSW's Australian Solar High Schools program has recently installed a 1kW "grid-connected" solar panel array at Sydney's Fort Street High School. The demonstration site has a "PV (photo-voltaic) power station, computer controlled display equipment networked to the school computer, and teaching materials".

Over the next two years, Sydney Electricity plans to install 18 similar power projects on commercial, industrial, educational, and residential sites around the state.

SOLAR ACTIVITY WAS VERY LOW THROUGHOUT THE PERIOD.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS MAINLY QUIET TO UNSETTLED 1ST TO 4TH, AND 7TH DECEMBER, WITH A BRIEF ACTIVE PERIOD ON 1ST AND 4TH. OTHERWISE THE FIELD WAS QUIET.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE NEAR PREDICTED MONTHLY VALUES 1ST, 3RD TO 4TH, AND 7TH DECEMBER; DEPRESSED,TO 30 PER CENT ON OTHER DAYS. SPREAD F DURING LOCAL NIGHT WAS NOTED ON 1ST TO 3RD, AND 5TH TO 6TH, AND SPORADIC E WAS OBSERVED 1ST TO 4TH DECEMBER.

FORECAST (08 DECEMBER - 14 DECEMBER)

SOLAR: VERY LOW.

GEOMAGNETIC: QUIET

IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES.

COURTESY OF IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club news: VHF DX Group

The VHF DX Group is currently in the process of negotiating a bulk order for the "No Tune" 1296 MHz transverter kit sold by the VK5 equipment store. Further details will be advised.

The first meeting of the Group next year is scheduled for Tuesday January 16th, 1996 at Amateur Radio House. This meeting will be to finalise the 1296 transverter order, to discuss the group's proposed display at the 1996 Central Coast Field day and to firm up the lecture program for 1996.

During the coming year we will be placing more emphasis on six metres and 23 centimetres. Six especially was rather neglected in 1995 and we will be making amends with lectures and tapes from some of the big guns of cycle 22.

Don't forget the Tuesday Activity Nights on 144 MHz and the Group's Sunday morning net on 146.5 MHz FM starting at 11.00 am.

Finally, the Group would like to thank the WIA for its support during 1995 and wishes the compliments of the season to all listeners to VK2WI.

Submitted on behalf of Richard Soulie, VK2ARS

Club news: Parkes

WAM 95 was held at Forbes last Saturday 2nd december. Amateurs who attended were presented with a series of lectures, which only can be described as superb. Unfortunately attendance was very disappointing, considering the calibre and distance travelled by the speakers and the informative nature of their lectures.

The Parkes and District Amateur Radio Club wish to thank speakers, Bruce carroll, Fred Baker, John Innes and Ian O'Toole and representatives of the WIA, Mike Corbin, Caesar Miranda and Ken Waterman, all of whom travelled considerable distances to attend.

From the Parkes and Dustrict Amateur Radio Club

Club news: Waverley

WAVERLEY AMATEUR RADIO SOCIETY

The next meeting of the Waverley Amateur Radio Society will be held on Wednesday, 20th December. The main item for the evening will describe "The Waverley Society in the 1930s" as recorded on tape by Rod Torrington, VK3TJ, who was actively involved at the time. The venue is the society's premises in Vickery Avenue, Rose Bay (off New South Head Road), next door to the Rose Bay R.S.L. club where a number of members gather for pre-meeting refreshments. Starting time is 7:30 p.m., with doors opening at 7 p.m. Members and anyone interested in amateur radio are invited to come along.

The society is holding its Christmas dinner at the Rose Bay RSL Club on Saturday, December 16th at 7:00 p.m. If you would like to attend, please advise Eddie, VK2BEH, on 327-4118 to assist catering arrangements.

Don't forget that the society holds its weekly net at 7:30 pm every Tuesday using the Paddington 2 metre repeater on 147.025 Mhz.

All are welcome to join in.

--Simon Buxton - VK2EII - Publicity Officer

Club News: Liverpool

LIVERPOOL AND DISTRICTS AMATEUR RADIO CLUB

The Liverpool and Districts Amateur Radio Club will be holding the its Christmas Barbeque on next Wednesday night, the 13th of December. This will be the last meeting of the year.

All members, past members and their families are welcome to attend. The barbeque will be held at the Scout Camp in Glenfield in one of the halls where there is a large catering kitchen, ideal, away from the flies, mozzies and all the nasties of Summer.

Bring the family and a some sausages, we supply the fire and we'll see you at 7:00pm at the Scout Camp, Cambridge Ave, Glenfield, just offMoorebank Avenue. Talk-in available on 6625 repeater.

--Brad. VK2QQ Publicity Officer.

Club News: Gladesville

A REMINDER FROM THE GLADESVILLE AMATEUR RADIO CLUB INC.

PLEASE BE AWARE THAT VK2TVG - GLADESVILLE TELEVISION - WILL BE TRANSMITTING AS USUAL THROUGHOUT THE FESTIVE SEASON, ON ITS USUAL TEST TRANSMISSION EVENINGS.

THAT'S - WEDNESDAY AT 7.30 PM ON CHANNEL 35, AND VK2RFM ON 1250 MHZ
FRIDAY AT 7 PM ON CHANNEL 35
AND SUNDAY AT 7 PM ON CHANNEL 35, AND VK2RFM ON 1250 MHZ

FOR THE FESTIVE SEASON, VK2TVG WILL BE RUNNING VIDEOTAPED MATERIAL, AND AFTER WEDNESDAY 13TH DECEMBER, OUR LIVE PRESENTERS, IN LINE WITH THE WIA AND ANARTS, WILL HAVE A WELL-EARNED BREAK UNTIL WEDNESDAY 10TH JANUARY.

IF YOU HAVE ANY QUESTIONS ON HOW TO RECEIVE GLADESVILLE TELEVISION, CONTACT THE CLUB ON (02) 427 0530, THAT'S 427 0530.

FROM ALL OF US HERE AT GLADESVILLE TELEVISION - A CHRISTMAS GREETING, AND MAY YOUR FESTIVE SEASON BE FULL OF GOOD CHEER.

FROM PAT LEEPER VK2JPA SECRETARY
GLADESVILLE AMATEUR RADIO CLUB INC.

NSW DIV. X'MAS HOLIDAYS

DATES TO REMEMBER

The Parramatta Office of the WIA NSW Division will close for the Christmas holidays from 22nd December, 1995 and will re-open on Monday 15th of January, 1996.

The last Saturday of trading for 1995 will be the 16th of December, this service to members and non members will re-commence on Saturday the 20th of January, for a further trial period, until at least the next Annual General Meeting.

The next Council meeting will be held on Friday the 19th of January, 1996 at Parramatta (Visitors are welcome).

On the 10th of February, 1996 this Council will have its second Council meeting in the country area, this will happen in Tamworth, northern region of NSW, (venue to be advised).

Should any WIA NSW Division members and/or Affiliated Clubs, be in need of our normal services provided by this Division, during the Christmas break please, do not hesitate to contact me by any of the following means:

Phone: (02) 831-8450;
Fax: (02) 621-1516 or
Mobile Phone: 018 249 041.

I WOULD LIKE TO TAKE THE OPPORTUNITY, ON BEHALF OF COUNCIL, TO WISH ALL WIA NSW DIVISION MEMBERS, AS WELL AS THEIR RESPECTIVE FAMILIES A VERY MERRY CHRISTMAS AND A PROSPEROUS 1996.

CESAR MIRANDA, VK2TCM,
ADVERTISING &
PUBLICITY OFFICER

> it.

That's what I said, wasn't it. The 6402 is a UART, I just pointed out
another option that might save a few chips. Please note that most UARTs
would require a processor both for setup and for data transfer. The 6402
and a few others don't, all setups are done by tying pins high or low and
there are separate 8-bit parallel buses for transmit and receive.

No. When I switched to the KPC9612 from a true G3RUH I did notice that
some of the weaker stations could no longer be received. This was
confirmed by others in our area that made the switch. It works
well with our 9600 bps node which is a true G3RUH. You might
be asking why we switched. The price is reasonable, we replace
two TNC's (9600 & 1200) with one, both ports share the same
mailbox, the user firmware is a grade above the
the others, the schematics are readable, and the documentation
is good. We are using the other G3RUH TNC's for nodes. If any
new person wants a 9600 bps TNC, I recommend the KPC 9612 over the
others. We use them with the TEKK data radio's.

John, WB3ESS

I have a 9612 running now at 9600 and it is great. I am using the
Kenwood 733 for UHF and Kenwood 251 for VHF. I installed the K-NET chip
from Kantronics to make it a T-NET type node. It is set up on our
network here in Oklahoma City as a UHF backbone to VHF TEX-NET site.
Another ham 3 miles from me runs 2 9612 as I do with VHF outlets to
145.01 and 145.07. I very much recommend one and the best price is at
Oklahoma Comm Center 1-800-7OK-HAMS They also ship for FREE.
Hope this answered your questions. Buy the way, I tryed Icom radios and
found them to be a FLOP on 9600..Stick to Kenwood or TEK...73

Extreme example? I've got news for you: In my area, its the *rule*, not
the exception.

Your example is exactly the type of "ham" that affirmative-action amateur
radio has yielded to the hobby today. And as the standards are
continuously lowered, it will continue to be the type of ham that gets
into the hobby, until one way you'll wake up in the morning and all
of a sudden you'll realize that the word "ham" has become synonymous
with the description you just put forth.

FF Ssystems does have a DVR that does stand alone...
also LinkComs may have the capacity to be used as a standalone...

The ACC DVR uses 1200baud ASCII control on its Serial Input line
to control tracks etc...so if you find one, it can be used if
your system can outpulse the RS232 to the DVR..

Hello Jim,

1995 was my first time at Dayton. YES it was worth the
trip. The date in 96 is May 17,18,& 19
Advance tickets are $12.00 or $15.00 at the door.
The Hamvention is at the Dayton Hara Arena & Exhibition Center.
You can call this number for info. 513-276-6930 between
the hours of 8:30am to 12:30pm. You must have a touch tone phone.
Have them send you a planing guide. It has all the info you will
need. Hope this helps.

From: rich@gate.net
Message-ID: <4apl0f$t50@hopi.gate.net>
Source record: 233927

Hi, folks. I have come across a nice little FM business band handheld, a Yaesu FTH-2005. I'd like to use it for Hamming. After some tinkering, I discovered a panel glued to the front of it that conceals several un-labeled buttons that let you program most functions. It tunes from 50Mhz to 300 Mhz, I am not sure of the transmit range, but the RX range seems to be centered around 150-170 MHz, and won't seem to reliably RX in the amateur band. Sometimes it works, sometimes it only TX's. It works perfectly in the band range mentioned above. The offset seems to be 600Khz up or down or simplex only, can't figure out how or even if it can do odd splits. It has programmable encode/decode PL that seems to work.

This seems like a sturdy little radio and would be great to work the local repeaters with. Does anyone know how I might widen/tune the RX for amateur band, and maybe tell me how/if it can do odd splits? I've sent a message requesting literature about this radio to Yaesu America, but they already said it will be several weeks before they MIGHT get back to me. Any input from you folks would be appreciated! I'd prefer a direct answer to my E-mail address, if it's not too much trouble, my providor is beta testing the software that my newsreader is on, and it crashes frequently! Thanks!

Are you serious?
All of this applies equally to SSB and any other mode.
Adjust your equipment, and attempt to make a connection.

No tune solid state rigs and resonant antennas require no tuners
or tuning up.

SO what is your point?

>Instead of washing their hands 50 times a day, or constantly
>checking doors to see if they are locked .... these people
>are hammering away CQ CQ CQ all day long?

Is this it? Well, again, this can be any mode, it has nothing to
do with CW. OK, so there are some obsessive people calling CQ
on the bands far too long for your taste? Is this it? OK,
I agree.

3754. vlf communications unlicensed

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-14 00:00:00 UTC
From: degreene@heurikon.com
Message-ID: <degreene.818982288@news.heurikon.com>
Source record: 233934

Hi,

Does anyone know if there is any activity still in the
VLF band by unlicensed operators? I read a magazine once
called the "Lowfer" or something like that that discussed the
subject of VLF experimental communications, quite often over
several hundred miles, by unlicensed experimenters who were
limited to low power and antennas of less than 50ft.

At these frequencies, it was noted that natural phenomena generates
some really strange signals. One was called a whistler I think and had s
something to do with a signal getting caught in the earth's magnetic lines
of force and travelling thousands of miles into space and back. Something
like thaty anyways.

Is anybody out there stillinto this or know of people who still are
or current sources of information on this radio hobby?

Please email responses to degreene@heurikon.com. I'll also watch
this newsgroup.

Thanks,
Dave

The type of reception you are looking at is all VHF/UHF. Unless you are
interested in some of the other SW servies I would get a scanner.
However if you get your No Code Tech Ham licence you can talk to the
Space Shuttle using a simple 2m setup. All you need to buy is a Radio
Shack Ht-202 and there 30 watt linier(sp) amp, and a good antenna.

Thanks

Why stop at HF phone Jack? Why not give them the entire ham radio spectrum and completely eliminate the crying and complaining once and for all! Better yet,...just have the FCC sell off the spectrum, eliminate Ham Radio, and reduce the taxpayers dollars with the profits. Seems to me it all makes about the same amount of sense. Until the ITU changes its mind the FCC can't change a thing. If the folks want the spectrum, just meet the requirements. Seems that the folks that want to work DX on HF and only use SSB forget that much of the DX doesn't speak English and far greater numbers of us don't speak foreign languages, yet CW still allows us to communicate. We also are expected to be able to provide emergency communications during time of need. There is a tendency to forget (with every 3rd car in the US equipped with a cellphone) that in many 3rd world countries the phone system is very poor and unreliable even in good times. During earthquakes, floods, etc. those communications links are non-existant. As nice as GTOR, AMTOR, etc. are to use and with the error reduction capabilities that are written into the firmware, not all Hams have this neato technology. During an emergency situation communication in its most basic form, regardless of language, is still CW. It doesn't have to be everyones favorite mode, but it still makes sense as a requirement. For those who want to work HF phone and not learn the code,....no problem, thats why Hams gave away 11 Meters years ago. It all makes very little difference as the law is the law. Ya want the spectrum, meet the requirements! JUST DO IT!

Some elmer you would make. Great encouragement. I sure am glad that the hams in my area don't live in the stone age, but I guess that we aren't "real hams" by your standards. Have a nice day, 73 (oops do I have to be a "real ham" to say that?).

Greg Danylchenko (ac742@FreeNet.Carleton.CA) wrote:
: I would appreciate some advice.

: I am looking for an HF base unit with 6 meter capability. Should I go with
: a TS-690 (the TS-450 with 6m and no auto antenna tuner) or the TS-850SAT
: (HF only but with auto antenna tuner) and add a 6m transverter at some
: point? The price difference between the TS-690 (with no auto tuner) and the
: TS-850 (with no 6m transverter) is only $150.00.

: A tough decision, I know, but any advice would be appreciated.

I can't give any specific comparison, but as a TS-690 owner (I opted for
the auto tuner too even thogh I use the rig mostly on 6m) I have been
very pleased with the unit. I have confirmed contacts on many states
for 6m with just the 50w capability of the rig and a 5 element beam
up about 30 feet. Snagged California on a double skip opening
18 months ago. Anyway, since getting the 690, I've now added additional
filters for 1.8Khz sideband and 500hz CW.

As to a transverter, I think it is an option, but the 690 I can more
easily use to drive
a 6m linear if I get into as the band comes back in the next fe
years.

If you call "CQ CQ CQ" repetitively "all day long", you are a lousy operator whether you are using CW or SSB or any other mode. If you think that's all there is to good CW operating, you better think again.

And what the Hell is *wrong* with washing your hands 50 times a day??? Compulsive/obsessive indeed. You know how many germs hide out on a typical keyer...?

There is an ad that appeared in CQ during 1985 for prints of a piece of artwork entitled "Night Signals" which depicts a young ham of yesteryear in his shack. I'd like to get a copy but have had no luck contacting the gent who was selling them. He is listed in the ad aws N1DFF. FCC data says he's now N0LFU. But mail to him at the address in the FCC database has been returned marked UNKNOWN, NO FORWARDING ADDRESS ON FILE. Anyone know where/how to get a copy of this print?

Item #2...
Back in the early seventies, shortly before actually becoming a ham myself, I read two pieces of amateur radio fiction. One was Walker Tompkins' "SOS at Midnight". This book is still available from ARRL (an updated edition in line with today's technology. In the edition I read Tommy Rockford ran a 75m rig powered by a dynamotor in his car.) The other book was titled "Today I Am a Ham" (or something similar). I can't remember the author. Any readers familiar with this book? I'm really curious to know who wrote it, where copies might be found, who was the publisher, etc.

3768. This Week in Amateur Radio #142 (for air through 12/22/95)

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-15 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <xdNmF2C.sanderman@delphi.com>
Source record: 233798

Here is a summary of news items covered on edition #142 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 22-Dec:
-
1. DOVE-OSCAR 17 Suffers Another Major Failure
2. VK5AGR Appointed IARU AMSAT Satellite Frequency Coordinator
3. MIR Space Station Transmits Slow Scan TV Images on 2 Meters
4. Federal Investigators Launch Another Inquiry into Microsoft
5. "Christmas on 20 Meters" - 'Tis the Holiday Season
6. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
7. Upcoming Special Event Stations with George Bowen, N2LQS
8. "Amateur Radio Newsline" - Edition #957 from Los Angeles
9. Weekly Propagation Forecast
10. New Amateur Radio Experiment Planned for Next Shuttle Flight
11. "Twas the Night Before..."
12. "The RAIN Dial-up" from Chicago
13. North Pole Downsizes Due to Competition, More Cut-backs Likely
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard each Saturday at 8:00 PM (EST) and carried on VHF/UHF
repeaters throughout North America and on 160 meters at 1860 kHz.
Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
Here in the Capital District, "This Week in Amateur Radio" is heard
on our "flagship" repeater, WA2OQE/R in Troy, on 145.33 MHz,
courtesy of the Niagara-Mohawk Amateur Radio Club. The program is
repeated Mondays at 8:00 PM.
-
Due to the loss of satellite facilities, the service is being
carried exclusively on 160 meters and on the local 145.33 repeater.
The "Tech Talk Network" expects to complete negotiations with a new
satellite uplink carrier by the beginning of January. "This Week
in Amateur Radio" will return at that time. Details will be posted
as conditions warrant. All affiliates are requested to contact the
producers for further information.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (e-mail kxkvi@delphi.com) or Stephan Anderman, WA3RKB,
at 518/664-6809 (e-mail sanderman@delphi.com). You may also reach

them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

Hello Gang,

I've got some telegraph key / bug restorations going and need a few parts to finish up.

1. Bunnell Gold Bug -- need the circuit closing lever and mounting hardware.
2. Signal Electric Semantic -- need the pendulum stop post.
3. Electro Bug -- need weights. need one thumbscrew and jam nut.
4. Levinson Radio "Like-A-Flash" -- need finger pieces, binding posts.
5. Logan SPEED-X reverse frame -- need finger pieces
6. Clapp-Eastham -- need binding posts
7. Independent Wireless -- need binding posts

Would buy parts off your junkers or buy your junkers for the parts.

Hi Michael:

I am wondering if the inverse is true. If I come up with a mailing address in VE and take the test can I get licensed? There are some things I'd like to do that would require an STA in the U.S. but they may be legal in Canada. I'm not sure that what I'd like to do would be 100% OK in VE, but what I've seen of the Canadian rules comes a lot closer than the US rules.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 15/2330Z DECEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 15 DECEMBER AND FORECAST FOR 16 DECEMBER - 18 DECEMBER

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 14 Dec
Daily Proton Fluence >1 MeV: 5.4E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.8E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
16 Dec 17 Dec 18 Dec
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 16 Dec: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 14 Dec
Learmonth 11 2223 3332
Fredericksburg 10 5
Planetary 10 3

Observed Kp for 14 Dec: 1100 1110
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
16 Dec 5 quiet
17 Dec 5 quiet
18 Dec 5 quiet

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

15 Dec Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
16 Dec Normal Normal Normal
17 Dec Normal Normal Normal
18 Dec Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
15 Dec 16

Observed Australian Regional MUFs:
Townsville: Near predicted monthly values with 15-20%
depressions after 22UT.
Sydney: Near predicted monthly values with blanketing
sporadic E observed after dawn.
Hobart: Near predicted monthly values with 20% depressions
after 22 UT.

Predicted Monthly T index for December: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
16 Dec -40 about 20% below predicted monthly values
17 Dec 5 near predicted monthly values
18 Dec 5 near predicted monthly values

COMMENT: IPS HF Communications Warning 31 was issued on 15
December and is current for interval 16 December only. Depressed MUFs
expected for southern region Australia. Also frequent sporadic E
layer expected today for southern region Australia. Sporadic E
layer may support normal frequencies.

It is true that all you need is to pass the license tests and have a mailing address in the U.S. I've held a U.S. callsign since 1978 while still a Canadian resident. I had a P.O. box for my mail.

On the matter of reciprocal licensing: You follow the rules of the country AND the rules of your own license class at home. You apply whichever set of regs are more restrictive. This is how the concept was explained to me by Art Stark, VE3ZS (SK) formerly the D.O.T./D.O.C. official over whose official signature all the TRC-24 and TRC-25 (TRC = Telecommunications Regulation Circular) were released in the 1960s and 1970s in Canada. These documents were the syllabus of study for the Amateur/ Amateur Advanced Radio Operator Certificates and the amateur regulations). I believe these are called R.I.C.s nowadays.

>amateur service, not as bait for our 11 meter friends.

>Mike, KK6GM

Here in Texas and other parts of the US, certain individuals who used
to be on 11 meters have found the joys of two meters and are there
illegaly. They run down the highway usiing two meters and marine vhf
radios. They don't seem to care for getting or dese to get a license.

What we need is for the FCC to enforce current rules, not relax them.

Don, KA2IMX

: Dave, when I got my no-code I had full intentions of learning the code
: and upgrading. Then I listened on the HF bands. I'm not going to bother
: now. It's almost as bad as CB. The code, I'm sorry to say, has nothing to
: do with on-the-air conduct. I'll stay on VHF/UHF and up, thanks, and for
: that I don't need to upgrade.

Just a point for those who think "HF" is a wasteland, and for those
who might be reading these comments and put too much stock in them:

Some of the activities on HF bother me tremendously. But the fact is
that truly offensive behavior is pretty rare. It is most obvious on
SSB on certain bands, but even there it is fairly easy to avoid.
If one seeks out such activity, and listens to it (it *is* insidious)
for long, it may indeed seem to be prevalent, but it is not.

Still, some of us do consider HF voice to be more unpleasant and
agravating than it is worth worth. Fortunatley, there are a lot of
other modes and activities on HF that are a lot more pleasant.
Digital mode operators are a pretty good bunch, RTTY is still pretty
gentlemanly, and of course most of the CW operators I meet are more
interested in meeting people and communicating than they are in
shouting profanities at anyone unlike themselves.

Anyway, the point is that "HF" is *not* like "CB". I've had thousands
of exciting and interesting contacts over the years, and I'd guess
that only about 2 percent of my time on HF has been spoiled by some
jerks. Of course only about 15 percent of my operating has been on
SSB, and that 2 percent figure comes mostly from my time on SSB...

You may not enjoy anything HF has to offer, but please don't condemn
it based upon a very limited exposure to just one of its many facets.

Thanks,
Greg

3783. Mobile HF Interference

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-15 00:00:00 UTC
From: kr4ah@bga.com
Message-ID: <4aru49$ce3@giga.bga.com>
Source record: 233868

Is this the right group to ask a question about installing a
mobile HF radio in a car, or is it limited to discussing the
mental health of folks who express an opinion about morse code?

I have inatalled an FT-900AT in a 1995 Ford Escort and have a
chopping noise on both transmit and receive. I have not yet made
the fuel pump modification to the car. The radio has a power supply
that is totally independent of the car electrical system. There is
a separate 12v deep cycle battery in the trunk. I have installed the
radio using the remote mounting kit; the radio in the trunk and just
the control head in the driver's compartment.

Could the noisy fuel pump be causing a problem with my transmit
audio? Although Yaseu says that the remote kit doesn't allow noise
to be induced into the audio, could that be the problem anyhow? If
so what is the cure? Is there something else that I'm overlooking?

Any help would be appreciated. Thanks.

GEEEEEE.... I wonder what the rest of the hams out there in the DX countries condider themselves to be ???? Are Asians white ??? Are Africans white ??? Are the fellows in South America and the Carribean white ??? Son of a gun.. I guess they must be since this is such a racist hobby with only white boys allowed. Oh how SEXIST of me to forget about the ladies !! I guess Mike's

radio must have a special filter on it to prevent enjoyment of the hobby. We end up with this same kind of crap in engineering. The profession, I believe, is a discipline not unlike any other such as teaching, law, medicine, etc. However, there are some jerks out there who truely belive the occupation is racist as well as sexual. This is why we have such organizations such as the Society of Women Engineers and Society of Black Engineers. I would hope that this type of thinking would result in the establishment of a "color or sexual" title of an ARRL type organization. We already have the establishment of the Lambda radio club for gays and bisexuals. Do we really need to go further down this road to make amateur radio something other than a great hobby or "pool of technical" resources as spelled out in the FCC Communications Act ??

Just some fuel for the fire or grist for the mill. All you racist sexual pigs out there , please feel free to flame at will. Better you spend your time on the keyboard flaming me than on the air.

Just to set the record straight: I have too picked up a soldering iron.
I still have the scar on my hand to prove it! But seriously, what is the
problem? How does the amount of knowledge and experience that someone
else chooses to acquire affect what you can get out of amateur radio?
The license is there to satisfy government regulations. There is little
point in trying to attribute any value to it beyond that. If you want to
be proud of your experience and accomplishments, there's no need to point
to your license to say "See, look what I did!" Instead, point to the
accomplishments themselves. (That is, if you feel the need to get the
recognition from others in the first place.)

: In any case, how come they need 4 months lead time to process my renewal?
: Granted, the interest on the $24 won't amount to much, but it's something.

As with any business, wouldn't YOU want to have an idea of sales figures
4 months in advance? After all, they need to buy inventory, schedule
deliveries, plan production, etc. just as if they were manufacturing
autos, computers, or anything.

I believe it has nothing to do with processing time of your renewal. I think
they just want a sales commitment from you so they can plan for the next
several months. Granted, your one piddly subscription means very little
to a production line, but thousands of piddly subscriptions do.

In today's market, you really need to be planning "just-in-time" purchasing,
production, and delivery. It saves you (the consumer) money in the
long-run, if they can keep their costs down by good production planning.

I'm not kissing up to QEX (I don't even subscribe to it), but it's just
good practice to plan your sales a half-year or longer in advance.

Don't sweat it! Just think of it like you're getting an "Early-Bird Discount".

3789. GB2RS News 17th December 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-15 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <819080783snx@llondel.demon.co.uk>
Source record: 233874
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 17th of December and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The Worked All Britain organisation has announced a new award for amateurs and listeners which will commence on the 1st of January. The award is based on the 10-kilometre squares of the National Grid, but without county boundary complications, and is to be known as the Millennium Award. It has been introduced because of the uncertainty regarding the future of local authority and county boundaries following the Review of Local Government. The new award will operate alongside the existing WAB awards programme. Full details of the requirements will be available from Brian Morris, G4KSQ, whose address is 22 Burdell Avenue, Sandhills Estate, Headington, Oxford. The postcode is OX3 8ED and Brian's address is correct in the RSGB Callbook.

Would all contributors to the GB2RS news bulletin service please note that, because of the Christmas holidays, there is an earlier deadline for the next two GB2RS broadcasts. As mentioned last week, the deadline for both broadcasts is first post tomorrow morning, Monday the 18th of December. So anyone wishing to include an item in the GB2RS broadcasts on Christmas Eve or New Year's Eve who has not already posted it, should fax the item to 01707 649503 by 10.00 am on Monday the 18th at the latest. Faxed items may also be sent in any time over this weekend.

The first broadcast in 1996, on the 7th of January, will be compiled as usual on the Wednesday morning preceding the broadcast, that is on the 3rd of January.

Just to repeat those dates: all material to be included in the GB2RS broadcasts on the 24th and 31st of December must be received by mail or fax by 10.00 am on Monday the 18th of December. This includes details of any club meetings for the regional section of the broadcasts. The fax number once again is 01707 649503, and material should be marked "for GB2RS News".

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Fernando de Noronha, PY7ZZ is signing PY0FZ from now until Wednesday the 20th of December.

From Macquarie Island, VK0WH continues to be active between work assignments. Look for him on Sundays at 0930 on 7010 kHz on CW and at 1030 on 14130 kHz SSB.

And from the South Orkney Islands two Argentinean operators are active as LU6Z from this month for about eight weeks. Activity is mainly on CW but with some SSB operation.

Rally organisers seem to be taking a Christmas break. We know of no rallies for today, or any until the 21st of January.

Now for the contest news:

And we know of no HF or VHF contests either this weekend or over the Christmas weekend. The RSGB VHF / UHF "Christmas Fun Contest" takes place on 70, 144 and 432 MHz between Tuesday the 26th and Friday the 29th of December inclusive. The rules are in the August RadCom.

And now the solar factual data:

The period from the 4th to the 10th December has seen a slight decline in general solar activity, keeping it at low levels. Geomagnetic activity has also declined from unsettled to quiet, and there have not been any flares. Sunspot counts declined every day, ending the period at only 9 and with a mean of 15. Solar flux levels are very slightly up over last week at 74 units most of the time, with dips down to 73 units, giving an average of 73.7.

X-Ray flux levels have also levelled out and were A1.0 every day. Levels below this are not recorded as they are unreliable. The electron fluence has been at low levels every day, and the 90-day mean of solar flux on the 9th of December was 75 units.

The geomagnetic activity has generally declined from an unsettled level of Ap 17 units on the 4th, down to the quiet level of only 2 units by the 8th, giving an average of 6.2. The daily aa indices, as supplied by the British Geological Survey for the period from the 28th of November to the 4th of December, averaged 24.5 nanoTeslas - about K3 - which is quiet to just unsettled. The 1st of December was the only unsettled day, which was up to 81 nanoTeslas at times, about K5. Bartell's rotation 2217 started on the 2nd of December. The solar wind speed has been at moderate levels with low particle density.

I'll repeat the figures:

Spots - 15, Flux - 73.7, Ap index - 6.2, X-Ray flux - A1.0.

Due to the industrial unrest in France, it has not been possible to get any ionospheric data this week.

And lastly the solar forecast:

Solar activity is expected to be very low this week. Flux levels are expected to be in the 70s and geomagnetic activity is expected to decline to quiet levels, with an Ap of about Ap 3 units. No coronal holes are on the visible disc. MUFs during daylight in the south are expected to be about 20 MHz and the darkness hour lows about 7.0 MHz. Northern levels will be down on these levels by at least 2 MHz.

And that is the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Romeo and G7 Victor Yankee series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Papa series.

ARLP052 Propagation de KT7H

ZCZC AP21
QST de W1AW
Propagation Forecast Bulletin 52 ARLP052
From Tad Cook, KT7H
Seattle, WA December 15, 1995
To all radio amateurs

SB PROP ARL ARLP052
ARLP052 Propagation de KT7H

This is the last propagation bulletin for 1995. After this week the author will be on vacation in the state of Bahia in Brazil until the new year. The next bulletin will be for January 5, 1996.

Solar activity last week was unchanged when compared to the previous week with an identical average solar flux of 73.4. Geomagnetic conditions were stable, with K indices of zero or one over many periods.

Don't look for much change over the next month. We are near the bottom of this solar cycle, and there just aren't any active solar regions that should cause any change. One exception is on December 24 when a recurring coronal hole should provide some geomagnetic instability, with rising A and K indices. The effect should fade over the last week of the month. Otherwise look for solar flux to continue to meander around the low seventies.

Sunspot Numbers for December 7 through 13 were 14, 11, 29, 25, 29, 15 and 15, with a mean of 19.7. 10.7 cm flux was 74.1, 74.1, 73.9, 73.5, 73.4, 72.3 and 72.6, with a mean of 73.4.

there.

There's another problem, too. The relatively small numbers of hams with
5-10 watts on these frequencies would be no match for the literally
thousands of outbanders who routinely run 1,000 watts or more on there.
Nice idea, but the numbers are against it.

Why bother changing anything? No-codes can just practice their CW and
use SSB on 11Meters now. I don't see what the big deal is.

The RLC 1 cannot be upgraded to voice nor does it support autopatch....

The RC-100 and 1000s does not support multiple rptrs/links like the LinkComs can, nor do they have the speech vocabulary like the LinkComs...considering that the ACC systems used to be the standard, the LinkComs are CHEAP compared to them....

I own a ACC RC850 and two RLC3s...the RLC will do more than my 850 would in a lot of ways (It still has some catching up to do in some areas though) at half the price!

The Kantronics is not much to look at (I think its a redo of the RFC controller that was on the market years ago)...

For what HE was asking for, the Linkcom RLC series is the one to go with....for little link capacity while having voice ids and autopatch... CATs are also good units...

73

>

Regretably, Mr. Stark was wrong. He was wrong in that it would be impossible for the Canadian authorities to enforce Amercian laws in Canadian territory. The only laws that the courts can enforce are those that are have been enacted or promulgated appropriately. Therefore, visiting operators are subject to the rules and regulations in the territory that they are operating. In other words, if an U.S. operator is operating in Canada, he operates in accordance with our rules, not his home country. The only way that we could force a visiting U.S. amateur to operate in accordance with U.S. regulations would be to embody these regulations in the Canadain ones. This has not been done so.

Radiocommunication Information Circular 25 (RIC-25) contains the laws and regulations with respect to amateur operation, including those that regulate the operation of visiting amateurs operating their stations in the territory of Canada. In effect, visiting U.S. amateurs who hold General, Advanced and Extra licences may operate there stations as if they were holds of a Canadina Basic, 12 w.p.m. and Advanced qualifications. As a result, they are not bound by the sub-band restrictions while operating their stations in Canada. Therefore, the concept that amateurs must operate in accordance with the most restrictive regulations is not supported in law.

73 and live better digitally
Jim, VE3XJ

3799. 10/11 meter no-code idea (was Re: FCC shutdown)

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-15 00:00:00 UTC
From: rossi@VFL.Paramax.COM
Message-ID: <1995Dec15.152905.22210@VFL.Paramax.COM>
Source record: 233884

In article <4apcui$94e@news.microsoft.com> v-ntxes@microsoft.com (Eric E. Scott) writes:
>Hi,

>I'm a No Code Tech, and I'm in the process of upgrading to my General.
.... stuff deleted..
>Prior to getting my Ham license, I played around with SSB CB. I enjoyed it..

It just occurred to me... The international regulations say..
"no HF privileges without a code test" OK. But what about CB? They are
below 30 MHz and they don't even require a license!

So.. Why not give the wasteland between 10 and 11 meters back to the hams
and then permit No-codes to run 5 or 10 watts of SSB (and even CW) there?

Makes perfect sense to me.. It would be up to the no-codes and higher
class hams to set a good example to clean up the band. Be sort of like
giving someone an old run-down house and saying -- it's yours if you fix
it up.

Only problem I see is... if there is enough activity, the present illegal
activity my decide to move somewhere else.. Which I guess is OK as long
as it is not above 28 MHz. But if you get enough ham activity (including
from higher class licenses) maybe the illegals will at least go for the
no-code. For this to work though, regulations on the new band, call it
10 1/2 meters, would need to be enforced at least as will as they are on
the rest of our bands.. to try to curb the illegal activity already there.

I think this idea or some variation is worth further consideration.

3800. Advice Plse: TS-690 vs TS-850

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-15 00:00:00 UTC
From: ac742@FreeNet.Carleton.CA
Message-ID: <DJn32H.9Gv@freenet.carleton.ca>
Source record: 233885

I would appreciate some advice.

I am looking for an HF base unit with 6 meter capability. Should I go with a TS-690 (the TS-450 with 6m and no auto antenna tuner) or the TS-850SAT (HF only but with auto antenna tuner) and add a 6m transverter at some point? The price difference between the TS-690 (with no auto tuner) and the TS-850 (with no 6m transverter) is only $150.00.

A tough decision, I know, but any advice would be appreciated.

Thanks a lot.

==== This will be the last number before Christmas and so we wish ====
==== to everyone a pleasent Merry Christmas and a Happy New year ====
==== Let's ask for a better 1996 , peace in the world and unity ====
==== among the RadioAmateur comunity.Best of 73's from NPDXG gang ====
==========================================================================

1A0 - [SMOM] 1A0KM will be active again from December 8 to 17
The team is : I2UIY , I2VXJ , I0JLB , IK0FVC , ON1AIG.
Operations on all bands and satellites.This DXpedition
is sponsored bye NCDXF and INDEXA.The QSL is via IK0FVC :
Francesco Valsecchi, Via Bitossi 21, 00136 Roma, Italy or
via the Bureau.
EA4 - [Spain] EA4AIK/P will be QRV from Olivenza Castle.Operation
on 15/20/40/80 meters SSB and CW.QSL via EA4AIK.
FT5_w - [Crozet] F5SZK and F5IJT will be active from December 95
to February 97 from this Island as FT5WF and FT5WE
respectively , they will leave France in December 7.Operation
on CW,SSB + RTTY/PKT/SSTV.A Beacon will be on the air with
call FT5WE (6 meters band).The HF frequencies are the
following:
CW 3505,7005,10105,10115,14005,18075,21005,24895,28005 Khz
SSB 3792,7045,14145,14245,18145,21245,24945,28445 Khz.
QSL to FT5WE via F5GTW , FT5WF via F5IZK.
KH9 - [Wake Isl.] From 24 to 31 January 1996 AL7EL, WB2DND, KC7V
and K4HQI will e QRV from this Island , they will concentrate
```

on RTTY and Satellite.Call will be reveled shortly before
operation to minimize pirate operation.Internet E-mail will
be available.QSL to AL7EL.
PY0_f - [Fernando de Noronha] PY7ZZ will be qrv , December 13 to 20 ,
from this country with the call PY0FZ.QSL via PY7ZZ : Fred
Souto Maior , Rua Almeida Belo 241/302 , Bairro Novo Olinda
PE 53030-030 , Brasil . Operations on all HF bands .
VO - [Canada] From 11 to 13 this month was active a special station
VO1AA for the celebration of the first TransAtlantic radio QSO
(dated 12 Dec 1901) , any HAM/SWL who works/hears VO1AA on 12
December will receive a special QSL card and for those who worked
on 11 and 13 will be credited for the Marconi Transatlantic
Centenary Award.
VP2 - [British Virgin Isl.] WB8ZTY, will work as VP2V/WB8ZTY from
January 1-12, 1996.He will be in his Honeymoon so don't expect to
much radio operation , :-)

****

SB DXNEWS @ WW <CT1ENQ $NPDX.009W2
NPDXG Bulletin #9 [2/3]

QSL Manager KG9S -> QSL's for TO5M, FP/K9GS,FP/N9AU, FP/ND9O and FP/W9OP
(1995 CQWW SSB and outside the contest go to K9GS) : K9GS ,Gary Schwartz
W328 S8072 Hickory Nut Ln. ,Mukwonago ,WI 53149 ,U.S.A.

GU3MBS & GU3HFN -> GU3MBS has been receiving QSL's for GU3HFN (CQ
WW DX Contest) but he is not the QSL Manager for this station.
The correct route is : Guernsey ARS GU3HFN, P. O. Box 100, GUERNSEY
,via England.

ZL8 -> There is some information about the coming ZL8 dxpedition , as it
seems it will be in May 1996 , with 8 Operators (most are ZL's).Duration
is about two weeks , no dates yet .

Pirates -> Callsigns ZL9AI ZL9A1 HAVE NOT been allocated by the New Zealand
adimistration, (MOC) . Only 3 Calls have been issued for Auckland & Campbell
Isl. , they are : ZL9GD , ZL9NAA , ZL9TJD . None of these 3 are current !!
There as been some pirate operations using the calls OA4PPE , PY2EEI , G3PPE
and DL4EEI.AP6YA is also a pirate says W6YA.!

Midway Island -> KH4/NH6D had to delay is departure from Midway to Hawaii.
He will stay for one more week.He is normally with VK9NS on 14.260 Mhz.

Macquarie Island -> VK4ATS is no more QSL manager for VK0WH , his new QSL
Manager is VK9NS.He his plannig to QSY from his usual freq. (14.130) to
14.260 Mhz (IOTA freq.) and 14.255Mhz (DX net).

3V8BB -> DJ7IK , DL8OBC and DL2OBF are back in DL , they made 7500 QSO's
from 3V8BB station.From those 5000 were for CQ WW DX where they scored
about 7.9M points.There was no operation on the WARC bands and 6 meters,
due to local legal policies.QSL is being printed and they will be sent to
all stations in the log via the Bureau , direct requests to DL2OBF.

There operation was from 22 to 29 of November.

XZ1A -> Operation is expected for January 1996.There are already 25,000 QSO's made from this site.

DX Convention -> The New Orleans International DX Convention will be held on August 30-31, 1996 at the Royal Sonesta hotel on Bourbon Street in the historic French Quarter of New Orleans.Information: Wondy, K5KR (504) 837-1485, or e-mail to Don, W5FKX: dboudr@lsumc.edu.

KD7P -> Bob stills holding cards for his operations from H7, NH4, NH5, NH6, 5W1GB, OA, LU, KC4, KP4 , (? KA2DX, KA2IJ, KA2MI, KC6DX).
To get confirmation if you are on the log send email to : kd7p@seanet.com

KH2 -> Ray, WH6ASW, works as a teacher on Guam for the next two years and will appear on the bands as WH6ASW/KH2 soon. QSL via G3EZZ.

4U1UN -> If you don't receive QSL via W8CZN try AA2FN or WB8LFO.

Xmas Isl. -> ND3A return from Xmas and made a total of 560 QSOs as VK9XRS , QSL via ND3A (Direct or via the Bureau).He will start QSL reply from mid January 1996.

Silent Keys -> CT1LP (13th December 1995).

Portuguese Castels Awards -> Last few days (8-9-10 /12) have been active some Portuguese Castles , they were :
C068 - Longroiva
C069 - Marialva
C070 - Ranhados
C124 - Mos
C125 - Torre Moncorvo
C128 - Moreire de Rei
C129 - Trancoso
C134 - Vila Flor
C137 - Castelo Melhor
C138 - Numao
Activity on 15 , 20 and 40 meters by CT1AHU/p and CT1AVC/p. QSL via Homecalls.

PY IOTA -> Luis , PY2HA his active from SA-071 , his QSL address his :
Luis Adriano Campos , Avenida Adriano Dias dos Santos, 172
11470-220 Guaruja (Sao Paulo) , Brasil.This IOTA group is "Hard to get"

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I am looking for a power supply for or compatible with a
Kenwood TS-430-S. Supposedly the matching power unit
is no longer made (although a newer model might be compatible).

The xceiver has the power connector marked (6-pin molex) as
13.8V @ 20AMPs.

Any pointers? I am looking new and used.

Thanks. If possible, please reply by mail - news delivery here is slow...

My father-in-law (W9OIB) was wondering why 160 meters wasn't quite as bad as
the other bands. My personal opinion is that the only think protecting
top band is the lack of off-the-shelf solutions (especially those that fit on
city lots).

What follows is a message from a guy that asked for your help. All you
"helpful" hams ignored him. He did not like my answer but at least I
paid him some attention

Burt, K1OIK.

Hello k1oik !

You wrote in a Mail about 'Re: Q: What means "HAM"??' this:

k> BI>BF> Ham means fat, white, lazy intelligent white MAN.

As I wrote my simple and honest question in the newsgroup I thought I
would get lots of answers. At least ten or twenty. Yes, I really thought it,
because the word "HAM" is used so often. Meanwhile I naerly can even use
the word when talking about radio amateurs, but still I don t know what it
means.
Fact is I have got no answer on my question -except yours! But,
please forgive me this, your answer is not very helpful.

If I had been a film director, and you had been an actor in my film,
then I would have given you the roll of the oracle. ;-)

Hope to get your next riddle soon!

Bye ...

Martin

3807. Re: Q: How is the badwidth for PR calculated?

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-16 00:00:00 UTC
From: ssampson@icon.net
Message-ID: <ssampson.39.0009E3C3@icon.net>
Source record: 233742

<billy@clobber.unterland.de> writes:

>My question is: How can you calculate the needed bandwidth by knowing only the
>baud rate?

You can't. FM Bandwidth has to do with modulating tone frequency and
deviation.

>Could it be this: x baud = x Hz ? For example, transmission speed = 1200 baud,
>means bandwidth of 1200 Hz?

The ARRL handbook should have a Bessel chart in it somewhere. What you do is
find the Modulation Index in Radians, and then go along the Bessel chart at the
bottom. FM packet at 1200 baud uses 1200 Hz and 2200 Hz.

For example a peak deviation of 3.0 kHz, a modulating tone of 2200 Hz, results
in a Modulation Index of 1.36 Radians. Going across the Bessel chart on the
bottom till 1.36 is reached, and then grabbing the first line above the 0
baseline, will give you the number of sidebands. This first line close to
0 is about 40 dB down, and detectable at range. You should find about 4
sidebands as the answer. Now since there are 4 on each side, you double
that to 8 and multiply by the modulating tone (2200 Hz). This gives you
about 17.6 kHz bandwidth. If instead you chose 3 sidebands each side
(about 30 dB down), you would get 6 times 2200 or 13.2 kHz bandwidth. This
is about the limit of most stock FM radios. The 3 dB bandwidth is about
15 kHz. It would seem that your target deviation is just shy of 3.0 kHz,
and of course the tone frequencies are fixed.

On SSB, the picture changes, since it is really FSK, not AFSK.

3808. Computer Encoding!? HELP

Subject: Computer Encoding!? HELP!!!

>>I would like to know if anyone out there has any experience encoding
>>messages or more specifically DE-coding them...My XYL has been into my
>>ham computer and has somehow written some things in letter form and
>>encoded them...

Good for her! Now keep your nose out of her private affairs. She
encrypted them for a reason. She doesn't want them to be read by others.

Either respect her privacy, or take your paranoia to another
relationship.

Hi John,

I have a similar installation but in a Dodge Raider. The only noise I
pick up from time to time is ignition noise from passing vehicles. I'm
not familiar with the Ford so I can't offer any help. All I can say,
is that once you do find the problem and fix it, you'll have an excellent
station. I use a SG230 (external mount) along with there SG303 antenna.

Breaking into a pileup with this combination is no big deal. This morning I worked The
Gambia on 17m from SE Georgia while mobile. Hang in there!

Good Luck

>I am looking for an HF base unit with 6 meter capability. Should I go with

Hi Greg:

Gee, I never checked the price difference. I would get the 850, it
is much more radio, though the 690 is fine. The 850 has nice extra
features like slope tuning and other filter selection possibilities.
For $150 difference, pick up the Ten Tec 6 meter transverter kit
and go 10 watts on 6 meters with that. Of course, the difference
will be that the 690 will give you much more power on 6 meters,
but the 850 with transverter probably gives you more receiver,
and a 6 meter brick for more power could be added later. That is
my take on it.

3811. Fix your MFJ 986 Tuner before it breaks

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-16 00:00:00 UTC
From: rfreeman@earthlink.net
Message-ID: <30d30e68.876987@news.earthlink.net>
Source record: 233746

To all hams:

If you have a MFJ tuner Mod. 986, the shaft in the roller inductor may break at any time. The problem is the hole in the front panel is slightly higher than it should be so the shaft is bent all the time. To correct this 4 washers need to be put under the roller inductor to raise it to match the front panel hole. I drilled holes in four pennies and used them. They seemed to be just the right size. Doing this will save you the $55+ fee that MFJ charges for a new roller inductor when the shaft breaks.

Yes, MFJ is aware of this design flaw.

Post any questions.

There are several types of spread spectrum, the most common being
direct sequence, and frequency-hopping. Without getting into a detailed
discussion of how they work, basically the idea is to take a narrowband
signal and spread it over a much larger band. Given a fixed transmitted
power level, this leads to a much lower power density (i.e.
watts/Hertz), which is why the spread spectrum signal can be below the
noise floor. When the signal is despread, the original SNR is restored
due to the processing gain.

The amount of processing gain achievable is limited by practical
considerations, not theory. Processing gain is the ratio of the spread
bandwidth to the original narrow bandwidth. So if you start out with a
10 dB SNR narrowband signal with a bandwidth of 10 kHz, and spread that
to a bandwidth of 100 khz (a factor of 10 dB), the spread spectrum SNR
is 0 dB meaning the noise power is equal to the signal power. If you
spread to 200 kHz bandwidth, the processing gain is 13 dB, resulting in
a spread SNR of -3 dB, and the noise power is twice as strong as the
signal. So the signal is below the noise floor, but when you despread,
the original 10 dB SNR is recovered. Processing gains as high as 30 dB
have been achieved in practice.

The reason spread spectrum signals are able to "penetrate walls" is no different than any other signal, since you can obviously use your AM or FM radio indoors. However, spread spectrum techniques do afford an advantage in wireless LAN system due to resistance to a phenomenon called multipath fade. This is an effect you may have noticed while listening to FM radio in a car. Occasionally the signal drops out, and this is sometimes due to fades when the received signal arrives via more than one path due to reflections off of buildings, etc, causing destructive interference. Multipath interference is usually manifested as narrow notches in the spectrum. Spreads spectrum signals, being wideband in nature, have an inherent advantage since a much smaller part of the signal is affected by these notches. Also, the "coding" used for spread spectrum signals causes long multipath delays to be uncorrelated, that is, they won't affect the direct path.

Hope this helps

3813. Index Labs QRP Radio

Newsgroup: rec.radio.amateur.misc
Date: 1995-12-16 00:00:00 UTC
From: malman@poblano.near.net
Message-ID: <malman.819170947@poblano.near.net>
Source record: 233748

Group,

Has anyone tried the "QRP PLUS" TXcvr from Index Labs? It looks like it
might be a nice QRP rig, but I would like to hear from other QRP'ers
re the RCVR quality. On TX, 5 watts seems about right.

I called Index Labs, and they sent me the manual. The manual is nothing to
write home about - and makes most Asian HT manuals look like the Rosetta Stone.

Comments, Please!

You call that chutzpah? Try subscribing to SAIL magazine. I got three
(3) "special" renewal offers before I got my first issue! So far, my
renewal offers have outnumbered my magazines 2 to 1 (not counting the 4

or 5 renewal offers in each magazine).

Wireless Institute of Australia (VK2) on Web

Hello all,

I'd like to invite all World Wide Web "surfers" to check out the Web page of the Wireless Institute of Australia (New South Wales Division).

The WIA is the only internationally recognised organisation representing the interests of Radio Amateurs in Australia, and the New South Wales (VK2) Division's Web page is located at:

http://sydney.dialix.oz.au/~wiansw/

The page contains information about the WIA (of course!), and various related topics, such as contact lists for clubs, and hot links to the SMA (the regulatory body in Oz), IPS Radio and Space Services (who provide us with those propagation reports), and links to 300+ other Amateur sites world wide.

You'll also find information about VK2WI, the Division's broadcast station, including transmission schedules, a list of upcoming events on the Australian Amateur Radio calendar, the Internet Australian Radio Amateur Frequently Asked Questions (FAQ) list, and a section for overseas Amateurs who are planning to visit Australia.

(Oh, and also info about how you can win an ICOM IC-706)

The pages are still under development, so there are some gaps here and there (I'm waiting for updated contact info from the radio clubs, for example), but these will be filled in the near future.

73 Richard VK2SKY
for the Wireless Institute of Australia (New South Wales Division)

PS: On packet, you may encounter some abusive comments by Julie Kentwell VK2XBR/VK2ISI, who has taken exception to the Division establishing this Web page. Without having seen it, he has claimed that it contains lies, though about whom or what he hasn't said. Please disregard the histrionics of this person, who is regarded by many VK Amateurs as a raving lunatic.

I LIVE in OKC, and I buy from them regularly. For the most part
they're nice guys, and they seem to work hard to take care of their
customers. I've made the same discovery, i.e., they're cheaper than
most of the other mail order places. Give them a try, I don't think
you'll be disappointed. Tell them KC5KBC/John gave them a thumb's up!

73!

>receive mode (am, (wide/narrow) fm, lsb, usb, etc).
>I also would like to be able to save to disk the digitized audio output
>from the radio.

Your best bet is probably not to look for an adapter card, but for a
synthesized-frequency reciever that can be controlled via a standard
RS232 port. If you want to digitize the audio, feed the output of that
into a soundcard and record away. That combination is more likely to
be available, doesn't require anything beyond standard device drivers,
is probably more versitile in the long run (you can run the radio even when
not connected to a PC), and so on...

Warning: Digitized audio burns huge amounts of disk space very quickly.
Unless you've got gigabytes and/or are only capturing VERY short samples,
I suspect that audio tape is a better solution.
